### PART 1. AN INTRODUCTION TO STATISTICAL COMMUNICATION THEORY

<b>Chapter 1. Statistical Preliminaries</b> . . . . .	<b>3</b>
1.1. Introductory Remarks . . . . .	3
1.2. Probability Distributions and Distribution Densities . . . . .	5
Distribution Functions. Functions of a Random Variable. Discrete and Continuous Distributions. Distribution Densities. Mean Values and Moments. The Characteristic Function. Generalizations; Semi-invariants. Two Random Variables. Conditional Distributions; Mean Values and Moments. Statistical Independence. The Covariance. Multivariate Cases. Characteristic Functions and Semi-invariants. Generalizations.	
1.3. Description of Random Processes . . . . .	25
A Random Noise Process. Mathematical Description of a Random Process. Some Other Types of Process. Deterministic Processes. Signals and Noise. Stationarity and Nonstationarity. Examples of Stationary and Nonstationary Processes. Distribution Densities for Deterministic Processes.	
1.4. Further Classification of Random Processes . . . . .	42
Conditional Distribution Densities. The Purely Random Process. The Simple Markoff Process. The Smoluchowski Equation. Higher-order Processes and Projections.	
1.5. Time and Ensemble Averages . . . . .	48
Time Averages. Ensemble Averages.	
1.6. Ergodicity and Applications . . . . .	55
The Ergodic Theorem. Applications to Signal and Noise Ensembles.	
<b>Chapter 2. Operations on Ensembles</b> . . . . .	<b>65</b>
2.1. Operations on Ensembles . . . . .	65
Stochastic Convergence. Stochastic Differentiation and Integration. Remarks on General Transformations.	
2.2. Linear Systems; Representations . . . . .	78
Remarks on General Networks. The Transient State; Differential Equations and Solutions. The Weighting Function. The Transfer Function. System Functions and the Steady State. Narrowband Filters. Instantaneous Envelope, Phase, and Frequency, and the Analytic Signal.	
2.3. Nonlinear Systems; Representations . . . . .	105
Some Nonlinear Responses. Representation of Dynamic Characteristics with Zero Memory. Equivalent Contours.	
2.4. Objectives of the Present Study . . . . .	121

<b>Chapter 3. Spectra, Covariance, and Correlation Functions . . . . .</b>	<b>124</b>
3.1. The Autocorrelation Function . . . . .	124
Definition of the Autocorrelation Function. Ergodic Processes. Some Properties of $R_y^{(y)}(t)$ . The Discrete Case. Periodic Waves. Mixed Processes.	
3.2. The Intensity Spectrum . . . . .	137
Introductory Remarks. The Intensity Spectrum and the Wiener-Khinchine Theorem. Spectra, Correlation Functions, and Spectral Moments. Periodic Waves and Mixed Processes.	
3.3. Autovariance, Autocorrelation, and Spectra of Linearly Filtered Waves . . . . .	161
General Linear Filters (I). Narrowband Filters (I). General Linear Filters (II). Narrowband Filters (II). Approximations; Time Moments. Mixed Processes; Examples.	
3.4. Cross-correlation Functions, Spectra, and Generalizations . . . . .	184
Definitions and Properties. Linearly Filtered Waves. Examples. Truncated Waves. Nonstationary Processes.	
<b>Chapter 4. Sampling, Interpolation, and Random Pulse Trains . . . . .</b>	<b>200</b>
4.1. Discrete Sampling (Continuous Random Series). . . . .	201
4.2. Discrete Sampling (Interpolation). . . . .	206
The Sampled Wave. Properties of the Sampling Function $u_1(t)$ . Spectra and Covariance Functions. Generalizations.	
4.3. Random Pulse Trains with Periodic Structure . . . . .	218
Periodic Pulsed Sampling of a Random Wave. Pulse-time Modulation.	
4.4. Aperiodic Nonoverlapping Random Pulse Trains . . . . .	228
Spectrum and Covariance Functions. An Example.	
4.5. Overlapping Random Pulses . . . . .	233
Spectrum and Covariance Functions. Campbell's Theorem.	
<b>Chapter 5. Signals and Noise in Nonlinear Systems . . . . .</b>	<b>239</b>
5.1. Rectification with Zero-memory Devices . . . . .	240
The Second-moment Function $M_x(t)$ . The Spectrum. Narrowband Input Ensembles. Envelope and Phase Representations.	
5.2. Three Examples of Rectification . . . . .	256
Half-wave Linear Rectification of Normal Noise. Full-wave Square-law Rectification of a Carrier and Noise. A Simple Spectrum Analyzer.	
5.3. Noise Figures and Signal-to-Noise Ratios . . . . .	272
Linear-network Criteria; Noise Figures (I). Linear-network Criteria; Noise Figures (II). Criteria for Nonlinear Systems (I). Criteria for Nonlinear Systems (II). The Signal-to-Noise Ratio. Summary Remarks on Second-moment Criteria.	
<b>Chapter 6. An Introduction to Information Theory . . . . .</b>	<b>290</b>
6.1. Preliminary Remarks . . . . .	291
6.2. Measures of Information: The Discrete Case . . . . .	292
Uncertainty, Ignorance, and Information. Formulation. Structure of $\mathcal{U}$ . An Example. Properties of $\mathcal{I}(x x)$ , $\mathcal{I}(x y)$ .	
6.3. Entropy and Other Average Measures. Discrete Cases (Continued) . . . . .	300
Communication Entropy. Average Information Gains. Sequences and Sources.	
6.4. Measures of Information: Continuous Cases. . . . .	307
Entropy and Information Gains. Maximum Entropies. Sampling, Entropy Loss, and the Destruction of Information.	

6.5. Rates and Channel Capacity . . . . .	317
Discrete Noiseless Channel. Discrete Noisy Channel. The Continuous Noisy Channel. Continuous Noisy Channel with a Continuous Message Source. Discussion.	
PART 2. RANDOM NOISE PROCESSES	
<b>Chapter 7. The Normal Random Process: Gaussian Variates . . . . .</b>	<b>335</b>
7.1. The Normal Random Variable . . . . .	335
7.2. The Bivariate Normal Distribution . . . . .	337
7.3. The Multivariate Normal Distribution . . . . .	340
The Characteristic Function. Moments, Semi-invariants, and Statistical Independence.	
7.4. The Normal Random Process . . . . .	345
7.5. Some Properties of the Normal Process . . . . .	347
Additivity. Linear Transformations. Examples.	
7.6. Classification (Doob's Theorem) . . . . .	353
7.7. Unrestricted Random Walk and the Central-limit Theorem . . . . .	356
The Unrestricted Random Walk. Random Walk with a Large Number of Steps. The Central-limit Theorem.	
<b>Chapter 8. The Normal Random Process: Gaussian Functionals . . . . .</b>	<b>369</b>
8.1. Gaussian Functionals . . . . .	369
Derivatives of a Normal Process. Integrals of a Gauss Process. Joint Distributions.	
8.2. Orthogonal Expansions of a Random Process . . . . .	380
General Expansions. Orthogonal Expansion of a Random Process. Applications to the Gauss Process.	
8.3. Fourier-series Expansions . . . . .	390
<b>Chapter 9. Processes Derived from the Normal . . . . .</b>	<b>396</b>
9.1. Statistical Properties of the Envelope and Phase of Narrowband Normal Noise . . . . .	397
Distribution Densities and Moments of the Envelope. Moments and Distribution Densities of the Phase.	
9.2. Statistical Properties of Additive Narrowband Signal and Normal Noise Processes . . . . .	411
Statistics of the Envelope of Signal and Noise. Statistics of the Phase of Narrowband Signals and Normal Noise.	
9.3. Statistics of Signals and Broadband Normal Noise Processes . . . . .	421
9.4. Zero Crossings and Extrema of a Random Process . . . . .	426
Zero Crossings. Extrema. Remarks.	
<b>Chapter 10. The Equations of Langevin, Fokker-Planck, and Boltzmann . . . . .</b>	<b>438</b>
10.1. Formulation in Terms of a Stochastic Differential Equation: The Langevin Equation . . . . .	438
10.2. Some Examples Leading to a Diffusion Equation . . . . .	442
Random Walk of a Free Particle. Random Walk with a Harmonic Restoring Force.	
10.3. The Equation of Fokker-Planck and Its Relation to the Langevin Equation . . . . .	448
The Fokker-Planck Equation. The Moments $A_n(y)$ . The Equations of Boltzmann and Smoluchowski.	
10.4. The Gaussian Random Process . . . . .	455
Assumptions on the Force Term $F(t)$ . Two Examples. A Solution of the One-dimensional Fokker-Planck Equation. Moments.	

<b>Chapter 11. Thermal, Shot, and Impulse Noise . . . . .</b>	<b>467</b>
11.1. Thermal Noise . . . . .	467
The Intensity Spectrum (Kinetic Derivation). The Intensity Spectrum (Thermodynamical Argument). Generalizations. The Equipartition Theorem. Nonequilibrium Conditions. Probability Distributions for Thermal Noise. Comments.	
11.2. Impulse Noise . . . . .	490
A General Model. Poisson Noise. Example and Discussion.	
11.3. Temperature-limited Shot Noise . . . . .	498
Probability Densities. Waveform of the Induced Current. Moments and Spectra.	

### PART 3. APPLICATIONS TO SPECIAL SYSTEMS

<b>Chapter 12. Amplitude Modulation and Conversion . . . . .</b>	<b>513</b>
12.1. Methods of Modulation . . . . .	513
12.2. Covariance Functions and Intensity Spectra . . . . .	517
12.3. Conversion I. Preliminary Remarks . . . . .	525
12.4. Conversion II. Second-moment Theory . . . . .	530
<b>Chapter 13. Rectification of Amplitude-modulated Waves: Second-moment Theory . . . . .</b>	<b>539</b>
13.1. Rectification of Broad- and Narrowband Noise Processes . . . . .	539
Broadband Noise. Narrowband Noise.	
13.2. Rectification of Noise and a Sinusoidal Carrier . . . . .	547
Carrier and Broadband Noise. Carrier and Narrowband Noise.	
13.3. Detection of a Sinusoidally Modulated Carrier in Noise . . . . .	563
The Quadratic Detector ( $\nu = 2$ ). The Linear Detector ( $\nu = 1$ ).	
13.4. Other Rectification Problems . . . . .	574
Bias. Saturation. Full-wave Rectification. A Method of Residues.	
<b>Chapter 14. Phase and Frequency Modulation . . . . .</b>	<b>599</b>
14.1. Covariance Functions and Spectra . . . . .	601
Periodic Modulations. Random Modulations. Examples of Phase Modulation and Frequency Modulation by Stationary Normal Noise. Modulation Indices. Mixed Angle Modulation.	
14.2. Limiting Forms . . . . .	616
Low Modulation Indices. High Modulation Indices.	
14.3. Generalizations . . . . .	628
Simultaneous Amplitude and Angle Modulation. The Steady-state Effects of a Narrowband Linear Filter.	
<b>Chapter 15. Detection of Frequency-modulated Waves; Second-moment Theory . . . . .</b>	<b>636</b>
15.1. The FM Receiver . . . . .	63
RF and IF Receiver Stages. The Limiter. The Discriminator. Output of the Ideal Limiter-Discriminator. Elements.	
15.2. The Mean and Mean-square Output of an FM Receiver . . . . .	642
The Mean Output. The Mean-square Output.	
15.3. The Reception of Narrowband Frequency Modulation . . . . .	649
Signal-to-Noise Ratios. Signal-to-Noise Ratios (Narrowband Frequency Modulation). Narrowband Frequency Modulation vs. Amplitude Modulation.	
15.4. Covariance Function and Spectrum of the Output of the FM Receiver (General Theory) . . . . .	655

15.5. Special Cases for Broadband Frequency Modulation . . . . .	659
Signal Output; Arbitrary Limiting. Covariance Functions and Spectra with Strong Carriers and Moderate to Heavy Limiting. Covariance Functions and Spectra with Strong Carriers; Little or No Limiting. Threshold Signals. Noise Alone; Arbitrary Limiting. Noise and an Unmodulated Carrier. Signal-to-Noise Ratios (Broadband Frequency Modulation).	
<b>Chapter 16. Linear Measurements, Prediction, and Optimum Filtering . . . . .</b>	<b>679</b>
16.1. Linear Finite-time Measurements. . . . .	679
Statistical Errors. An Example: Mean Intensity of a Random Wave. Optimum Linear Finite-time Measurements; Noise Alone.	
16.2. Optimum Linear Prediction and Filtering . . . . .	697
Formulation. Noise Signals in Noise Backgrounds; The Theory of Wiener and Kolmogoroff. Some Examples. Extensions.	
16.3. Maximization of Signal-to-Noise Ratios—Matched Filters. . . . .	714
Maximization of $(S/N)_{out}$ . Examples. Matched Filters. Summary Remarks.	
<b>Chapter 17. Some Distribution Problems . . . . .</b>	<b>723</b>
17.1. Preliminary Results: Reduction of $\det(\mathbf{I} + \gamma\mathbf{G})$ . . . . .	724
The Eigenvalue Method. The Trace Method.	
17.2. Distribution Densities and Functionals . . . . .	733
Evaluation of Integrals. Moments and Semi-invariants. Probability Distribution of the Spectral Density of a Normal Process.	
17.3. Distribution Densities after Nonlinear Operations and Filtering . . . . .	753
First-order Distribution Densities Following a Quadratic Rectifier and Linear Filter. Further Examples. Concluding Remarks.	

#### PART 4. A STATISTICAL THEORY OF RECEPTION

<b>Chapter 18. Reception as a Decision Problem . . . . .</b>	<b>773</b>
18.1. Introduction . . . . .	774
18.2. Signal Detection and Extraction . . . . .	776
Detection. Types of Extraction. Other Reception Problems.	
18.3. The Reception Situation in General Terms . . . . .	782
Assumptions. The Decision Rule. The Decision Problem. The Generic Similarity of Detection and Extraction.	
18.4. System Evaluation . . . . .	787
Evaluation Functions. System Comparisons and Error Probabilities. Optimization: Bayes Systems. Optimization: Minimax Systems.	
18.5. A Summary of Basic Definitions and Principal Theorems. . . . .	795
Some General Properties of Optimum Decision Rules. Definitions Principal Theorems. Remarks.	
<b>Chapter 19. Binary Detection Systems Minimizing Average Risk. General Theory . . . . .</b>	<b>801</b>
19.1. Formulation . . . . .	801
The Average Risk. Optimum Detection. Some Further Properties of the Bayes Detection Rule.	
19.2. Special Optimum Detection Systems . . . . .	807
The Neyman-Pearson Detection System. The Ideal Observer Detection System. Minimax Detection Rule.	

19.3. Evaluation of Performance . . . . .	812
Error Probabilities; Optimum Systems. Error Probabilities; Suboptimum Systems. Decision Curves and System Comparisons.	
19.4. Structure; Threshold Detection . . . . .	818
Discrete Sampling. Continuous Sampling. General Remarks on Optimum Threshold Detection.	
<b>Chapter 20. Binary Detection Systems Minimizing Average Risk. Examples . . . . .</b>	<b>834</b>
20.1. Threshold Structure I. Discrete Sampling . . . . .	835
Coherent Detection. Incoherent Detection I. General Signals. Incoherent Detection II. Narrowband Signals.	
20.2. Threshold Structure II. Continuous Sampling. . . . .	849
Coherent Detection. Incoherent Detection I. General Signals. Incoherent Detection II. Narrowband Signals. Bayes Matched Filters.	
20.3. System Evaluation: Error Probabilities and Average Risk. . . . .	870
Optimum Threshold Systems. A Suboptimum System. Information Loss in Binary Detection. General Remarks.	
20.4. Examples . . . . .	889
Coherent Detection (Optimum Simple-alternative Cases). Coherent Detection (Suboptimum Simple-alternative Cases). Optimum Incoherent Detection (A Simple Radar Problem). A Simple Suboptimum Radar System (Incoherent Detection). Optimum Incoherent Detection (A Communication Problem). A General Radar Detection Problem. Stochastic Signals in Normal Noise. Remarks.	
<b>Chapter 21. Extraction Systems Minimizing Average Risk; Signal Analysis . . . . .</b>	<b>940</b>
21.1. Some Results of Classical Estimation Theory . . . . .	941
Estimates, Estimators, and the Cramér-Rao Inequality. Maximum Likelihood Estimation. Three Examples of Signal Extraction by Maximum Likelihood.	
21.2. Decision-theory Formulation . . . . .	959
Bayes Extraction with a Simple Cost Function. Bayes Extraction with a Quadratic Cost Function. Other Cost Functions. Information Loss in Extraction. Structure, System Comparisons, and Distributions.	
21.3. Estimation of Amplitude (Deterministic Signals and Normal Noise) . . . . .	979
Coherent Estimation of Signal Amplitude (Quadratic Cost Function). Incoherent Estimation of Signal Amplitude (Quadratic Cost Function). Incoherent Estimation of Signal Amplitude (Simple Cost Function).	
21.4. Waveform Estimation (Stochastic Signals) . . . . .	994
Normal Noise Signals in Normal Noise (Quadratic Cost Function). Smoothing and Prediction (Gaussian Signal and Quadratic Cost Functions). Minimax Smoothing and Prediction of Deterministic Signals (Quadratic Cost Functions).	
21.5. Remarks . . . . .	1004
<b>Chapter 22. Information Measures in Reception . . . . .</b>	<b>1008</b>
22.1. Information and Sufficiency . . . . .	1008
Sufficient Statistics. Information Measures.	
22.2. Information-loss Criterion for Detection . . . . .	1013
Equivocation of Binary Detectors. Detectors That Minimize Equivocation.	

<b>22.3. Information-loss Criterion for Extraction.</b>	1019
Average Information Loss and Its Extrema in Extraction. Minimax and Minimum Equivocation Extraction. Remarks on Maximum Likelihood Extractors.	
<b>Chapter 23. Generalizations and Extensions</b>	<b>1024</b>
<b>23.1. Multiple-alternative Detection and Estimation</b>	<b>1024</b>
Detection. Detection with Decision Rejection. Multiple Estimation.	
<b>23.2. Cost Coding: Joint Optimization of Transmission and Reception by Choice of Signal Waveform</b>	<b>1046</b>
Single Signals in Noise (Detection and Extraction). Detection of $S_2$ versus $S_1$ in Noise.	
<b>23.3. Relations to Game Theory</b>	<b>1057</b>
Game Theory.	
<b>23.4. A Critique of the Decision-theory Approach</b>	<b>1060</b>
<b>23.5. Some Future Problems</b>	<b>1067</b>
<b>Appendix 1. Special Functions and Integrals</b>	<b>1071</b>
A.1.1. The Error Function and Its Derivatives	1071
A.1.2. The Confluent Hypergeometric Function	1073
A.1.3. The Gaussian Hypergeometric Function	1076
A.1.4. Auxiliary Relations.	1077
A.1.5. Some Special Integrals.	1079
<b>Appendix 2. Solutions of Selected Integral Equations</b>	<b>1082</b>
A.2.1. Introduction.	1082
A.2.2. Homogeneous Integral Equations with Rational Kernels	1085
A.2.3. Inhomogeneous Equations with Rational Kernels	1086
A.2.4. Examples	1091
Example 1: The <i>RC</i> Kernel. Example 2: The <i>LRC</i> Kernel. Example 3: Mixed Kernels; <i>RC</i> Kernels and White Noise. Example 4: A Mixed Kernel, with White Noise.
