

Contents

<i>Foreword</i>	<i>xxi</i>
<i>Introduction</i>	<i>xxiii</i>

Chapter 1 • Understanding BIM: From the Basics to Advanced Realities 1

Identifying the Advantages of Building Information Modeling	1
A Brief History of Design and Documentation	1
Building Information Modeling	2
BIM and Process Change	4
Revit Encourages Creativity	6
Every Element in Revit Has Properties	6
Elements Interact with Other Elements—All the Time	7
Duplicating Views Takes Two Clicks	7
Revit Fosters Problem Solving	8
Revit Lets You Leverage Other Tools to Support Your Workflow	8
Revit Allows You to Draft	9
The Family Editor Is a Powerful Tool	9
Revit Does Away with Layers and X-References	10
BIM Is More Than a Technology Approach: It's a Change in Process	10
Revit Is Relatively New Technology	12
Where Can You Go from Here?	12
The Bottom Line	14

Chapter 2 • Revit Fundamentals 15

Understanding Revit Parametric Elements	15
Model Categories	17
Annotation Categories	18
Subcategories	19
Imported Categories/Subcategories	20
Views	21
Type and Instance Parameters	21
Bidirectional Relationships	22
Constraints	24
Revit Families	25
Overriding the Representation of Elements	31
Working with the Revit User Interface	33
The View Window	34
View Controls	34
The Design Bar	34
The Options Bar	36
Toolbars	36
The Project Browser	36

Using the Project Browser.....	37
Views.....	37
Customizing the Browser Organization.....	40
Sheets.....	42
Families.....	42
Links.....	43
Groups.....	43
Navigating Views and View Properties.....	43
Floor Plans.....	44
Creating a Plan View Using View Range and a Plan Region.....	50
Sections.....	55
Elevations.....	57
3D Views.....	60
The Bottom Line.....	63
Chapter 3 • Know Your Editing Tools	65
Selecting, Changing, and Replacing Elements.....	65
Selection.....	65
Copying and Pasting.....	67
Create Similar.....	69
Editing Elements Interactively.....	69
Moving Elements.....	69
Copy.....	72
Rotating and Mirroring Elements.....	72
Arraying Elements.....	75
Resizing Elements.....	77
Aligning Elements.....	77
Trimming and Extending Lines and Walls.....	78
Splitting Lines and Walls.....	79
Offsetting Lines and Walls.....	80
Keeping Elements from Moving.....	80
Exploring Other Handy EditingTools.....	81
Join Geometry.....	82
Split Face and Paint.....	83
Keyboard Shortcuts (Accelerators).....	84
The Bottom Line.....	84
Chapter 4 • Setting Up Your Templates and Office Standards	87
Starting a Project with a Custom Template.....	87
Strategies for Making Templates.....	90
Settings for Graphic Consistency.....	90
Object Styles.....	90
Line Styles.....	92
Line Patterns.....	93

Creating a New Line Pattern	94
Materials	95
Fill Patterns (Hatches)	98
Dimension Styles	103
Text	108
Creating Custom Annotation Tags	110
View Tags	111
Customizing Element Tags	125
Keynotes and Textnotes	129
Creating Custom Titleblocks	131
Creating a Custom Titleblock with the Family Editor	132
Best Practices and Workarounds: Positioning Views on a Sheet	137
The Bottom Line	137
Chapter 5 • Customizing System Families and Project Settings	
in Your Template	139
Creating New Types of System Families	139
Wall Types	140
Floor and Roof Types	147
Ceiling Types	148
Stair Types	148
Door and Window Types	154
Using Types and Type Catalogs	154
Creating Family Types in the Project Environment	155
Creating Family Types in the Family Editor	155
Creating Family Types with Type Catalogs	155
Loading from a Type Catalog	157
Customizing Project Settings in Your Template	158
Graphic Overrides of Host Objects	158
Additional Global Project Settings to Consider When Making Your Templates	161
The Bottom Line	168
Chapter 6 • Modeling Principles in Revit I	169
Understanding the Basics of Modeling with Revit	169
Understanding Sketch-Based Design	170
Floors and Roofs	171
Sketching Rules of Thumb	173
Understanding Work Planes, Levels, Grids, Reference Planes, and Reference Lines	173
Work Planes	173
Levels	174
Grids	175
Reference Planes	176
Reference Lines	177
Work Planes in a Nutshell	179
The Bottom Line	189

Chapter 7 • Modeling Principles in Revit II	191
Understanding the Principles of Modeling in Revit.	191
Modeling with Five Basic Forms	195
Extrusion	196
Revolve	199
Sweep	202
Blend	209
Swept Blend	217
Combining Solids and Voids	217
Examples Showing Use of Voids	218
The Bottom Line	220
Chapter 8 • Concept Massing Studies	221
Understanding Massing Workflows	221
Massing Study Workflows.	224
Massing Tools	227
Creating a Mass Element	227
Visibility of Mass Elements	228
Starting a Conceptual Massing Study	229
Creating a Mass.	229
Placing a Mass Family	232
Creating a New Mass Family	234
Putting Theory into Practice: Making a Parametric Mass Family	235
Tagging and Scheduling Mass	245
Importing 3D Conceptual Models Created in Other Applications.	245
Rapid Prototyping and 3D Printing.	246
The Bottom Line	247
Chapter 9 • From Conceptual Mass to a Real Building	249
Understanding Conceptual Design and Early Studies	249
Getting Site Data and Building the Context.	250
Positioning Imported Files Relative to the Revit Project	252
Building the 3D Context	254
Program Check and Feasibility	256
Building Maker	258
Technical Details You Should Be Aware of When Scheduling Mass Elements	268
Using Imported Geometry from Other Applications for Massing	271
SketchUp	271
Rhinoceros	273
Autodesk Maya	275
Autodesk Inventor	277
Using Smart Relationships between Building Mass and the Underlying Mass	277
The Bottom Line	279

Chapter 10 • Working with Design Options	281
Using Revit Design Options	281
Enabling the Design Options Tool Set in the Toolbar	282
Design Option Sets	282
Adding Elements to a Design Option	283
Editing a Design Option	286
Displaying Design Options	288
Deciding on a Design Solution	289
Putting Design Options into Practice	290
Using Design Options with Parametric Design	294
Showing Quantities and Cost Schedules for Multiple Options	294
Working with Rooms and Design Options	295
The Bottom Line	298
Chapter 11 • Creating Custom 3D Content	301
Modeling Parametric 3D Families	301
Choosing the Right Family Template	302
Types of Families	304
Family Categories and Parameters	314
Nesting One Family into Another	316
Scheduling Nested Families	318
Linking Parameters	318
Linking Parameters (Conditional Visibility)	320
Building Relationships between Parameters with Formulas	321
Making a Parametric Array	321
Encoding Design Rules	322
Building a Parametric 3D Family	326
The Bottom Line	331
Chapter 12 • Extended Modeling Techniques—Walls	333
Using Advanced Modeling Techniques for Standard Walls	333
Wall Core	333
Layer Join Cleanup	335
Editing Wall Joins	336
Disjoining Walls	336
Stacked Walls	337
Adding Wall Articulation	339
Wall Wrapping	344
Sweeps and Reveals	344
Creating Custom In-Place Walls	351
Using Advanced Modeling Design Techniques for Curtain Walls	352
Designing a Curtain Wall	353
Curtain Panels	356
Curtain Wall Doors and Windows	357
Complex Curtain Wall Panels	358
The Bottom Line	358

Chapter 13 • Extended Modeling Techniques—Roofs and Slabs	361
Understanding the Various Roof Creation Methods	361
Footprint Roofs	362
Roof by Extrusion	367
In-Place Roofs	368
Sloped Glazing	370
Sloped Arrows.	375
Creating All Kinds of Roofs	376
Working with Advanced Roof and Slab Shape Editing	400
Sloped Roofs	401
Warped Surfaces	403
The Bottom Line	403
Chapter 14 • Extended Modeling Techniques—Railings and Fences	405
Working with Railings and Fences	405
Railings.	406
Subelements of the Railing Element and Principles of Railing Structure	407
Railing Construction	409
Setting Up Rail Structure	410
The Bottom Line	421
Chapter 15 • Presentation Techniques for Plans, Sections, and Elevations. . .	423
Using Shadows for Presentation Purposes	424
Analytical Drawings: Sun and Shadow Studies	425
Create Expressive Drawings with Shadows	428
Performance Considerations	429
Color-Coded Plans and Sections	429
Creating Presentation-Quality Plans and Sections	435
Coarse Scale Fill Patterns.	436
Graphic Overrides and View Templates	436
Creating Elevations That Convey Depth	438
Linework	439
Drafting Lines	440
True-Color Elevations	440
Elevations with Transparent Materials	442
Using Images in Elevation Views	442
The Bottom Line	443
Chapter 16 • Presenting Perspective Views	445
Creating Perspective Views	445
Silhouetted Edge Display	448
Creating Photorealistic Renderings	450
The Rendering Dialog Box	450
Materials.	457
Rendering Tips	461
Creating Animated Walkthroughs	461

Exporting the 3D Model for Use in Other Applications	462
The Bottom Line	463
Chapter 17 • Fine-Tuning Your Preliminary Design.	465
Quantifying Your Preliminary Designs	465
The Foundation Model	465
Calculating Area Plans	467
Room Tags	467
Area Plans	468
Making a Rentable Area Plan	471
Adding Areas and Tags	474
Creating Schedules	476
Making a Simple Schedule (Rentable Area)	478
Placing the Schedule on a Sheet	482
Additional Schedule Capabilities	485
Using Schedules for Preliminary Cost Estimates	486
Editing the Graphic Appearance of a Schedule	488
The Bottom Line	490
Chapter 18 • Evaluating Your Preliminary Design: Sustainability	491
Incorporating a Sustainable Approach from the Beginning	491
Preliminary Design Tools	492
The LEED Rating System	492
Using Revit to Create Sun Studies	493
Making a Sun Study	494
Animated Sun Studies	499
Tracking Recycled Materials and Other Sustainability Strategies Using Schedules	503
Recycled Materials	503
Window Surface Percentage vs. Room Area	505
Energy Analysis	506
The Bottom Line	511
Chapter 19 • Annotating Your Model	513
Annotating Views	513
Creating and Annotating Rooms	514
Room Separation Lines	518
Selecting Rooms	520
Rooms and Room Tags	521
Rooms in Section Views	522
Room Properties	522
Area and Volume Calculations	523
Using Schedule Keys	530
Creating a Schedule Key	530
Leveraging Tags	534
Loading Tags	534
Placing Tags	534

Changing a Tag Value	535
Tagging Untagged Elements	536
Understanding Project and Shared Parameters	538
Creating a Custom Project Parameter	539
Creating Shared Parameters	542
Shared Parameter Notes and Cautions	552
Adding Text and Keynotes	553
Text	553
Keynotes and Textnotes	554
Keynote Behavior and Editing	555
Keynote Filenaming Conventions	556
Keynote Settings	557
Adding Keynotes to a View	558
Keynote Legends	558
The Keynote Family	560
Predefining Keynotes	564
The Bottom Line	565
Chapter 20 • Developing the Design with Smart Workflows	567
Working with Repetitive Elements	567
Understanding How to Use Groups	568
Using Groups for Repetitive Rooms	568
Creating and Managing Groups	569
Creating and Placing Repetitive Units Using Groups	569
Adding Rooms to a Group	573
Nesting a Group into Another Group	575
Adding Detail Elements to Groups	576
Nesting a Group from a Previous Project	577
Making Variations to a Group Instance	578
Repeating Groups to Other Levels	581
Making the Group a Part of the Project	582
Editing a Group in a Separate File	583
Detail Groups	584
Best Practices for Grouping	585
Understanding the Principles of Links	585
Common Link Use Cases	587
Linking Files	589
Special Link Features	590
Controlling the Visibility of Links	591
Deciding Whether to Use Groups, Links, or Both	591
Final Considerations	592
The Bottom Line	593
Chapter 21 • Moving from Design to Detailed Documentation	595
Advancing the Design	595
Creating Drafting Views	596
Importing and Linking CAD Details	596
Linking vs. Importing	597

Creating 2D Detail Components	602
Detail Groups	602
Detail Components	602
Masking Regions	603
Creating a Repeating Detail Element	604
Detail Component Properties	605
Creating Custom Line Types Using Repeating Details	606
Miscellaneous Line Tools	607
Linework	611
Using Callouts	612
Adding Information to Your Details	613
Embellishing the Wall Section: The SIM (Similar) Condition	615
Adding Detail Components	617
Embellishing the Wall Section: The Model Details	621
The Bottom Line	634
Chapter 22 • Advanced Detailing Techniques	635
Creating 3D Details	635
3D Details: Enabling a Section Box in 3D View	637
3D Details: Orienting to View	637
Adding Annotations to the 3D Detail	640
Adding Detail Components to Families	640
Adding Details to a Window Family	641
Visibility Settings	645
Adding More Information Using Symbolic Lines	647
Reusing Details from Other Revit Projects	649
Exporting Details from Revit Projects	649
Importing Views into Revit Projects	650
The Bottom Line	654
Chapter 23 • Tracking Changes in Your Model	655
Adding Revisions to Your Project	655
Placing Revision Clouds	658
Tagging a Revision Cloud	660
BIM and Supplemental Drawings	662
Using Autodesk Design Review	663
The Design Review User Interface	664
Publishing to Design Review	666
Marking Up the Model Using Design Review	668
Importing a Design Review Markup	670
The Bottom Line	671
Chapter 24 • Worksharing	673
Setting Up a Project with Worksets	673
Understanding Worksharing Basics	675
Workset Organization	677
Moving Elements between Worksets	680

Managing Workflow with Worksets 681
 Creating a Central File 682
 Creating the Local File 682
 Saving Shared Work 683
 Loading Work from Other Team Members 684
 Understanding Element Ownership in Worksets 685
 Borrowing Elements 686
 Requesting Permission 686
 Granting Permission 688
 The Bottom Line 690

Appendices 691

Appendix A • The Bottom Line 693

Chapter 1: Understanding BIM: From the Basics to Advanced Realities 693
 Chapter 2: Revit Fundamentals 694
 Chapter 3: Know Your Editing Tools 695
 Chapter 4: Setting Up Your Templates and Office Standards 695
 Chapter 5: Customizing System Families and Project Settings in Your Template . . . 696
 Chapter 6: Modeling Principles in Revit I 697
 Chapter 7: Modeling Principles in Revit II 698
 Chapter 8: Concept Massing Studies 699
 Chapter 9: From Conceptual Mass to a Real Building 700
 Chapter 10: Working with Design Options 701
 Chapter 11: Creating Custom 3D Content 702
 Chapter 12: Extended Modeling Techniques—Walls 704
 Chapter 13: Extended Modeling Techniques—Roofs and Slabs 704
 Chapter 14: Extended Modeling Techniques—Railings and Fences 705
 Chapter 15: Presentation Techniques for Plans, Sections, and Elevations 706
 Chapter 16: Presenting Perspective Views 707
 Chapter 17: Fine-Tuning Your Preliminary Design 708
 Chapter 18: Evaluating Your Preliminary Design: Sustainability 709
 Chapter 19: Annotating Your Model 709
 Chapter 20: Developing the Design with Smart Workflows 711
 Chapter 21: Moving from Design to Detailed Documentation 712
 Chapter 22: Advanced Detailing Techniques 713
 Chapter 23: Tracking Changes in Your Model 714
 Chapter 24: Worksharing 714

Appendix B • Tips and Troubleshooting 717

Optimizing Performance 717
 Best Practices 719
 File Corruption 724
 Tips for Getting Started in Revit 726

Index 731
