Foreword	xi
About the Editor	xvii
List of Contributors	xix
Acknowledgements	xxiii
1 Introduction: The Opto-Electronic Integrated Circuit	1
<i>Richard Soref</i>	
1.1 A Few Words About History	2
1.2 The Possibilities for OEICs	4
1.3 The Present Status of OEICs	6
1.4 Silicon-based GeSn and SiGeSn Technology	9
1.5 OEICs for the Near, Mid and Far Infrared	9
1.6 Opto-Electronic Integration with Ultimate CMOS and Post CMOS	10
1.7 Nanophotonics Integrated with Nanoelectronics	10
1.8 Conclusion	12
References	13
2 Silicon Photonic Waveguides	15
<i>G. Z. Mashanovich, G. T. Reed, B. D. Timotijevic and S. P. Chan</i>	
2.1 Introduction	15
2.2 Planar Waveguides	15
2.3 Rib Waveguides	23
2.4 Strip Waveguides	28
2.5 Coupling to Small Silicon Waveguides	31
2.6 Novel Silicon Waveguide Structures	36
2.6.1 <i>Free-standing Waveguides</i>	36
2.6.2 <i>Hollow Waveguides</i>	40
2.7 Summary and Conclusions	43
References	44
3 Silicon-based Photonic Crystal Structures: From Design to Realization	47
<i>Dennis W. Prather, Shouyuan Shi, Janusz Murakowski, Garrett Schneider, Ahmed Sharkawy, Caihua Chen and BingLin Miao</i>	
3.1 Theory of Photonic Crystals and Photonic Bandgap Structures	47
3.1.1 <i>Analogy Between Photonic and Semiconductor Crystals</i>	50
3.1.2 <i>Analyzing Photonic Bandgap Structures</i>	51

3.1.3	<i>Doping of Photonic Crystals</i>	57
3.1.4	<i>Waveguides and Nano-cavities in Photonic Crystals</i>	58
3.2	Fabrication and Characterization of Photonic Crystals	60
3.2.1	<i>Planar/2D Photonic Crystal Fabrication</i>	61
3.2.2	<i>3D Photonic Crystal Fabrication</i>	67
3.3	Overview of Photonic Bandgap Applications in Silicon Photonic Integrated Circuits	72
3.4	Silicon Photonic Crystal Dispersion-based Applications	75
3.4.1	<i>Non-channel Waveguide</i>	75
3.4.2	<i>A Unidirectional Emitter</i>	78
3.4.3	<i>Sub-surface Silicon Optical Bus Based on Three-dimensional Photonic Crystals</i>	80
3.4.4	<i>Dispersion-based Variable Beam Splitter</i>	82
3.4.5	<i>Photonic Crystal Analog-to-digital Converter</i>	84
3.5	Conclusions	86
	References	86
4	Optical Modulators in Silicon Photonic Circuits	95
	<i>F.Y. Gardes, G.T. Reed, G.Z. Mashanovich and C.E. Png</i>	
4.1	Introduction	95
4.2	Mechanisms for Optical Modulation in Silicon	96
4.2.1	<i>Absorption</i>	97
4.2.2	<i>Optical Modulation Mechanisms in Silicon</i>	97
4.3	A Brief History of Silicon Modulator Designs	106
4.4	Conclusion	141
	References	142
5	Silicon Lasers	147
	<i>Bahram Jalali, Dimitris Dimitropoulos, Varun Raghunathan and Sasan Fathpour</i>	
5.1	Introduction	147
5.2	Why Bulk Silicon Cannot Amplify Light	147
5.2.1	<i>Physics of Optical Gain in Bulk Silicon</i>	148
5.3	Approach 1: Quantum Confinement	153
5.4	Approach 2: Erbium Doping and Other Approaches	156
5.4.1	<i>Hybrid Integration of III-V and Silicon</i>	159
5.5	Approach 3: Raman Effect	160
5.5.1	<i>Physics of Raman Scattering in Silicon</i>	161
5.5.2	<i>Limitation of Active Carrier Removal Using a p-n Junction</i>	166
5.5.3	<i>Electrical Power Dissipation Caused by Active Carrier Sweep-out</i>	168
5.5.4	<i>Raman Wavelength Conversion</i>	170
5.5.5	<i>Comparison of Raman with Other Optical Nonlinearities in Silicon</i>	172
5.6	Experimental Realization of Raman-based Silicon Photonic Devices	172
5.7	GeSi Raman Devices	178
5.8	Mid-wave IR (MWIR) Silicon Photonics	180
5.8.1	<i>Prospects of Mid-infrared Silicon Raman Devices</i>	181
5.9	Energy Harvesting in Silicon Raman and Other Nonlinear Optical Devices	182
5.10	Summary	186
	References	186

6	Optical Detection Technologies for Silicon Photonics	191
	<i>A.P. Knights and J.D.B. Bradley</i>	
6.1	Introduction	191
6.2	Photodetector Theory	192
6.2.1	<i>Band-edge Photo-excitation of Charge Carriers</i>	192
6.2.2	<i>Recombination and Generation via Deep Levels</i>	193
6.2.3	<i>p–n Junction Theory of Semiconductors</i>	195
6.2.4	<i>Photodiodes</i>	200
6.3	Photodetector Performance Characteristics	202
6.3.1	<i>Quantum Efficiency</i>	202
6.3.2	<i>Responsivity</i>	203
6.3.3	<i>Response Time</i>	203
6.3.4	<i>Detector Noise</i>	204
6.4	Sub-bandgap Detection	205
6.4.1	<i>Hybridization</i>	206
6.4.2	<i>SiGe-based Devices</i>	207
6.4.3	<i>Integration of Ge Detectors with SOI Waveguide Geometries</i>	213
6.4.4	<i>Sub-bandgap Detection via Chemical Doping</i>	217
6.4.5	<i>Defect-enhanced Infrared Response</i>	220
6.5	Conclusions	225
	References	225
7	Passive Silicon Photonic Devices	229
	<i>Ansheng Liu, Nahum Izhaky and Ling Liao</i>	
7.1	The Waveguide Bend	229
7.2	The Directional Coupler	233
7.3	The Multimode Interference Coupler	237
7.4	The Y-junction	242
7.5	The Mach–Zehnder Interferometer	245
7.6	Bragg Gratings	250
7.7	Fabry–Perot Resonators	255
7.8	Ring Resonators	259
7.9	Conclusion	263
	References	264
8	Integration	269
	<i>Cary Gunn</i>	
8.1	Motivation for Integration	269
8.2	CMOS Integration Approaches	269
8.2.1	<i>Hybrid Integration</i>	269
8.2.2	<i>Monolithic Integration into CMOS</i>	270
8.3	Detailed Description of the Front-end Integration Approach	272
8.3.1	<i>Transistor and CMOS Process Selection</i>	272
8.3.2	<i>CMOS Process Selection</i>	274
8.3.3	<i>Passive CMOS Waveguide</i>	275
8.3.4	<i>Active CMOS Waveguide</i>	275

x	Contents
8.3.5 <i>Implants and Activation</i>	277
8.3.6 <i>Edge-coupling vs Surface-coupling and Reliability</i>	277
8.3.7 <i>Germanium Integration</i>	279
8.4 State of the Art	285
8.4.1 <i>An Integrated 40 Gbps Wavelength Division Multiplexed Transceiver</i>	285
8.4.2 <i>An Integrated 10 GHz Opto-electronic RF Oscillator</i>	289
8.4.3 <i>Aurora</i>	293
8.5 Conclusions	294
References	295
9 Silicon Photonic Applications	297
<i>Richard Jones, Haisheng Rong, Hai-Feng Liu and Mario Paniccia</i>	
9.1 Introduction	297
9.2 Communications and Interconnects	298
9.2.1 <i>Radio-over-fiber (RoF) RF Applications</i>	304
9.3 Nonlinear Optical Effects in Silicon and Applications	307
9.3.1 <i>Silicon Amplifiers and Lasers</i>	308
9.3.2 <i>Wavelength Conversion</i>	312
9.4 Sensing	314
9.4.1 <i>Physical Sensors</i>	314
9.4.2 <i>Chemical Sensors</i>	316
9.4.3 <i>Biochemical Sensors</i>	317
9.4.4 <i>Integrated Lab-on-a-chip</i>	319
9.5 Summary and Conclusions	320
Acknowledgements	320
