Preface XI

List of Contributors XIII

1 Fabrication of Microreactors Made from Metals and Ceramics 1

Juergen J. Brandner

- 1.1 Manufacturing Techniques for Metals 1
- 1.1.1 Etching 2
- 1.1.2 Machining 4
- 1.1.3 Generative Method: Selective Laser Melting (SLM) 6
- 1.1.4 Metal-Forming Techniques 7
- 1.1.5 Assembling and Bonding of Metal Microstructures 9
- 1.2 Ceramic Devices 12
- 1.2.1 Joining and Sealing 14
- References 15

2 Fabrication and Assembling of Microreactors Made from Glass and Silicon 19

Thomas Frank

- 2.1 How Microreactors are Constructed 19
- 2.2 Glass as Material 20
- 2.3 Silicon as Material 22
- 2.4 The Structuring of Glass and Silicon 24
- 2.5 Structuring by Means of Masked Etching in Microsystems Technology 24
- 2.6 Etching Technologies 26
- 2.6.1 Anisotropic (Crystallographic) Wet Chemical Etching of Silicon (KOH) 27
- 2.6.2 Isotropic Wet Chemical Etching of Silicon 29
- 2.6.3 Anisotropic Dry Etching of Silicon 30
- 2.6.4 Isotropic Wet Chemical Etching of Silicon Glass 31
- 2.6.5 Photostructuring of Special Glass 32

2.7	Chip Removing Processing	34
2.7.1	Drilling, Diamond Lapping, Ultrasonic Lapping	34
2.7.2	Micropowder Blasting	35
2.7.3	Summary	37
2.8	Bonding Methods	38
2.8.1	Anodic Bonding of Glass and Silicon	38
2.8.2	Silicon Direct Bonding (Silicon Fusion Bonding)	38
2.8.3	Glass Fusion Bonding	39
2.9	Establishing Fluid Contact	39
2.10	Other Materials	41
	References	41
3	Properties and Use of Microreactors	43
	<i>David Barrow</i>	
3.1	Introduction	43
3.2	Physical Characteristics of Microreactors	44
3.2.1	Geometries	44
3.2.2	Constructional Materials and Their Properties	45
3.3	Fluid Flow and Delivery Regimes	46
3.3.1	Fluid Flow	46
3.3.2	Fluid Delivery	48
3.3.3	Mixing Mechanisms	49
3.4	Multifunctional Integration	50
3.5	Uses of Microreactors	50
3.5.1	Overview	50
3.5.2	Unstable Intermediates Fast and Exothermic Reactions	51
3.5.3	Precision Particle Manufacture	52
3.5.4	Wider Industrial Context	52
3.5.4.1	Sustainability Agenda	52
3.5.4.2	Point-of-Demand Synthesis	53
	References	54
4	Organic Chemistry in Microreactors	59
4.1	Homogeneous Reactions	59
	<i>Takahide Fukuyama, Md Taifur Rahman, Ilhyong Ryu</i>	
4.1.1	Acid-Promoted Reactions	59
4.1.2	Base-Promoted Reactions	62
4.1.3	Condensation Reactions	64
4.1.4	Metal-Catalyzed Reactions	68
4.1.5	Photochemical Reactions	70
4.1.6	Electrochemical Reactions	75
4.1.7	Miscellaneous	80
4.1.7.1	Swern Oxidation	80
4.1.7.2	Grignard Exchange Reaction	80
4.1.7.3	Lithium–Halogen Exchange Reaction	81

4.1.7.4	Phenyl Boronic Acid Synthesis	81
	References	82
4.2	Heterogeneous Reactions	84
	<i>Ian R. Baxendale, John J. Hayward, Steve Lanners, Steven V. Ley, Christopher D. Smith</i>	
4.2.1	Introduction	84
4.2.2	Concepts in Flow Mode Synthesis	85
4.2.3	Methods of Conducting Flow Chemistry	86
4.2.3.1	On-Bead Synthesis	86
4.2.3.2	Solution-Phase Synthesis	87
4.2.3.3	Library Synthesis in Flow	89
4.2.3.4	Heterocycle Synthesis	90
4.2.4	Introduction to Monoliths	93
4.2.5	Transition Metal Chemistry Under Flow Conditions	95
4.2.5.1	Reduction	95
4.2.5.2	Oxidation	99
4.2.5.3	Cross-Coupling Reactions	100
4.2.5.4	Olefin Metathesis	105
4.2.6	Enantioselective Reactions	107
4.2.6.1	Hydrolytic Kinetic Resolution	107
4.2.6.2	Organometallic Additions	108
4.2.6.3	Enantioselective Diels–Alder Reactions	109
4.2.6.4	Ene Reactions	110
4.2.6.5	Cyclopropanation	110
4.2.6.6	Asymmetric Conjugate Addition	111
4.2.6.7	β -Lactam Synthesis	111
4.2.6.8	Asymmetric Chlorination	112
4.2.7	Multistep Synthesis	113
4.2.8	Conclusions and Outlook	117
	References	118
4.3	Liquid–Liquid Biphasic Reactions	122
	<i>Batoul Ahmed-Omer, Thomas Wirth</i>	
4.3.1	Introduction	122
4.3.2	Background	123
4.3.3	Kinetics of Biphasic Systems	124
4.3.4	Biphasic Flow in Microchannels	125
4.3.5	Surface–Liquid and Liquid–Liquid Interactions	127
4.3.6	Liquid–Liquid Microsystems in Organic Synthesis	132
4.3.7	Conclusions and Outlook	137
	References	138
4.4	Gas–Liquid Reactions	139
	<i>Volker Hessel, Patrick Löb, Holger Löwe</i>	
4.4.1	Introduction	139
4.4.2	Contacting Principles and Microreactors	139
4.4.2.1	Contacting with Continuous Phases	139

4.4.2.2	Falling-Film Microreactor	140
4.4.2.3	Contact with Disperse Phases	146
4.4.3	Gas-Liquid Reactions	155
4.4.3.1	Direct Fluorination of Aromatics	155
4.4.3.2	Oxidations of Alcohols, Diols and Ketones with Fluorine	160
4.4.3.3	Photochlorination of Aromatic Isocyanates	161
4.4.3.4	Monochlorination of Acetic Acid	162
4.4.3.5	Sulfonation of Toluene	163
4.4.3.6	Photooxidation of α -Terpinene and Cyclopentadiene	165
4.4.3.7	Reactive Carbon Dioxide Absorption	167
4.4.4	Gas-Liquid-Solid Reactions	169
4.4.4.1	Cyclohexene Hydrogenation over Pt/Al ₂ O ₃	169
4.4.4.2	Hydrogenation of <i>p</i> -Nitrotoluene and Nitrobenzene over Pd/C and Pd/Al ₂ O ₃	170
4.4.4.3	Hydrogenation of α -Methylstyrene over Pd/C	172
4.4.4.4	Hydrogen Peroxide Formation from the Elements	173
4.4.5	Homogeneously Catalyzed Gas-Liquid Reactions	173
4.4.5.1	Asymmetric Hydrogenation of Cinnamic Acid Derivatives	173
4.4.5.2	Asymmetric Hydrogenation of Methylacetamidocinnamate	176
4.4.6	Other Applications	178
4.4.6.1	Segmented Gas-Liquid flow for Particle Synthesis	178
4.4.7	Conclusions and Outlook	178
	References	179
4.5	Bioorganic Reactions	183
	<i>Kaspar Koch, Floris P.J.T. Rutjes, Jan C.M. van Hest,</i>	
4.5.1	General Introduction	183
4.5.2	Diagnostic Applications	184
4.5.2.1	Protein and DNA Analysis	184
4.5.2.2	DNA Amplifications	188
4.5.2.3	Enzyme-Linked Immunoassays	189
4.5.2.4	Other Diagnostic Applications	192
4.5.3	Biocatalysis	193
4.5.3.1	Enzyme Kinetics in Microreactors	194
4.5.3.2	Biocatalyzed Synthesis in Microreactors	196
4.5.3.3	Complex Catalysis in Microbioreactors	204
4.5.4	Conclusions	205
	References	206
5	Industrial Microreactor Process Development up to Production	211
	<i>Volker Hessel, Patrick Löb, Holger Löwe</i>	
5.1	Mission Statement from Industry on Impact and Hurdles	211
5.2	Screening Studies in Laboratory	212
5.2.1	Peptide Synthesis	212
5.2.2	Hantzsch Synthesis	215
5.2.3	Knorr Synthesis	216

- 5.2.4 Enamine Synthesis 217
- 5.2.5 Aldol Reaction 218
- 5.2.6 Wittig Reaction 218
- 5.2.7 Polyethylene Formation 219
- 5.2.8 Diastereoselective Alkylation 220
- 5.2.9 Multistep Synthesis of a Radiolabeled Imaging Probe 221
- 5.3 Process Development at Laboratory Scale 223
 - 5.3.1 Nitration of Substituted Benzene Derivatives 223
 - 5.3.2 Phenyl Boronic Acid Synthesis 224
 - 5.3.3 Azo Pigment Yellow 12 Manufacture 226
 - 5.3.4 Desymmetrization of Thioureas 226
 - 5.3.5 Vitamin Precursor Synthesis 228
 - 5.3.6 Ester Hydrolysis to Produce an Alcohol 228
 - 5.3.7 Synthesis of Methylenecyclopentane 229
 - 5.3.8 Condensation of 2-Trimethylsilylethanol 229
 - 5.3.9 (*S*)-2-Acetyl Tetrahydrofuran Synthesis 229
 - 5.3.10 Synthesis of Intermediate for Quinolone Antibiotic Drug 230
 - 5.3.11 Domino Cycloadditions in Parallel Fashion 231
 - 5.3.12 Ciprofloxazin Multistep Synthesis 233
 - 5.3.13 Methyl Carbamate Synthesis 233
 - 5.3.14 Newman–Kwart Rearrangement 234
 - 5.3.15 Ring-Expansion Reaction of *N*-Boc-4-Piperidone 235
- 5.3.16 Grignard and Organolithium Reagents 236
- 5.4 Pilots Plants and Production 238
 - 5.4.1 Hydrogen Peroxide Synthesis 238
 - 5.4.2 Diverse Case Studies at Lonza 240
 - 5.4.3 Polyacrylate Formation 242
 - 5.4.4 Butyl Lithium-Based Alkylation Reactions 243
 - 5.4.5 German Project Cluster 2005 245
 - 5.4.6 Development for OLED Materials Production 246
 - 5.4.7 Development for Liquid/Liquid and Gas/Liquid Fine-Chemicals Production 246
 - 5.4.8 Development of Pharmaceutical Intermediates Production by Ozonolysis and Halogenation 247
 - 5.4.9 Industrial Photochemistry 250
 - 5.4.10 Development of Ionic Liquid Production 251
 - 5.4.11 Japanese Project Cluster 2002 251
 - 5.4.12 Pilot Plant for MMA Manufacture 252
 - 5.4.13 Grignard Exchange Reaction 253
 - 5.4.14 Halogen–Lithium Exchange Pilot Plant 254
 - 5.4.15 Swern–Moffat Oxidation Pilot Plant 256
 - 5.4.16 Yellow Nano Pigment Plant 257
 - 5.4.17 Polycondensation 257
 - 5.4.18 Friedel–Crafts Alkylation 259
 - 5.4.19 H₂O₂ Based Oxidation to 2-Methyl-1,4-Naphthoquinone 260

5.4.20	Direct Fluorination of Ethyl 3-Oxobutanoate	261
5.4.21	Propene Oxide Formation	262
5.4.22	Diverse Industrial Pilot-Oriented Involvements	264
5.4.23	Production of Polymer Intermediates	265
5.4.24	Synthesis of Diazo Pigments	266
5.4.25	Nitroglycerine Production	268
5.4.26	Fine-Chemical Production Process	269
5.4.27	Grignard-Based Enolate Formation	270
5.5	Challenges and Concerns	271
	References	272
