Introduction	xix
Part I: Finding Bottlenecks when Something's Wrong	
Chapter 1: Performance Tuning	3
Art or Science?	3
The Science of Performance Tuning	4
The Problem Statement	4
The Plan of Attack	6
Data Collection	6
Data Analysis	7
Performance Tuning Applied	7
Example 1 — Your Application Is Slow	7
Example 2 — Stored Procedure X Is Slow	9
Tools	10
Preventative Measures	13
Summary	14
Chapter 2: Monitoring Server Resources with System Monitor	15
Why Might I Need System Monitor?	15
When Should I Use System Monitor?	16
Performance Monitor Overview	16
Getting Started with System Monitor	18
Performance Logs and Alerts	22
What's the Impact of Running System Monitor?	22
Managing Monitoring Impact	23
Capturing at the Right Time, for the Right Duration	23
How Much Data Will System Monitor Generate?	23
Resource Utilization	24
Kernel Mode versus Application Mode	25
Identifying Bottlenecks	25
Locating Memory Bottlenecks	25
Discovering Disk Bottlenecks	27
Identifying CPU Bottlenecks	28

Contents

Using System Monitor Proactively	29
Running System Monitor on 64-bit Systems	29
Combining System Monitor Logs and SQL Profiler Traces	30
Monitoring Remote Servers	31
Best Practices for System Monitor	31
Taking a Baseline	31
Retaining Performance Logs	32
Patterns and Trends	32
Servers Suffering Very Poor Performance	32
Tuning Performance	32
Being Proactive	32
My System Monitor Counters Are Missing — What Should I Do?	33
Built-in Log Management Tools	34
LogMan	35
Relog	35
Analyzing Log Data	35
LogParser	36
Performance Analysis of Logs	36
Summary	38
<u>Chapter 3: Monitoring SQL Server Resources with System Monitor</u>	<u>39</u>
The Beginning	40
Types of Performance Problems	40
Configuration-Based Performance Problems	41
Schema-Based Performance Problems	41
Types of Bottlenecks	42
Memory Bottlenecks	43
Types of Memory Bottlenecks	43
Confirming Memory Bottlenecks	44

Part III: Preventative Measures and Baseline Performance with Tools

Chapter 10: Capturing, Measuring, and Replaying a Workload Using SQL Profiler	321
Capturing Workloads for Replay	321
Characterizing a Workload for Replay	322
Meeting Requirements for Workload Replays	324
Capturing a Workload	326
Modifying a Workload in a Trace Table for Special Needs	327
Measuring Workload Performance	330
Preliminary Analysis of the Workload	330
New Performance Reference for a Workload Replay	334
Replaying a Workload	337
Workload Generation for Case Scenarios	338
Scenario 1: Validating Performance Improvement	340
Scenario 2: Replaying a Workload in Different Environments and Measuring Overall Response Time	343
Scenario 3: Replaying Multiple Workloads on a Target Server	346
