<i>Preface</i>	<b>xi</b>
<i>Lewis Clark (1937–2004): an appreciation</i>	<b>xiii</b>
<i>Acknowledgements</i>	<b>xv</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Wells and boreholes	1
1.2 Groundwater occurrence	7
1.2.1 Aquifers, aquicludes and aquitards	7
1.2.2 Porosity and aquifer storage	12
1.3 Groundwater flow	16
1.3.1 Darcy's equation	16
1.3.2 General equations of groundwater flow	20
1.3.3 Radial flow to wells	25
<b>2 Groundwater investigations for locating well sites</b>	<b>31</b>
2.1 Desk studies	34
2.2 Field reconnaissance	38
2.3 Well survey	40
2.4 Geophysical surveys	42
2.4.1 Electrical resistivity	43
2.4.2 Electromagnetics	49
2.5 Drilling investigations	53
2.6 Groundwater resources assessment	61
2.6.1 Inflow estimation: direct recharge	61
2.6.2 Inflow estimation: indirect recharge	66
2.6.3 Aquifer response analysis	66
2.6.4 Outflow estimation	68
2.6.5 Catchment water balance and modelling	69
2.7 Groundwater quality	71
2.7.1 Introduction	71
2.7.2 Chemical composition of groundwater	71
2.7.3 Groundwater for potable supply	73
2.7.4 Groundwater for irrigation	79

2.8	Pollution risk assessment and prevention	81
2.8.1	Groundwater vulnerability	81
2.8.2	Wellhead protection areas	83
2.8.3	Estimating the pollution risk for a new well site	88
2.9	Planning the well scheme	90
<b>3</b>	<b>An introduction to well and borehole design</b>	<b>93</b>
3.1	Drilled wells	93
3.1.1	General design principles	93
3.1.2	Wells in crystalline aquifers	98
3.1.3	Wells in consolidated aquifers	101
3.1.4	Wells in unconsolidated aquifers	106
3.1.5	Economic considerations in well design	110
3.2	Hand-dug wells	111
3.2.1	Design for yield	111
3.2.2	Design for health	115
3.3	Infiltration galleries	118
3.4	Radial collector wells	123
3.5	Observation boreholes	124
3.6	Exploration boreholes	127
3.7	Pump selection	128
3.7.1	Vertical turbine pumps	132
3.7.2	Electrical submersible pumps	133
3.7.3	Motorized suction pumps	135
3.7.4	Helical rotor pumps	136
3.7.5	Hand pumps	138
<b>4</b>	<b>Specific issues in well and borehole design</b>	<b>143</b>
4.1	Choice of construction materials	143
4.1.1	Strength	144
4.1.2	Jointing system	145
4.1.3	Durability	145
4.1.4	Chemical inertness	147
4.1.5	Standards	147
4.2	Casing	149
4.2.1	Steel casing	149
4.2.2	Plastic and fibreglass casing	150
4.3	Screen	151
4.3.1	Slot design and open area	152
4.3.2	Slot width	154
4.4	Gravel pack design	155
4.4.1	Natural gravel pack	155
4.4.2	Artificial gravel pack	156
4.5	Hydraulic design	160
4.5.1	Partial penetration effects	162
4.5.2	Gravel pack loss	165

4.5.3	Screen entrance loss	165
4.5.4	Well upflow losses	168
4.6	Economic optimization of well design	174
4.6.1	General principles	174
4.6.2	Example	175
<b>5</b>	<b>Well and borehole construction</b>	<b>181</b>
5.1	Percussion drilling	186
5.1.1	Drilling in hard-rock formations	188
5.1.2	Drilling in soft, unstable formations	189
5.1.3	Light-percussion drilling	194
5.2	Rotary drilling	195
5.2.1	Direct circulation rotary	195
5.2.2	Fluids used in direct circulation rotary drilling	201
5.2.3	Reverse circulation	206
5.2.4	Top-hole and down-the-hole hammer drilling	209
5.2.5	Borehole testing during drilling	212
5.2.6	Methods of casing and screen installation	215
5.3	Auger drilling	217
5.4	Jetting	217
5.5	Driving of well-points	219
5.6	Manual construction	220
5.7	Well development	223
5.7.1	Well and aquifer damage	223
5.7.2	Developing the well	224
5.7.3	Developing the aquifer around the well	224
5.7.4	Methods of development	226
5.7.5	Disinfecting the well	233
5.8	Wellhead completion	235
<b>6</b>	<b>Formation sampling and identification</b>	<b>241</b>
6.1	Observing the drilling process	241
6.1.1	Observing the drilling process in hard-rock aquifers	244
6.2	Collecting formation samples	245
6.2.1	Disturbed formation sampling	247
6.2.2	Undisturbed formation sampling	252
6.3	Description and analysis of drilling samples	257
6.3.1	Characterizing disturbed samples	258
6.3.2	Characterization of representative samples	258
6.3.3	Characterization of undisturbed samples	265
6.4	Downhole geophysical logging	267
6.4.1	The geophysical logging package	267
6.4.2	Organizing a geophysical logging mission	271
6.4.3	On arriving on site	275
6.4.4	Formation logs	275

6.4.5	Fluid logs	282
6.4.6	Well construction logs	285
6.5	Downhole geophysical imaging	286
6.6	Preparing a composite well log	290
<b>7</b>	<b>Well and borehole testing</b>	<b>293</b>
7.1	Objectives of test pumping	293
7.1.1	Well performance	293
7.1.2	Water quality	294
7.1.3	Sustainability	295
7.1.4	Environmental impacts	296
7.1.5	Aquifer properties	296
7.2	Planning a well pumping test	297
7.2.1	Before starting	297
7.2.2	When to test pump	299
7.2.3	Consents and permissions	300
7.2.4	Equipment	302
7.2.5	The observation network	307
7.2.6	Recording of data	311
7.3	Types of pumping test	313
7.3.1	Dimension pumping	313
7.3.2	The step test	314
7.3.3	Medium- to long-term (constant rate) test	314
7.3.4	Recovery test	316
7.4	Analysis of test pumping data from single wells	317
7.4.1	Fundamentals	317
7.4.2	The misuse of test pumping analysis	317
7.4.3	Well performance – the step test	320
7.4.4	Steady-state analyses	323
7.4.5	Time-variant analysis	326
7.4.6	Analysis of recovery tests	333
7.5	Multiple wells	334
7.5.1	Steady-state analysis of multiple pumping wells	334
7.5.2	Time-variant analysis of multiple wells	335
7.5.3	Application of the Cooper–Jacob approximation to multiple wells	335
7.6	The shape of the yield–drawdown curve: deviations from the ideal response	336
7.6.1	A noninfinite aquifer: presence of an impermeable barrier	336
7.6.2	Recharge during a pumping test	338
7.6.3	Unconfined aquifers: delayed yield	341
7.7	Interpretation of pumping and recovery test data in hard-rock aquifers	343
7.7.1	High yielding hard-rock wells	344
7.7.2	Low yielding hard-rock wells	345
7.7.3	Sustainable yield of hard-rock wells	349

7.8	Single borehole tests: slug tests	349
7.8.1	Slug tests	349
7.8.2	Packer testing	351
7.9	Test pumping a major well field: the Gatehampton case study	352
7.10	Record-keeping	355
<b>8</b>	<b>Groundwater sampling and analysis</b>	<b>357</b>
8.1	Water quality parameters and sampling objectives	359
8.1.1	Master variables	359
8.1.2	Main physicochemical parameters	360
8.1.3	Major ions	361
8.1.4	Drinking water	362
8.1.5	Water for agricultural and industrial purposes	364
8.1.6	Pollution-related parameters	364
8.1.7	Indicator parameters	364
8.1.8	Microbiological quality and indicator parameters	367
8.2	Field determinations	371
8.2.1	The purpose of field determinations	371
8.2.2	Downhole sondes and throughflow cells	372
8.2.3	Field kits for other parameters	373
8.2.4	Emergency water supply	375
8.3	Collecting water samples from production wells	377
8.3.1	The sample line	377
8.3.2	When to sample: well testing	379
8.3.3	When to sample: production wells	381
8.4	Collecting water samples from observation boreholes	381
8.4.1	Preparation for sampling	381
8.4.2	Bailers and depth samplers	383
8.4.3	Simple pumps	385
8.4.4	Submersible pumps	386
8.4.5	Other pumps	386
8.4.6	Sampling at specific depths	388
8.4.7	Sampling for non-aqueous phase liquids	390
8.5	Sample filtration, preservation and packaging	393
8.5.1	Sampling order	395
8.5.2	Physicochemical parameters	395
8.5.3	Microbial parameters	396
8.5.4	Inorganic parameters: acidification and filtration	397
8.5.5	Inorganic parameters: sampling	400
8.5.6	Organic parameters	400
8.6	Packing and labelling samples	403
8.7	Quality control and record keeping	405
8.8	Sample analysis	409
8.9	Hydrochemical databases	411

<b>9</b>	<b>Well monitoring and maintenance</b>	<b>413</b>
9.1	Factors affecting well system performance	414
9.1.1	Physical processes	414
9.1.2	Chemical processes	415
9.1.3	Microbiological processes	421
9.1.4	Well design and construction	423
9.1.5	Well system operation	423
9.2	Monitoring well system performance	424
9.2.1	Monitoring well performance	426
9.2.2	Well inspection tools	433
9.2.3	Pump performance	434
9.2.4	Water quality monitoring	437
9.2.5	Monitoring microbial processes	438
9.3	Well maintenance and rehabilitation measures	439
9.4	Well decommissioning	445
<b>10</b>	<b>Well and borehole records</b>	<b>449</b>
10.1	Well archives	449
10.2	Operational well databases	450
<b>Appendix 1</b>	<b>Units and conversion tables</b>	<b>459</b>
<b>Appendix 2</b>	<b>World Health Organization drinking water guidelines</b>	<b>463</b>
<b>Appendix 3</b>	<b>FAO irrigation water quality guidelines</b>	<b>469</b>
