Issue Editor's Notes 1
Lynn Davey

Executive Summary 7

Part One: Strategic Frame Analysis: Theoretical and Empirical Assumptions

1. The trouble with issues: The case for intentional framing 13
Susan Nall Bales

This theoretical framework suggests that intentional framing of youth issues can fundamentally shift Americans' understanding of how systems and policies can improve the lives of youth.

2. Strategic Frame Analysis: Providing the "evidence" for evidence-based communications 29
Tiffany Manuel, Lynn Davey

How can a multimethod, empirical approach to communications serve to improve public understanding and support for social problems?

Part Two: Research in Action

3. The family bubble, achievement gap, and development as competition: Media frames on youth 39
Moira O'Neil

Cognitive media content analysis identifies how the news media frame youth issues, mapping the public conversation writ large but also identifying the implicit understandings that mainstream media convey about youth.

4. Mapping cultural models and translating expert explanations of child development with simplifying models 51
Nathaniel Kendall-Taylor

Exploring the cultural models—or patterns of understanding—that people employ when reasoning about child and youth development is an essential step in identifying the framing strategies that will close the gap between expert and lay understandings.

5. From focus groups to peer discourse sessions: The evolution of a method to capture language, meaning, and negotiation 61
Tiffany Manuel, Nathaniel Kendall-Taylor
Peer discourse sessions are a specific application of focus group methodology used to explore how the public negotiates discourse about social problems.
6. Who says your frames are better than mine? Making the case for strategic framing by using the power of experimental research 71
Tiffany Manuel
Experimental manipulation of frame effects can distinguish effective from ineffective frame strategies and offer quantitative evidence of which frame elements do and do not improve public understanding of and policy support for social problems.

Part Three: Building the Field

7. From research to practice: Communications for social change 83
Lynn Davey
Research from the social-cognitive sciences and social movement literature provides the foundations of this approach to teaching evidence-based communications to the field of policy advocates and practitioners.
8. Framing in the field: A case study 91
Diane Benjamin
Examples are presented of successful framing practice by child and youth advocates who are transforming their communications strategies and improving their advocacy efforts.
9. Campaigning for children's oral health: A case study 97
Kate Vaughan
Coordinated media campaigns have the potential to increase public awareness and understanding of social problems. This case study of a campaign for children's oral health highlights the essential role of research-based message development in successful issue campaigning.
10. Strategic Framing Study Circles: Toward a gold standard of framing pedagogy 103
Jane Feinberg
Framing study circles with coalitions of issue advocates constitutes a best practice in teaching advocates to apply the science of framing to their communications efforts.
11. Embracing the long view: A funder's perspective on Strategic Frame Analysis 111
Jane Feinberg, Curt McPhail
One foundation shares its efforts to make strategic communications a core organizational competency.

Part Four: New Frontiers

12. Lessons from the story of early child development: Domain decisions and framing youth development 119
Susan Nall Bales, Franklin D. Gilliam Jr.

Evidence suggests that framing both early childhood and youth issues in terms of development is preferable to any of the alternatives offered to date (such as workforce, crime, education, or health).
