1 Investment Strategy	1
What is strategy?	1
What is investment strategy?	2
Planning to achieve the objective	4
1. Real and artificial liabilities	4
2. Mapping the liability cashflows	7
3. Total funding	9
4. The escalator factor	11
5. Putting it together	18
Conclusions	19
Summary	21
2 Multi Asset Class Investing	23
The asset allocation background	23
Potential problems in moving to a Multi Asset Class approach	25
The Yale Model	26
Higher returns as a goal, not peer group benchmarking	26
Liquidity	28
Diversification	29
Long-term returns	31

The Yale Model and MAC investing	32
Bonds	32
Quoted equities	34
How much should be allocated to each asset class?	34
How is the Yale Model currently allocated?	35
What does one look for in selecting an asset class?	37
Is there a sufficiently robust benchmark available for the asset class?	37
Conclusions	40
Summary	41
3 Risk	43
Introduction	43
The atheist cathedral	44
Risk and the capital asset pricing model	49
How ‘risk’ is used in practice	52
Arithmetical problems with beta	54
Conceptual problems with beta	59
Why beta and the CAPM are irrelevant	63
Summary	65
4 How to Define Risk	67
Risk and uncertainty	68
Risk and diversification in the artificial world	70
Risk in the real world: uncertainty and materiality	72
Towards a new definition of risk	74
Return risk	77
Capital risk	84
Summary	84
5 How to Calculate Risk	87
Phi calculations	87
Phi and beta	88
Compound return-based modelling	91
The future of risk analysis	95
Direct comparison of different asset classes	98
Other types of risk	100
Summary	102

6	Quoted Equity	103
	Active versus passive equities management	104
	Which indices shall we examine?	111
	What correlation is there between quoted markets?	112
	Correlation and the dollar investor	114
	Correlation and the sterling investor	117
	Return risk of quoted equities	118
	How to improve quoted equity returns	122
	Summary	129
7	Hedge Funds	131
	What is a hedge fund?	131
	Hedge fund investment strategies	134
	What benchmarks are available and which should we use?	138
	How do the various hedge fund strategies compare?	141
	What return risk is present in hedge funds?	143
	Does the index properly show potential portfolio returns?	146
	Hedge funds within the Yale portfolio	148
	What capital risk is present in hedge funds as an asset class?	151
	How are hedge fund returns correlated with those for quoted equity?	153
	Summary	154
8	Private Equity	155
	Venture capital	156
	Stage	157
	Sector	159
	Geography	161
	Vintage year versus annual returns	168
	Further complexities of private equity returns	170
	What return risk is present in private equity?	172
	What capital risk is present in private equity?	176
	What degree of correlation does it exhibit with quoted equity markets?	177
	How do we address the slow capital take-up issue?	177
	Summary	180

9	Property	183
	Investing in property	183
	Investing in property (real estate) directly	184
	Geography	184
	Sector	185
	Investing in property indirectly	188
	Quoted property companies	188
	Specialist quoted vehicles	188
	Private institutional funds (limited partnerships)	191
	What performance benchmarks should we use?	192
	What level of correlation exists with quoted equity returns?	192
	What levels of return risk and capital risk does UK property exhibit?	193
	How have returns varied by sector?	196
	Can property returns be improved by leverage?	199
	Analysing the possible effect of leverage on a property portfolio	203
	Summary	207
10	LDI and Portable Alpha: Rival Strategies?	209
	LIABILITY DRIVEN INVESTMENT	209
	What is ‘liability driven investment’?	209
	The differing positions of the pension plan and the employer	211
	How does liability matching help?	213
	Why liability matching does not work	215
	The pension plan as creditor	216
	The strategic dilemma	218
	Summary of LDI	220
	PORTABLE ALPHA	220
	The concept	221
	Problem 1: The traditional risk model	222
	Problem 2: Pure alpha	224
	Problem 3: Exactly what is being suggested?	224
	Problem 4: Alpha returns	226
	Summary of portable alpha	227
	Rival strategies?	228

11	Liquidity	231
	Creating artificial liquidity	232
	Why do institutional investors need liquidity, and how much liquidity do they need?	233
	Are so-called alternative assets really illiquid?	
	And, if so, just how illiquid?	236
	Hedge funds: Liquidity considerations	237
	Private equity: Liquidity issues	239
	Property: Liquidity issues	241
	Liquidity of so-called alternative assets	242
	Irrationality of liquidity concerns	243
	Summary	244
12	Portfolio Performance	245
	Cost-adjusted performance	247
	What returns will we use?	250
	Parameters of the model	251
	Relative performance	252
	What about rebalancing?	256
	Are private equity returns modelled realistically?	259
	Conclusions	263
	Appendix 1: Tables of Performance Figures	267
	Appendix 2: Investment Strategy for DC Schemes and Mature Pension Plans	273
	Index	285
