Foreword	ix
Preface.	xi
Introduction.	xxxiii

Part I: SUSE Linux Basics **1**

Chapter 1: Installing SUSE 10	3
Selecting Your Installation Method.	3
Starting Your Installation	5
Selecting Boot Options	6
Configuring Language Settings	9
Media Check.	10
Customizing the Installation.	11
Selecting Your Desktop Environment	11
Installation Overview	12
Customizing Your Installation	12
Partitioning Your Disks	14
Resizing Existing Operating System Partitions	16
Primary and Extended Partitions	17
Defining Filesystems	18
Selecting Software for Installation	23
Selecting a Boot Loader	25
Changing the Default Runlevel	27
Running the Installation	28
Configuring Your Root Password.	30
Configuring Your Network Access	30
Testing Your Connection and Online Updates	34
Configuring Your Modem	35
ISDN and ADSL Connections	36
Adding a New User.	37
SuSEconfig.	38
Reviewing the Release Notes	39
Configuring Your Hardware	40
Completing Installation	43

Chapter 2: Linux Fundamentals	47
Command Line 101: The Shell	48
Commonly Used Shell Features.	48
Advanced Shell Features	49
Getting Help for Linux Commands	55
Working with Files and Directories	55
Listing Files	56
Copying Files	56
Moving and Renaming Files	57
Deleting Files and Directories.	57
Changing Directories.	58
Making Directories	58
Removing Directories	58
Making Links to Files or Directories	58
Concatenating Files	59
Viewing Files with more and less	59
Viewing the Start or End of Files	60
Searching Files with grep	60
Finding Files with find and locate	61
Editing Text with vi and emacs	61
Common Administrative Tasks	62
Basic User and Group Concepts	62
Creating Users and Groups	63
Working with File Ownership and Permissions.	64
Configuring User Preferences	68
Mounting and Unmounting Filesystems.	69
Working with Software Packages	70
Checking What's Installed.	70
Examining RPM Packages	71
Extracting Files from Packages	71
Working with Source RPMs	72
Compiling Source Packages	73
Connecting over the Network	73
Backing Up, Restoring, and Archiving Files	75
Creating and Reading Simple Archives	75
Creating an ISO Image to Burn to CD.	76
Chapter 3: Partitions, Filesystems, and Files	77
Partitions.	78
Types of Partitions	78
Creating Partitions	80
Updating a Disk's Partition Table.	85
Changing Partition Types	86
Filesystems	86
EXT2	88
EXT3	88
ReiserFS	89
JFS	89

XFS	90
VFAT/NTFS	90
Creating Filesystems	91
Creating an EXT2 Filesystem	92
Creating an EXT3 Filesystem	93
Upgrading an EXT2 Filesystem to an EXT3 Filesystem	94
Creating a ReiserFS Filesystem	95
Filesystem Benchmarks	97
Mounting Filesystems	98
Mount Options	100
Mounting Filesystems Automatically	104
Unmounting Filesystems	105

Part II: The SUSE System

107

Chapter 4: Booting the System. 109

Booting Concepts	109
Runlevels	113
Switching Runlevels Manually	114
Using chkconfig to Control Runlevels	117
Customizing Runlevels for Different Types of Systems	118
Boot Managers	119
LILO	119
GRUB	122
Dual Booting	124
Installing Windows and Linux on a New System	124
Installing Linux on an Existing Windows System	125
Manually Partitioning an Existing Windows System	126
Sharing Data on Windows and Linux Partitions	128
Troubleshooting Booting	130
Fixing Boot Problems Using Runlevels	130
The SUSE Rescue System	131

Chapter 5: Documentation 135

Finding Help on Your SUSE System	135
The SUSE Manuals	135
Man Pages	136
Info Pages	141
The SUSE Help Center	141
/usr/share/doc/packages/	142
Other Documentation Packages	143
Linux Documentation Project Resources	143
FAQs	144
HOWTOs	145
Linux Documentation Project Guides	145
The SUSE Books Package	147

Finding Help Online	147
The SUSE Portal	148
SUSE Public Mailing Lists	149
The Unofficial SUSE FAQ	149
Other Unofficial SUSE Help Sites	149
Other SUSE Documents	149
SUSE Linux OpenExchange Server and OPEN-XCHANGE Web Sites.	150
Topic-Specific Sites	150
Finding Software	152
IBM	152
Other Distributions	153
News Sites	153
IRC	153
Finding Further Information	153
Chapter 6: Understanding Your Linux Network	155
Internet 101.	156
TCP/IP.	157
The ISO OSI Model	157
The DoD Model	161
IP Addresses.	162
Routing	169
And Breathe	170
Chapter 7: Logging	171
Why Log?	171
The Files in /var/log.	172
Logging with syslog	173
Logging with syslog-ng	176
The Log Source	178
The Filter.	179
The Log Destination	179
The Log Definition — Tying It All Together	180
Future Directions for Linux Logging.	180
Managing Your Logs with logrotate	181
Analyzing Your Logs with logcheck	183
Using Webalizer	186
Reading Log Files	187
Chapter 8: The X Window System	189
X Window System Concepts	190
Window Managers	190
KDE and GNOME	191
Configuring X.	192
Getting Hardware Information.	193
Using sax2	193
Framebuffer Graphics	195
Accessing Framebuffer Graphics after Installation	196

If X Still Doesn't Start	197
Switching Resolutions	197
Copy and Paste in X	197
User Preferences in X.	198
Using X Remotely	198
Diskless X Terminals	203
KDE	204
Konqueror	205
The KDE Control Center	207
KDE Applications	208
GNOME	209
Nautilus	211
Epiphany	211
Evolution	211
Gnucash	211
AbiWord	211
Gnumeric.	212
Other Window Managers	212
MWM and FVWM2	213
Blackbox	213
IceWM	214
XFCE	214
Window Maker	215
FVWM.	215
Building Your Own X Applications	216
Development Requirements for X Applications.	216
Building Fluxbox	216
Using Fluxbox	218
Wrapping Up	220

Chapter 9: Configuring the System with YaST 221

YaST Modules	223
Configuring Installation Sources	226
Creating and Using Boot and Rescue Floppies	228
Setting Up Proxy Settings	229
Using NTP Time Services	230
Printer Configuration	231
Setting Up a Scanner	238
Boot Loader Configuration	238
Setting Up SCPM	241
Runlevel Editor	244
Configuring DHCP	246
Users and Groups	246
Adding or Editing Users	246
Adding or Editing Groups	249
Installing Additional Software with YaST	250
YOU — The YaST Online Update	253
YOU on SUSE Professional and on SLES	253
susewatcher	253

The YaST Online Update Module	254
YOU Dangers	256
The YaST Installation Server Module	256
Setting Up an Installation Server	257
Installing from the Installation Server	260
Autoinstallation — AutoYaST	260
Principles	260
Mode of Operation	261
The YaST Autoinstallation Module	261
Using Pre-Install, chroot, and Post-Install scripts	264
Further Information.	265

Part III: Using the Command Line in SUSE Linux 267

Chapter 10: Text Manipulation. 269

Reading Lines from Files	270
cat.	270
tac.	272
zcat	272
head	272
tail.	272
expand	273
nl	273
uniq.	274
sort	275
Extracting Lines from Files	275
grep	275
zgrep	278
grepmail	278
sgrep	279
split	280
csplit	280
Working with Fields from Text Files	282
cut	282
paste	282
join	283
awk	284
Getting Statistics about Text Files with wc	286
Replacing Text	286
sed	286
tr	288
dos2unix and unix2dos.	290
Formatting Text Files for Viewing and Printing	290
pr	290
fold	291

fmt	291
groff -Tascii	291
a2ps.	292
enscript	292
Comparing Files	293
cmp	293
diff and patch	293
Getting Text out of Other File Formats	295
antiword	295
ps2ascii.	296
ps2pdf	296
dvi2tty	296
detex	296
acroread and xpdf	297
html2text.	297
strings	297
Chapter 11: Text Editors.	299
The Politics.	300
vi/vim	300
Using Command Mode	302
Moving Around the Text	302
Deleting Text.	304
Copying and Pasting	307
Inserting and Saving Files	308
Searching and Replacing	309
Using the vim Initialization File	310
Exiting vim	310
emacs	311
What to Install.	311
Starting emacs.	312
Controlling emacs.	313
Using Word Completion	315
Using Command Completion and History	316
emacs Modes	316
Using the Calendar	318
Customizing emacs	318
More Information	322
Chapter 12: Working with Packages	323
Binary RPMs	324
Installing an RPM	324
Querying RPM Packages	326
Removing Installed Packages	328
Verifying an RPM	329

Creating an RPM	331
Distribution RPMS	331
Source Code	331
The RPM Environment	333
The Spec File	333
Compiling an RPM from the Spec File	339
Checking the Finished RPM	341
Chapter 13: Working with Files	343
Listing, Copying, and Moving Files	343
The Command-Line Tools	343
File Managers	348
Finding Files	350
Using find	350
Using locate	350
Using Konqueror to Find Files	351
Finding Files in GNOME	351
Finding Files in mc	352
Looking at Files and File Types	353
The file Command	353
strings, ghex2, khxedit, and antiword	354
Viewing and Opening Different File Types and Formats	355
Compressing Files	362
Working with Archives	363
Working with tar Archives	364
Working with cpio Archives	366
Working with zip Archives	367
Unpacking RPM Packages	367
Using pax	367
Using ark	368
Files Attributes and ACLs	369
File Attributes	369
File ACLs	370
Chapter 14: Working with the System	373
System Rescue and Repair	373
Booting from the Hard Disk with Special Boot Parameters	374
Booting into the Rescue System	374
Booting into YaST System Repair Mode	375
Working with Partitions	378
Partitioning Examples	380
Making a Filesystem	384
Working with DVDs, CDs, and Floppies	385
Creating and Using Images of Existing Disks	385
Creating and Using New Disk Images	387
Creating ISO CD and DVD Images	388

Burning CDs from the Command Line	389
Burning CDs and DVDs Using k3b.	389
Webmin	391
Contacting a Running Webmin Process	391
Webmin and YaST	392
Automating Tasks	395
Shell Aliases	395
Writing Shell Scripts	396
Scripting Languages	405
Chapter 15: Linux Networking	411
Configuring an IP Network	411
ifconfig	412
Setting Up Your Routes.	415
Using iproute	419
The Wonderful World of ARP.	422
Taking Part in an IPX Network	423
Network Tools	424
Using Telnet	425
Using SSH	427
rsync	432
wget.	433
Network Troubleshooting	434
ping	434
traceroute	435
Wireless Networking	436
ndiswrapper	437
Configuring Your Wireless Network	439
Bluetooth	440

Part IV: Implementing Network Services in SUSE Linux

443

Chapter 16: Setting Up a Web Site with the Apache Web Server.	445
Configuring Apache	447
Global Directives	448
Main Server	450
Virtual Hosts.	452
Security	453
Setting Up User Access.	454
Setting Up Group Access.	455
The Common Gateway Interface.	456
Creating Dynamic Content with PHP	459

Chapter 17: Mail Servers – Postfix, Sendmail, Qpopper, and Cyrus.	463
How Mail Is Sent and Received	464
Postfix.	465
Postfix Configuration	466
Postfix Terminology and Use	473
Stopping Spam	478
sendmail	479
Installing sendmail	480
Configuring sendmail.	481
Starting sendmail	485
Getting More Information about sendmail.	486
Qpopper	486
Fetchmail	488
Cyrus IMAPD	489
Configuring the Cyrus User	489
Adding Users to Cyrus	490
Creating a Shared Mailbox.	490
Integrating Cyrus and Postfix	492
Setting an Alias for Root’s Mail in Cyrus	492
Choosing a Mail Client	493
The Command-Line Clients	493
The Graphical Mail Clients.	494
Mail Systems on Linux	494
Chapter 18: Setting Up Windows Interoperability with Samba	495
A Bit of Background	496
Setting Up and Using a Samba Client	497
Configuring a Samba Client	497
Browsing Available Windows Resources.	501
Mounting a Shared Windows Drive	503
Using a Windows Printer from Linux	505
Setting Up a Samba Server	508
Creating and Managing the Samba Password File	516
Working with the Winbind Daemon	517
Command-Line Utilities for Samba	519
The Samba Configuration File	520
Samba Client and Server Packages	521
Samba-Related Packages in SUSE Linux	522
When Samba-Related Packages Are Installed	522
Installing Samba Packages without a Graphical Interface	523
Installing Samba Packages	524

Chapter 19: Setting Up Printing with CUPS	527
Setting Up a Locally Connected Printer.	529
Printers Not Listed by YaST	531
Unsupported Printers	532
Printing from Applications.	532
Printing from the Command Line	533
Canceling a Print Job from the Command Line	533
Setting Up a Simple Print Server on the Local Network	534
Setting Up a Windows Client to Print to the CUPS Server	537
Printing from Linux to Other Types of Remote Printers	537
Using the CUPS Web Interface.	538
The CUPS Command-Line Tools and Configuration Files	541
The CUPS Logs	543
Other Tools	544
Documentation.	544
CUPS Online Documentation	545
The CUPS Book	545
SUSE Printing Documentation.	545
IPP Documentation	545
Chapter 20: Configuring and Using DHCP Services	547
What Is DHCP?	548
SUSE DHCP Server Packages	550
Setting Up a DHCP Server Using YaST.	551
Using the YaST DHCP Server Wizard	551
Reconfiguring an Existing DHCP Server in YaST	556
Manually Configuring a DHCP Server	559
IP Address Ranges	560
Assigning a Default Gateway.	560
Configuring Name Services	560
Host Specification.	562
Defining Host Groups.	563
Specifying Leases	563
Other DHCP Options	564
Starting and Stopping DHCP Clients.	564
Troubleshooting DHCP Clients and Servers	565
Troubleshooting DHCP Clients	565
Troubleshooting DHCP Servers	566
Wrapping Up	568
Chapter 21: Configuring a DNS Server	569
Some DNS Theory	569
Top-Level Domains	570
How Does a DNS Search Work?	571
Caching.	572

Configuring BIND for Caching and Forwarding	572
Using dig	573
Using host	574
Examining Record Types	575
Working with Zones	576
The Start of Authority	576
The NS Entry	578
The Mail Exchanger.	578
The Address Record	579
The CNAME Record.	579
Adding the Zone to named.conf.	579
The Reverse Zone	580
Chapter 22: Working with NFS and NIS	583
Mounting NFS Filesystems	583
Mounting NFS Filesystems at Boot Time.	584
Using mount Options.	585
rcnfs start and rcnfs stop	586
YaST's NFS Client Module	586
The NFS Server.	587
The exports File.	588
The exportfs Command	591
The showmount Command	591
Problems with Mounting NFS Shares.	592
NFS Security Considerations	593
Using NIS for Authentication	593
Setting Up an NIS Server Using YaST.	594
Setting Up an NIS Server Manually	597
Configuring Clients for NIS.	599
Wrapping Up	601
Chapter 23: Running an FTP Server on SUSE	603
vsftpd as an Anonymous FTP Server	604
Setting Up User FTP with vsftpd.	608
Allowing Uploads	609
Using pure-ftpd	611
Further Information	612
Chapter 24: Implementing Firewalls in SUSE Linux	613
Why Use a Firewall?	614
Configuring a Firewall with iptables.	615
Implementing an iptables Firewall	617
Setting Your First Rules	619
Adding a Rule	620
The Order of Rules	621

Network Address Translation	622
Source NAT	622
Allowing the Packets to be Forwarded	624
Destination NAT	625
Redirecting Traffic	626
Allowing ICMP Traffic	626
Allowing Loopback	627
Logging Dropped Packets	628
Using SuSEfirewall2	628
What Next?	633

Chapter 25: Working with LDAP in SUSE. 635

What Is LDAP?	636
LDAP Objects	637
The Hierarchy	638
Implementing the LDAP Server	639
Configuring the Administrator	639
Testing the LDAP Server	640
Adding Information	641
Adding User Data to the LDAP Server	645
Pluggable Authentication Modules	649
Integrating LDAP into Linux	651
Setting the ACL on the LDAP Server	653
How Can LDAP Help You?	653

Chapter 26: Setting Up a Web Proxy with Squid 655

Getting Started with Squid on SUSE	656
User Authentication	659
Restricting Access by Hardware Address	661
The Squid Log	661
Using Squid as a Transparent Proxy	663
Using Cache Manager	664
Using squidGuard	664

Part V: SUSE Linux in the Enterprise 667

Chapter 27: Enterprise Architecture. 669

A Typical Organization	670
Where Can Linux Be Used?	671
I Know Where, but How?	672
Fulfilling Your Staff Requirements	673
Linux Enterprise Hardware: The Big Players	674
IBM	674
Hewlett-Packard	676

64-bit Platforms	676
Blade Technology	677
Putting It All Together	678
Where Do I Put the Services?	679
Storage Area Networks	683
Disaster Recovery	688
Chapter 28: Emulation and Virtualization	693
Emulation versus Virtualization	693
DOS Emulation Using dosemu and dosbox	695
dosemu	695
dosbox	696
Running Microsoft Windows Applications Using Wine	696
The bochs PC Emulator	698
Virtual Machines Using QEMU	699
Installing and Running QEMU	700
Building and Using the QEMU Accelerator	701
VMWare Virtual Machines	703
VMWare Workstation	703
Creating and Using Virtual Machines with Xen	706
Installing Xen	707
Creating Xen Virtual Machines Using YaST	708
Creating Xen Virtual Machines Manually	711
Starting, Stopping, and Interacting with Xen Virtual Machines	716
Automating Xen Domain Startup	718
More Information About Xen	719
User Mode Linux and FAUmachine	719
User Mode Linux Installation and Setup	719
FAUmachine Installation and Setup	720
Other Emulators	720
Summary	720
Chapter 29: The Kernel	723
Why You Probably Don't Need This Chapter	723
Why You Might Need This Chapter	724
SUSE Kernels and Vanilla Kernels	724
Kernel Version Numbers	724
The Binary Kernel Packages	725
What Kernel Am I Running?	726
Upgrading a Kernel Package	726
Kernel Configuration	726
Building the Kernel	732

Rebuilding the <code>km_*</code> Packages	734
The Kernel and Third-Party Software	735
Loading Kernel Modules	735
Kernel Parameters at Boot Time.	736
The Initial Ramdisk	737

Chapter 30: SUSE Linux OpenExchange Server 739

Licensing SLOX	740
Installing SLOX.	740
Starting the SLOX Installation	741
Configuring UnitedLinux	743
Configuring SLOX	748
The SLOX Architecture	750
PostgreSQL	750
OpenLDAP	751
Netline Servlets	751
Cyrus and Postfix	751
Administrating SLOX	752
Managing Users	754
Creating the User	754
Creating a Virtual Domain	757
Mapping a Virtual User to a Real User	758
Configuring the Postfix Subsystem	759
Enabling SMTP-AUTH.	760
Enabling Spam Prevention	760
Managing the Cyrus Subsystem	761
Managing Groups and Folders	762
Creating a Group of Users	762
Creating a Shared Folder	763
Checking System Resources	764
The User Perspective	765
Reading Your Mail.	766
The Calendar	768
Jobs (tasks)	769
Creating Documents	770
Creating a Note	771
Creating a New Contact	772
Viewing Your New Portal Page	773
Using the Outlook Connectors	774
iSLOX	774
oSLOX	775
Using oSLOX	775
Your First Synchronization	778
To SLOX or Not to SLOX?	782

Chapter 31: The Novell Open Enterprise Server.	783
OES components.	784
eDirectory	785
iManager	785
Linux User Management	785
eGuide	786
iFolder	786
iPrint	787
NetStorage	787
QuickFinder	787
Virtual Office	788
Novell Remote Manager	788
Novell Storage Services	789
Novell NCP server	789
Novell Samba server	789
Novell Cluster Services.	790
Obtaining OES	790
Installing OES	790
OES Licensing	793
Post-Installation Configuration of OES	793
What Next?	795
Further Information	796
Chapter 32: Business Desktop Linux: The Novell Linux Desktop.	797
The Technical Background	798
The Stubborn Applications.	799
Commercial Desktop Distributions	799
Other Approaches.	800
SLD and NLD	801
NLD Installation	802
Special Features of NLD	802
The Future of NLD	806
For More Information	806
What's on the DVD.	807
System Requirements	807
What's on the DVD	807
Troubleshooting	808
Customer Care	808
Index	809
GNU General Public License.	859
