

Index

a

anisotropic particles 90, 131, 132, 139, 144
 Asakura–Oosawa approximation 90, 109, 122, 143

b

biaxial nematic 210
 bifurcation diagram 225
 binary mixture of hard particles 13
 binodal: paranematic–nematic 229
 boundary operator expansion 89, 103, 142
 Brownian
 – angle 187
 – length scale 187
 – time scale 186

c

chain-like structures 51
 charged rods 7
 cholesteric phase of *fd* virus 24
 colloidal membranes 61
 columnar phase 51
 conformal invariance 89, 131, 133, 143
 continuity equation 154
 creeping flow equations 159
 critical behavior 88, 89, 91, 93, 95, 99, 131–133, 143
 crystalline membranes 63

d

density–force relation 118
 density–pressure relation 89, 102, 103, 105, 111, 126, 142, 144

depletion interaction 34

Derjaguin approximation 90, 112, 122, 127, 144

diffusive time scale 186

dilute solution 89, 90, 98, 101, 102, 107, 108, 114, 115, 119, 124, 129, 144

Dirichlet boundary condition 96, 103, 108, 114

Doi–Edwards equation 216, 249

dumbbells 90, 131, 133, 143, 144

dynamic correlations 231

e

ellipsoids 90, 131, 137, 144

elongational flow 151

end density 98, 100, 101, 108, 110, 113, 120, 124, 143, 144

end-to-end distance 88, 91, 94, 95, 97, 100

entropy-driven microphase separation 46

entropy-driven ordering 3

excluded-volume interaction in good solvent 88–90, 92, 96, 99, 103, 104, 106, 114, 115, 119, 124, 143

extensional flow 151

f

fd virus

– structure 15

– suspension 18, 26

fd virus–hard sphere mixture 51

field theory 89, 90, 93, 96, 103,
105, 107, 114, 119, 124, 129,
132, 142, 143

filamentous

– bacteriophage 15

– structures 72

free-energy cost of immersion
90, 108, 113, 139, 143

friction coefficients of rods 163

g

Ginzburg–Landau expansion 220

gradient banding 268

h

hard spheres 34, 37

hard-rod suspensions 68

i

ideal chain 90, 91, 97–99, 103,
105, 106, 109, 112–114, 118,
119, 121, 122, 124, 128, 130,
131, 139, 144

induced surface tension 106, 143

induced torque 138, 141

influence of non-adsorbing
polymer 41

inter-chain overlap 88, 90, 106,
115, 129, 143

isotropic hard rods 37

isotropic–cholesteric phase
transition 18, 22

isotropic–nematic phase
transition 4, 41, 68

isotropic–smectic phase
transition 69

j

Jeffery orbits 173

k

kinetics 67–69

l

lamellar melting 74

lamellar phase in rod–polymer
mixture 48

lamellar phase in rod–sphere
mixture 48

Langevin equation for rods 184

Laplace transform 91, 93, 99,
113, 118

lenses 134, 143

liquid-crystalline phase
transitions 67

m

Maier–Saupe potential 216, 220

monomer density 88, 89, 93, 98,
100–102, 107, 110–112, 118,
123, 126, 128, 139, 142–144

Monte Carlo simulation 61

n

Navier–Stokes equation 155

nematic order parameter 26

nematic–smectic phase transition
11, 68, 72

non-pairwise interactions 90, 130

nonlinear viscoelastic response of
rods 255

o

Onsager theory 7, 9, 10

operator-product expansion 89, 96

orientation-dependent inter-
actions 90, 140, 142, 144

orientational closure relation 222

orientational order-parameter
tensor 208

Oseen tensor 161

osmotic pressure 88, 102, 107,
115

p

paranematic state 227
 particle-to-polymer size ratio 90,
 108–110, 115, 124, 143
 phase behavior
 – of binary mixture 13
 – of rod–polymer mixture 34
 – of rod–sphere mixture 34
 phase diagram
 – of fd virus suspension 14
 – of polymers 37
 – of rods 37
 – of rods in shear flow 270
 – of spheres 37
 planar wall 89, 90, 100, 105, 106,
 108, 117, 144
 polymer depletion 87, 89, 97,
 101, 108, 127, 144
 polymer–colloid mixtures 89, 144
 polymer–magnet analogy 89, 99,
 101, 114, 129
 polymer-coated fd virus 22
 polymer-induced interaction 90,
 114, 119, 121, 126, 127, 139,
 143, 144

r

radius of gyration 88, 97, 100
 renormalization group 99, 107
 renormalized mean-field
 approximation 99, 107,
 115, 143
 rod–polymer mixture 34, 64
 rod–sphere mixture 34, 46
 rods in shear flow 210, 224
 rods with finite aspect ratio 10
 rotational Brownian motion of
 a rod 194, 206
 rotational friction of rods 169

s

scalar orientational order
 parameter 210
 scaled particle theory 10

scaling 88, 89, 94, 95, 101, 107,
 108, 121, 125
 scaling dimension 93, 94, 96,
 103, 112, 132, 133
 screening length 107, 115
 second virial approximation 3, 4,
 11
 self-assembled colloidal
 membranes 55
 semi-flexible rods 9
 semidilute solution 88, 102, 107,
 114, 115, 124, 144
 shear-banding transitions 266
 simple shear flow 151
 small-particle operator expansion
 89, 90, 96, 112, 123, 128, 130,
 132, 139, 140, 143
 smectic phase of fd virus 29
 Smoluchowski equation for rods
 198
 spherical particle 89, 103, 108,
 111, 121, 127, 143, 144
 spinodals, paranematic–nematic
 225
 stress tensor 103, 132, 156
 – for rods 233
 surface-induced smectic ordering
 64

t

translation friction of rods 165
 translational Brownian motion of
 a rod 192, 206
 twisted ribbons 55

u

uniaxial nematic 210
 universal properties 88, 90, 93,
 102, 103, 107, 112, 119, 142

v

velocity-gradient tensor 151
 viscoelasticity of rods 249
 vorticity banding 267
