Preface to third edition	6
Units and symbols	7
List of abbreviations	8
Structure and function	
1 Structure of the respiratory system: lungs, airways and dead space	10
2 The thoracic cage and respiratory muscles	12
3 Pressures and volumes during normal breathing	14
4 Gas laws	16
5 Diffusion	18
6 Lung mechanics: elastic forces	20
7 Lung mechanics: airway resistance	22
8 Carriage of oxygen	24
9 Carriage of carbon dioxide	26
10 Control of acid–base balance	28
11 Control of breathing I: chemical mechanisms	30
12 Control of breathing II: neural mechanisms	32
13 Pulmonary circulation and anatomical right-to-left shunts	34
14 Ventilation–perfusion mismatching	36
15 Exercise, altitude and diving	38
16 Development of the respiratory system and birth	40
17 Complications of development and congenital disease	42
18 Lung defence mechanisms and immunology	44
History, examination and investigation	
19 History and examination	46
20 Pulmonary function tests	48
21 Chest imaging and bronchoscopy	50
Diseases and treatment	
22 Public health and smoking	52
23 Respiratory failure	54
24 Asthma: pathophysiology	56
25 Asthma: treatment	58
26 Chronic obstructive pulmonary disease	60
27 Pulmonary hypertension	62
28 Venous thromboembolism and pulmonary embolism	64
29 Pulmonary vasculitis	66
30 Diffuse parenchymal (interstitial) lung diseases	68
31 Sarcoidosis	70
32 Pleural diseases	72
33 Occupational and environmental-related lung disease	74
34 Cystic fibrosis and bronchiectasis	76
35 Pneumothorax	78
36 Community-acquired pneumonia	80
37 Hospital-acquired (nosocomial) pneumonia	82
38 Pulmonary tuberculosis	84
39 The immunocompromised host	86
40 Lung cancer	88
41 Acute respiratory distress syndrome	90
42 Mechanical ventilation	92
43 Oxygenation and oxygen therapy	94
44 Sleep apnoea	96
Cases and self assessment	
Case studies: questions	98
Case studies: answers	101
Self-assessment questions	107
Self-assessment answers	118

Index 119
