<b>Preface</b>	<b>xiii</b>
<b>Notation index</b>	<b>xvii</b>
<b>PART I THE DETERMINISTIC MODEL</b>	<b>1</b>
<b>1 Introduction and motivation</b>	<b>3</b>
1.1 Risk and insurance	3
1.2 Deterministic versus stochastic models	4
1.3 Finance and investments	5
1.4 Adequacy and equity	5
1.5 Reassessment	5
1.6 Conclusion	6
<b>2 The basic deterministic model</b>	<b>7</b>
2.1 Cashflows	7
2.2 An analogy with currencies	8
2.3 Discount functions	9
2.4 Calculating the discount function	11
2.5 Interest and discount rates	12
2.6 The constant interest case	12
2.7 Values and actuarial equivalence	13
2.8 The case of equal cashflows	17
2.9 Balances and reserves	18
2.10 Time shifting and the splitting identity	24
*2.11 Change of discount function	25
*2.12 Internal rate of return	26
2.13 Standard notation and terminology	28
2.14 Spreadsheet calculations	30
2.15 Notes and references	32
Exercises	32
<b>3 The life table</b>	<b>37</b>
3.1 Basic definitions	37
3.2 Probabilities	38

viii **Contents**

3.3	Constructing the life table from the values of $q_x$	39
3.4	Life expectancy	40
3.5	Choice of life tables	42
3.6	Standard notation and terminology	42
3.7	A sample table	43
3.8	Notes and references	43
	Exercises	43
<b>4</b>	<b>Life annuities</b>	<b>45</b>
4.1	Introduction	45
4.2	Calculating annuity premiums	46
4.3	The interest and survivorship discount function	48
4.4	Guaranteed payments	51
4.5	Deferred annuities with annual premiums	52
4.6	Some practical considerations	53
4.7	Standard notation and terminology	54
4.8	Spreadsheet calculations	55
	Exercises	56
<b>5</b>	<b>Life insurance</b>	<b>59</b>
5.1	Introduction	59
5.2	Calculating life insurance premiums	59
5.3	Types of life insurance	61
5.4	Combined benefits	62
5.5	Insurances viewed as annuities	65
5.6	Summary of formulas	66
5.7	A general insurance–annuity identity	66
5.8	Standard notation and terminology	68
5.9	Spreadsheet applications	70
	Exercises	70
<b>6</b>	<b>Insurance and annuity reserves</b>	<b>75</b>
6.1	Introduction to reserves	75
6.2	The general pattern of reserves	77
6.3	Recursion	78
6.4	Detailed analysis of an insurance or annuity contract	79
6.5	Bases for reserves	82
6.6	Nonforfeiture values	83
6.7	Policies involving a return of the reserve	84
6.8	Premium difference and paid-up formulas	85
6.9	Standard notation and terminology	87
6.10	Spreadsheet applications	89
	Exercises	90
<b>7</b>	<b>Fractional durations</b>	<b>95</b>
7.1	Introduction	95
7.2	Cashflows discounted with interest only	96
7.3	Life annuities paid $m$ thly	98

7.4	Immediate annuities	100
7.5	Approximation and computation	101
7.6	Fractional period premiums and reserves	103
7.7	Reserves at fractional durations	104
7.8	Notes and references	105
	Exercises	106
<b>8</b>	<b>Continuous payments</b>	<b>109</b>
8.1	Introduction to continuous annuities	109
8.2	The force of discount	110
8.3	The constant interest case	111
8.4	Continuous life annuities	112
8.5	The force of mortality	114
8.6	Insurances payable at the moment of death	116
8.7	Premiums and reserves	118
8.8	The general insurance–annuity identity in the continuous case	119
8.9	Differential equations for reserves	120
8.10	Some examples of exact calculation	121
8.11	Standard notation and terminology	124
8.12	Notes and references	124
	Exercises	125
<b>9</b>	<b>Select mortality</b>	<b>129</b>
9.1	Introduction	129
9.2	Select and ultimate tables	130
9.3	Changes in formulas	131
9.4	Further remarks	133
	Exercises	133
<b>10</b>	<b>Multiple-life contracts</b>	<b>135</b>
10.1	Introduction	135
10.2	The joint-life status	135
10.3	Joint-life annuities and insurances	137
10.4	Last-survivor annuities and insurances	138
10.5	Moment of death insurances	139
10.6	The general two-life annuity contract	140
10.7	The general two-life insurance contract	142
10.8	Contingent insurances	143
10.9	Standard notation and terminology	146
10.10	Spreadsheet applications	146
10.11	Notes and references	147
	Exercises	147
<b>11</b>	<b>Multiple-decrement theory</b>	<b>151</b>
11.1	Introduction	151
11.2	The basic model	151
11.3	Insurances	154

x **Contents**

11.4	Determining the model from the forces of decrement	155
11.5	The analogy with joint-life statuses	156
11.6	A machine analogy	156
11.7	Associated single-decrement tables	159
11.8	Notes and references	161
	Exercises	161
<b>12</b>	<b>Expenses</b>	<b>165</b>
12.1	Introduction	165
12.2	Effect on reserves	167
12.3	Realistic reserve and balance calculations	168
12.4	Notes and references	169
	Exercises	169
<b>PART II</b>	<b>THE STOCHASTIC MODEL</b>	<b>171</b>
<b>13</b>	<b>Survival distributions and failure times</b>	<b>173</b>
13.1	Introduction to survival distributions	173
13.2	The discrete case	174
13.3	The continuous case	175
13.4	Examples	177
13.5	Shifted distributions	178
13.6	The standard approximation	179
13.7	The stochastic life table	181
13.8	Life expectancy in the stochastic model	182
13.9	Notes and references	183
	Exercises	184
<b>14</b>	<b>The stochastic approach to insurance and annuities</b>	<b>187</b>
14.1	Introduction	187
14.2	The stochastic approach to insurance benefits	188
14.3	The stochastic approach to annuity benefits	191
14.4	Deferred contracts	194
14.5	The stochastic approach to reserves	195
14.6	The stochastic approach to premiums	196
14.7	The variance of ${}_tL$	199
14.8	Standard notation and terminology	202
14.9	Notes and references	202
	Exercises	202
<b>15</b>	<b>Simplifications under constant benefit contracts</b>	<b>207</b>
15.1	Introduction	207
15.2	Variance calculations in the continuous case	207
15.3	Variance calculations in the discrete case	209
15.4	Exact distributions	210
15.5	Some nonconstant benefit examples	212
	Exercises	214

<b>16</b>	<b>The minimum failure time</b>	<b>217</b>
16.1	Introduction	217
16.2	Joint distributions	217
16.3	The distribution of $T$	219
16.4	The joint distribution of $(T, J)$	220
16.5	Approximations	228
16.6	Other problems	234
16.7	The common shock model	234
16.8	Copulas	237
16.9	Notes and references	239
	Exercises	240
<b>PART III</b>	<b>RISK THEORY</b>	<b>243</b>
<b>17</b>	<b>Compound distributions</b>	<b>245</b>
17.1	Introduction	245
17.2	The mean and variance of $S$	247
17.3	Generating functions	248
17.4	Exact distribution of $S$	249
17.5	Choosing a frequency distribution	250
17.6	Choosing a severity distribution	253
17.7	Handling the point mass at 0	256
17.8	Counting claims of a particular type	257
17.9	The sum of two compound Poisson distributions	259
17.10	Deductibles and other modifications	260
17.11	A recursion formula for $S$	265
17.12	Notes and references	270
	Exercises	270
<b>18</b>	<b>An introduction to stochastic processes</b>	<b>275</b>
18.1	Introduction	275
18.2	Markov chains	277
18.3	Examples	278
18.4	Martingales	280
18.5	Finite-state Markov chains	281
18.6	Multi-state insurances and annuities	288
18.7	Notes and references	291
	Exercises	291
<b>19</b>	<b>Poisson processes</b>	<b>295</b>
19.1	Introduction	295
19.2	Definition of a Poisson process	296
19.3	Waiting times	297
19.4	Some properties of the Poisson process	298
19.5	Nonhomogeneous Poisson processes	299

xii **Contents**

19.6	Compound Poisson processes	300
19.7	Notes and references	300
	Exercises	301
<b>20</b>	<b>Ruin models</b>	<b>305</b>
20.1	Introduction	305
20.2	A functional equation approach	306
20.3	The martingale approach to ruin theory	309
20.4	Distribution of the deficit at ruin	317
20.5	Recursion formulas	318
20.6	The compound Poisson surplus process	322
20.7	The maximal aggregate loss	325
20.8	Notes and references	329
	Exercises	329
<b>Appendix</b>	<b>A review of probability theory</b>	<b>333</b>
A.1	Introduction	333
A.2	Sample spaces and probability measures	333
A.3	Conditioning and independence	335
A.4	Random variables	335
A.5	Distributions	336
A.6	Expectations and moments	337
A.7	Expectation in terms of the distribution function	338
A.8	Joint distributions	339
A.9	Conditioning and independence for random variables	340
A.10	Convolution	342
A.11	Moment generating functions	346
A.12	Probability generating functions	349
A.13	Mixtures	350
	<b>Answers to exercises</b>	<b>353</b>
	<b>References</b>	<b>367</b>
	<b>Index</b>	<b>369</b>
