Preface XXI

List of Contributors XXIII

Volume I

1.	Introduction	1
	<i>Ulrich Bröckel, Willi Meier, Gerhard Wagner</i>	
1.1	Why this Book?	1
1.2	Why is Chemical Product Design Important?	1
1.3	Structure of the Book Series	3
2	Interaction Forces between Particles	5
	<i>Helmar Schubert</i>	
2.1	Introduction	5
2.2	Forces between Atoms and Molecules	6
2.2.1	Classification of Interaction Energies	6
2.2.2	The Interrelationship between Interaction Energy and Force	7
2.2.3	Repulsive Forces	8
2.2.4	Complete Interaction Potential	8
2.3	Adhesion Forces between Particles, respectively Interfaces (Condensed Matter), in Gaseous Environment	9
2.3.1	Classification of Adhesion Mechanisms	9
2.3.1.1	Adhesion Forces with Material Bridges	10
2.3.1.2	Adhesion Forces without Material Bridges	15
2.3.2	Influence of Surface Roughness and Sorption Layers	17
2.3.3	Effect of Contact Zone Deforming, Increase of Adhesion Force via Pressing	19
2.3.4	Comparison of Different Adhesion Forces	21
2.4	Adhesion Forces in Aqueous Solution	23
2.5	Dynamic Adhesive Forces	27
2.6	Measurements of Adhesion Forces between Particles	28
2.6.1	Static Measurements	28
2.6.1.1	Laboratory Scales	28
2.6.1.2	Centrifuge	28
2.6.1.3	Measurement of the Adhesion Force via Atomic Force Microscopy	29

- 2.6.1.4 Adhesion Force Measurement Equipment of Tabor, Winterton and Israelachvili 29
- 2.6.1.5 TIRM Method 30
- 2.6.2 Dynamic Measurement Methods 30

3 Fundamentals of Crystallization 33

Joachim Ulrich and Matthew J. Jones

Abstract 33

- 3.1 Introduction 33
- 3.2 Fundamentals of Crystallization 34
 - 3.2.1 Thermodynamics of Crystallization 34
 - 3.2.2 Kinetics Effects 41
 - 3.2.2.1 Nucleation 41
 - 3.2.2.2 Crystal Growth 45
 - 3.3 Solids 48
 - 3.3.1 Polymorphs 48
 - 3.3.2 Solvates 48
 - 3.3.3 Chemical Modification 49
 - 3.3.3.1 Crystal Engineering 50
 - 3.3.3.2 The Concept of Supramolecular Synthons 50
 - 3.4 Quantifying Particle Properties 51
 - 3.4.1 Crystal Size and Crystal-Size Distribution (CSD) 51
 - 3.4.2 Crystal Shape (Habit) 52
 - 3.4.3 Crystal Habit Modeling 53
 - 3.4.4 Other Physical Properties of Particles 56
 - 3.4.4.1 Hardness 56
 - 3.4.4.2 Color – Polymorphism/Particle Size Effects 57
 - 3.4.4.3 Flow Properties 58

4 Emulsification Techniques for the Formulation of Emulsions and Suspensions 63

Heike P. Schuchmann, née Karbstein

Abstract 63

- 4.1 Motivation 63
- 4.2 Emulsion Basics 64
 - 4.2.1 Definitions, Major and Minor Ingredients 64
 - 4.2.2 Emulsion Properties 66
 - 4.2.3 Principle of Emulsification 68
- 4.3 Emulsification Processes 69
 - 4.3.1 Conventional and Innovative Techniques 69
 - 4.3.2 Emulsification Using Rotor-Stator Devices 69
 - 4.3.3 High-pressure Homogenization 70
 - 4.3.4 Ultrasonic Emulsification 71
 - 4.3.5 Emulsification Using Microchannel Systems (Membrane Emulsification) 71
- 4.4 Emulsification Process Functions 74

4.4.1	Droplet Disruption Basics	74
4.4.2	Droplet Disruption in Turbulent Flow	74
4.4.3	Droplet Disruption in Laminar Flow	76
4.4.4	Droplet Forming and Detachment at Membrane Surfaces	77
4.4.5	Droplet Coalescence in Emulsification Processes	78
4.4.6	Process Design Based on Emulsion Process Functions	80
4.5	Scale up of Emulsification Processes Using Process Functions	81
4.6	Applications in the Product Design of Solids	82
4.6.1	Emulsification as Process Step to Design Solid Particles in the Submicrometer Range (Melt Emulsification)	82
4.6.2	Formulation of Water-insoluble Crystalline Active Ingredients in Emulsions	83
4.6.3	Emulsification Techniques used to Disperse and Deagglomerate Nanoparticles	86
4.7	Outlook	88
5	Characterization of Disperse Systems	95
	<i>Reinhard Polke and Michael Schäfer</i>	
	Abstract	95
5.1	Introduction	95
5.2	Properties of Disperse Systems and their Relevance for Process Engineering	97
5.2.1	Objectives of Product Characterization	97
5.2.1.1	Property Function – Product Model	98
5.2.1.2	Process Function – Process Model	101
5.2.1.3	Control of the Process Environment	104
5.2.1.4	Modeling	104
5.2.2	Definition of Measurement and Use of Data	104
5.2.3	Measurement Methods	105
5.2.4	Mixing Status and Homogeneity	106
5.2.5	Sensitivity and Kinetics of Disperse Systems	107
5.3	Measuring Methods for Particle Properties	107
5.4	Measuring Process Technology	109
5.5	Online Characterization	114
5.6	Outlook	115
6	Introduction to Technologies Used for Structuring Chemical Products	121
	<i>Jonathan P. K. Seville, Peter J. Fryer and Ian T. Norton</i>	
	Abstract	121
6.1	Introduction	121
6.2	Agglomerated Products	122
6.3	Processes for Making Agglomerated Products	123
6.3.1	Agglomeration Processes	123
6.3.2	Spray Drying	126
6.3.3	Roll Pressing	127

6.4	Soft Solids	128
6.5	Future Developments	129
7	Product Design by Spray Drying	133
	<i>Matthias Kind and Jens Stein</i>	
7.1	Introduction	133
7.1.1	Pros and Cons in Relation to Other Processes	134
7.2	Fundamentals	135
7.2.1	Thermodynamics and Kinetics	135
7.2.2	Droplet Formation	136
7.2.3	Droplet Transformation and Stability	138
7.2.4	Aroma Retention, Oxidation Prevention	138
7.2.5	Liquid–Solid Transformation	139
7.2.6	Capillary Forces, Particle Interactions, Freeze Drying	140
7.3	Control of Product Properties by Design and Operation of Spray-drying Equipment	140
7.4	Conclusions	145
8	Wet Granulation in Agitated Processes	147
	<i>Mehrdji Hemati, Mohammed Benali and S. Diguët</i>	
8.1	Introduction	147
8.2	Theory of Granulation	148
8.2.1	Granule Growth Mechanisms	148
8.2.2	Bonding Mechanisms for Agglomeration	149
8.2.2.1	Static Strength	150
8.2.2.2	Dynamic Strength	152
8.3	Types of Granulators	153
8.3.1	Fluid-bed Granulation	153
8.3.1.1	Description of Fluid-bed Process	153
8.3.1.2	Analysis of Phenomena Occurring during Wet Granulation in Fluid Bed	156
8.3.1.3	Result and Discussion	158
8.3.2	High-shear Mixer Granulator	178
8.3.2.1	System Description	178
8.3.2.2	Process Control of Wet Granulation in High-shear Mixer	180
8.3.2.3	Results and Discussion	181
9	Compaction	193
	<i>Ulrich Bröckel</i>	
9.1	Fundamentals	193
9.2	Roller Press	195
9.2.1	Theoretical Description of Roller Press	196
9.2.2	Equipment for Roller Press	199
9.2.3	Control of Product Properties	201
9.2.4	Conclusions	203
9.3	Tableting	203

9.3.1	Theoretical Description of Tableting Process	205
9.3.2	Control of Product Properties	207
9.3.3	Conclusions	210
10	Extrusion Technology for Product Design	215
	<i>Bernhard van Lengerich, Friedrich Meuser and Christine Ng</i>	
	Abstract	215
10.1	Introduction	215
10.2	Anatomy of Extruders	217
10.2.1	Twin-Screw Extrusion System	217
10.2.2	Instrumentation and Control	219
10.2.3	Specific Mechanical Energy in Extrusion	219
10.2.4	Key Dimensions	220
10.2.5	Basic Screw Element Geometry	220
10.2.6	Types of Elements	223
10.3	Design of Screw Configurations for Food Extrusion	228
10.3.1	Basic Concept: Design by Zones	229
10.3.2	Design Considerations for Screw Geometry	230
10.4	Die Assembly	233
10.4.1	Die Design and Product Expansion	234
10.5	Systems Analytical Approach to Extrusion	235
10.5.1	Optimization of Extrusion Cooking	236
10.5.2	Scale-up	238
10.6	Modeling Food Extrusion	240
10.6.1	FEM/CFD	240
10.6.2	RSM Approach	243
10.6.3	One-dimensional Parameter Model	244
10.7	Outlook	244
11	Manufacturing of Pharmaceutical Dosage Forms using Melt-extrusion Technology	247
	<i>Jörg Rosenberg</i>	
	Abstract	247
11.1	Tablet-manufacturing Technologies	247
11.2	Manufacturing Technologies Involving Melt Processing	248
11.3	Melt Processing of Pharmaceutical Drug-containing Mixtures	249
11.4	Continuous Melt Processing: Extrusion Technology	250
11.5	Application of Melt-extrusion Technology in the Pharmaceutical Field	251
11.6	Tablet Manufacturing by Melt Extrusion: Shaping of the Drug-containing Melt	252
11.7	Melt-Extrusion Formulations for Improving the Bioavailability of Insoluble Drug Actives	254
11.8	Conclusion	255

12	Modeling of Chemical Systems to Predict Product Properties	259
	<i>Rafiqul Gani and Jens Abildskov</i>	
12.1	Introduction	259
12.2	Role of Property Models in Chemical Product Design	260
12.3	Predictive Property Models for Base Properties	263
12.3.1	Pure-Component Properties	263
12.3.1.1	Property Models for Primary Pure-component Properties	264
12.3.1.2	Property Models for Secondary Pure-component Properties	265
12.3.1.3	Secondary Properties Modeled as Primary Property	266
12.3.1.4	Modeling of Functional Properties	267
12.3.1.5	Databases	268
12.3.2	Modeling of Mixture Properties	269
12.3.2.1	Modeling of Liquid Phase Activity Coefficients – Organic Systems	269
12.3.2.2	Modeling of Liquid-phase Activity Coefficients – Polymer Systems	271
12.3.2.3	Modeling of Liquid-phase Activity Coefficients – Electrolyte Systems	271
12.3.3	Partition Coefficients	272
12.3.4	Local UNIFAC Model for Estimation of Solubility of Complex Molecules	273
12.4	Product Design Examples	279
12.4.1	Example 1: Property Prediction for Product Analysis	279
12.4.2	Example 2: Property Prediction in Design of Microparticles	279
12.4.3	Example 3: Property Predictions in Formulation Solvent Replacement	283
12.4.4	Example 4: Property Predictions in Polymer-based Microcapsule Design	289
12.5	Challenges and Opportunities	290
12.5.1	Materials and Chemical Products	290
12.5.1.1	Isomers Distinction	291
12.5.1.2	Structured Polymers and Complex Interactions	291
12.5.1.3	Pharmaceuticals and Agrochemicals	291
12.5.1.4	Polymorphism	292
12.5.2	Computer-aided Property-estimation Systems	293
12.6	Conclusions	293
13	Knowledge Management and Decision Support in Product Development	297
	<i>David Nicolaidis</i>	
	Abstract	297
13.1	Introduction	297
13.2	A New Paradigm for Product Design	298
13.3	The Components of Product Design Decisions	299
13.4	Software Systems: DSS versus KMS versus ELN	302
13.4.1	Tools	303
13.4.2	ELNs	304
13.4.3	Knowledge-management Systems	306

- 13.4.4 DSS 307
- 13.5 Conclusions 308

Further of Interest 311

Volume 2

- 1 Introduction 313**
Ulrich Bröckel, Willi Meier, Gerhard Wagner
- 2 Product Design Fundamentals 317**
Axel Eble and Gerhard Wagner
Abstract 317
 - 2.1 Why Innovate Products 317
 - 2.1.1 Where Product Ideas Come From 319
 - 2.1.2 The Design Space for Product Innovation 320
 - 2.1.3 Business Case of a Product Concept 321
 - 2.2 The Product Design Process 323
 - 2.2.1 Sources of Product Requirements 324
 - 2.2.2 Structure and Weigh Product Requirements 325
 - 2.2.3 Translate Requirements to Properties 327
 - 2.2.4 The Ideality Principle and Resolving Design Parameters in Conflict 329
 - 2.2.5 Design for Quality 332
 - 2.2.6 Prototype and Scaleup 334
 - 2.2.7 Master Plan 336
- 3 New Raw Materials: Biodiesel as an Example of the Application of Product-Design Principles 341**
Willi Meier
Abstract 341
 - 3.1 Raw Materials: The Present Situation 341
 - 3.2 Availability of Biomass 344
 - 3.3 Product Design and Production Routes for Biodiesel 345
 - 3.4 Conclusion 347
- 4 Fats, Oils and Waxes 349**
Claudia Reitz and Peter Kleinebudde
Abstract 349
 - 4.1 Classification 349
 - 4.1.1 Lipids 349
 - 4.1.1.1 Fatty Acids 350
 - 4.1.1.2 Fats and Oils 352
 - 4.1.1.3 Waxes 356
 - 4.1.2 Hydrocarbons 357
 - 4.1.3 Surfactants 358
 - 4.2 Structure and Physical Properties 362

4.2.1	Solid-state Properties of Fats	362
4.2.1.1	Melting Behavior and Lipid Crystallization	362
4.2.1.2	Melting-range and Melting-point Measurements	363
4.2.1.3	General Packing Features of Lipids in Crystals	364
4.2.1.4	Mechanical Properties of the Melted Lipid	365
4.2.1.5	Heat of Fusion, Heat of Crystallization	366
4.2.1.6	Specific Density and Thermal Dilatation	366
4.2.2	Liquid-state Properties of Fats and Oils	368
4.2.2.1	Liquid Order	368
4.2.2.2	Viscosity	368
4.2.2.3	Solubility	369
4.2.2.4	Surface Energy	369
4.2.2.5	Density	370
4.3	Modifying Fats and Oils	370
4.3.1	Fractionation	370
4.3.1.1	Dry Fractionation	371
4.3.1.2	Lanza Fractionation	372
4.3.1.3	Wet Fractionation	372
4.3.2	Fat Hydrogenation	372
4.3.3	Interesterification	374
4.4	Disperse Systems of Lipid–Water Phases	376
4.4.1	Liquid–Crystalline Phases	376
4.4.1.1	Lyotropic Liquid-crystal Structures in Binary Systems	377
4.4.1.2	Cubic Structure (I and V)	377
4.4.1.3	Hexagonal Phases (H_I and H_{II})	378
4.4.1.4	Lamellar Phase (L_α)	378
4.4.1.5	Ternary Phase Diagrams	378
4.4.2	Emulsions	380
4.4.3	Semisolids	383
4.4.4	Liposomes	387
4.4.5	Microemulsions	389
4.5	Special Applications – Pharmaceuticals	390
4.5.1	Suppositories	390
4.5.2	Solid Lipid Nanoparticles and Nanostructured Lipid Carriers	390
5	Starch and Starch-based Products	395
	<i>Claudia V. Leeb and Heike P. Schuchmann</i>	
	Abstract	395
5.1	Market Structure, Turnover, and Typical Starch Products	395
5.2	Botanical Origin and Structure of Starch	397
5.2.1	Classification	397
5.2.2	The Structure of Starch: Main and Minor Components	397
5.2.3	The Botanical Origin of Starch	400
5.3	Manufacturing Technologies of Starch	402
5.3.1	Process Targets	402
5.3.2	Isolation of Native Starches from Natural Sources	403

5.3.2.1	Cereal Starches	403
5.3.2.2	Tuber Starches	403
5.3.3	Chemically Modified Starches	404
5.3.3.1	Motivation and Modification Basics	404
5.3.3.2	Etherification	404
5.3.3.3	Esterification	405
5.3.3.4	Crosslinked Starches	406
5.3.3.5	Oxidized Starch	406
5.3.3.6	Hydrolysis	407
5.3.4	Physically Modified Starches	407
5.3.5	Bioengineered Starches	408
5.4	Properties of Starch and Starch-based Products	408
5.4.1	Basic Requirements	408
5.4.2	Gelatinization of Starch	408
5.4.3	Rheology of Starch Pastes	411
5.4.4	Clarity of Starch Pastes	413
5.4.5	Process and Shelf-Life Stability	413
5.4.5.1	Retrogradation	413
5.4.5.2	Process Stability	414
5.4.5.3	Syneresis Stability	414
5.5	Usage of Starch	415
5.5.1	Starch as Thickener and Binder	415
5.5.2	Starch as Filling Material	416
5.5.3	Starch as Encapsulating Agent	416
5.5.4	Starch as Fat Mimetics	416
5.5.5	Starch as Basic Component of Breakfast Cereals and Snacks	416
5.6	New Applications for Starch	417

6 Gelatine – The Excipient of Choice for Food, Pharmaceutical and Technical Applications 421

Wilfried Babel

Abstract 421

6.1	Introduction and Definition	421
6.2	Structure and Properties	422
6.2.1	Collagen Polymorphism	422
6.2.2	Structure of Collagen Types	422
6.2.3	Amino Acid Compositions of Collagens	422
6.2.4	Biosynthesis of Collagen	423
6.2.5	Post-translational Modifications of Collagen	426
6.2.6	Processing of Collagen Molecules	426
6.2.7	The Fibrillar Collagen Types	427
6.3	Raw Materials and Production	428
6.3.1	Conversion of Collagen to Gelatine	428
6.3.1.1	Raw Materials	429
6.3.1.2	Raw-Material Pretreatment	429
6.3.1.3	Gelatine Extraction	431

6.3.2	Postextraction Processing	431
6.3.3	Drying of Gelatine	431
6.3.4	Gelatine Grades	432
6.3.5	Gelatine Qualities	432
6.3.6	Physical Properties of Gelatine	432
6.3.6.1	Gel Formation	433
6.3.6.2	Melting of Gelatine Gels	434
6.3.7	The Rheological Approach	434
6.3.8	Structure of Gelatine	436
6.3.9	Applications of Gelatine	438
6.3.9.1	Photographic Applications	439
6.3.9.2	Pharmaceutical Applications	439
6.4	Commercial Aspects	440
6.4.1	Markets and Products	440
6.4.2	Global Distribution	441
6.4.3	Future Development	441
7	Sugars	443
	<i>Olaf Häusler</i>	
	Abstract	443
7.1	Sucrose	444
7.1.1	Production	444
7.1.2	Applications and Specific Products	444
7.2	Glucose Syrups	445
7.2.1	Production	445
7.2.2	Characterization	445
7.2.3	Application	446
7.3	Glucose–Fructose Syrups (HFCS)	447
7.3.1	Production	447
7.3.2	Properties and Applications	447
7.4	Glucose (Dextrose)	448
7.4.1	Production	448
7.4.2	Properties and Applications	448
7.5	Maltodextrins and Spray-dried Glucose Syrups	449
7.5.1	Production	449
7.5.2	Application and Specific Products	450
7.6	Fructose	451
7.7	Lactose	451
7.7.1	Structural Formula	451
7.7.2	Features	452
7.7.3	Manufacturing	452
7.7.4	Application	454
7.8	Sugar Alcohols	454
7.8.1	Production – General Principles	455
7.8.2	Properties	455
7.8.3	Sorbitol and Sorbitol Solutions	456

7.8.4	Mannitol	459
7.8.5	Maltitol Syrups	460
7.8.6	Maltitol	460
7.8.7	Xylitol	461
7.8.8	Isomalt	461
7.8.9	Lactitol	462
7.9	Conclusion	462
8	Synthetic Precipitated Silicas as Carrier Materials	463
	<i>Ralf Schmoll</i>	
	Abstract	463
8.1	Introduction and History of Synthetic Amorphous Silicas (SAS)	463
8.2	Overview of Properties, Technologies, and Basics Used in Product Design	466
8.2.1	Properties, Characterization, and Surface Chemistry of SAS	466
8.2.2	Toxicology	471
8.2.3	Production Process for Precipitated Silica	472
8.2.4	Basics Used in Product Design and Engineering	474
8.3	Product Design Examples in Carrier Applications	477
8.4	Outlook	481
9	Design of Heterogeneous Catalysts	485
	<i>Ulrich Kunz, Urs Peuker, Thomas Turek and Marvin Estenfelder</i>	
	Abstract	485
9.1	Introduction	485
9.2	Types of Heterogeneous Catalysts	487
9.2.1	Bulk, Supported and Coated Catalysts	487
9.2.2	Active Components of Inorganic Catalysts	488
9.2.3	Polymer Catalysts	489
9.3	Catalyst Geometries	490
9.3.1	Powder and Irregularly Shaped Catalysts	490
9.3.2	Pellets and Extrudates	491
9.3.3	Monolithic Catalysts	492
9.3.4	Gauzes and Fibers	494
9.4	Manufacture of Heterogeneous Catalysts	496
9.4.1	Preparation of Active Components	496
9.4.2	Shaping of Catalyst Bodies and Carriers	497
9.4.2.1	Pelleting	498
9.4.2.2	Granulation	499
9.4.2.3	Extrusion	499
9.4.2.4	Spray Drying	500
9.4.3	Coating of Carriers	502
9.4.4	Preparation of Supported Catalysts	502
9.5	Design Criteria for Optimal Geometries	504
9.5.1	Impact of Geometry on Catalyst Activity	504
9.5.2	Influence of Diffusion Resistances on Catalyst Selectivity	506

9.5.3	Pressure Drop	511
9.5.4	Manufacturing Costs	513
9.5.5	Design Strategy	513
9.5.5.1	Improvement of the Effective Diffusivity	514
9.5.5.2	Choice of the Characteristic Length	514
9.5.5.3	Optimization of Catalyst Geometry	515
9.5.6	Examples	516
9.6	Conclusions	519
10	Secondary Properties of Peroral Products – Aspects of Stability and Bioavailability	523
	<i>Karsten Mäder</i>	
	Abstract	523
10.1	Introduction	523
10.2	Stability	523
10.2.1	Critical Parameters: Time, Temperature, Humidity, Light, Oxygen, Mechanical Stress	524
10.2.2	Affected Properties	526
10.3	Oral Bioavailability	527
10.3.1	Physiological Aspects of Oral Absorption	527
10.3.2	Influence of Molecular Properties on Peroral Absorption	530
10.3.3	Design of Peroral Formulations with Optimized Absorption Characteristics	532
10.4	Formulation Screening and Selection	534
11	Conceptual Design of Carotenoid Product Forms	539
	<i>Bruno H. Leuenberger</i>	
	Abstract	539
11.1	Introduction	539
11.1.1	Carotenoids	539
11.1.2	Industrial Application Segments: Animal and Human	542
11.1.3	Formulation and Product Forms	542
11.2	Conception of Carotenoid Product Forms	543
11.2.1	Approach to the Conception	543
11.2.2	Industrial Application Field	544
11.2.3	Legal Requirements	545
11.2.4	Customer Requirements and Perception	547
11.2.5	Stability	548
11.2.6	Bioavailability	549
11.2.7	Coloration	549
11.2.8	Commercial Cost Position	550
11.2.9	Technological Possibilities	550
11.2.10	Raw Materials	550
11.3	Formulation of Carotenoid Product Forms	551
11.3.1	Carotenoid Suspensions – Oil-based	551
11.3.2	Carotenoid Suspensions – Water-based	551

11.3.3	Carotenoid Dispersions and Emulsions	552
11.3.4	Carotenoid Powders	552
11.3.4.1	Carotenoid Powders – Granulation	552
11.3.4.2	Carotenoid Powders – Spray Drying	553
11.3.4.3	Carotenoid Dispersion/Emulsion Powders – Spray Drying	553
11.3.4.4	Carotenoid Dispersion/Emulsion Powders – Beadlets	554
11.4	Raw Materials for Carotenoid Product Forms	555
11.4.1	Function of Raw Materials	556
11.4.2	Protective Colloid	557
11.4.2.1	Performance of Protective Colloids	557
11.4.2.2	Perception of Protective Colloid	558
11.5	Technological Application of Carotenoid Product Forms	559
11.5.1	Pigmentation in Animal Nutrition	559
11.5.2	Health Indication in Human Nutrition	561
11.5.3	Coloration of Human Foods	562
11.5.4	Link of Bioavailability and Coloration	564
