## • Symbols and Numerics •

- \* (asterisk) as multiplication operator, 321
- ^ (caret) as exponential operator, 321
- : (colon) as data label separator, 149
- , (comma) as data label separator, 149
- = (equals sign)
  - for calculated field formulas, 116
  - in comparison operators, 27, 28, 183, 322
- > (greater than sign) in comparison operators, 27, 28, 183, 322
- < (less than sign) in comparison operators, 27, 183, 322
- (minus sign) as subtraction operator, 321
- () (parentheses) for overriding operator precedence, 326
- + (plus sign)
  - as addition operator, 321
  - as Fill Handle, 15
- # (pound sign) in rows too narrow for values, 59
- =RAND () function, 238
- / (slash) as division operator, 321
- #VALUE error message for DGET function, 172
- 0 as logical value for false, 67
- 1 as logical value for true, 66–67
- 3-D charts
  - avoiding, 310–313, 321
  - formatting walls of, 156
  - misleading, 312–313
  - pie charts, 312–313, 321
  - 3-D View command for, 156

## • A •

- absolute deviation, calculating average, 185
- absolute reference, 321

- Access (Microsoft)
  - defined, 321
  - exporting data to Excel, 34
  - importing tables from, 47–50
  - querying to import data from, 50–55
  - as relational database application, 11
- accuracy issues for inferential statistics, 294
- analysis of variance (ANOVA) tools, 260–261
- Analysis ToolPak add-in. *See* Data Analysis tools
- annotating scatter plots, 253
- ANSI (American National Standards Institute)
  - CHAR function for returning characters, 65
  - CODE function for returning codes, 65
- Answer Report (Solver), 273–274, 277
- area charts, 306
- arguments of functions
  - defined, 160, 324
  - entering, 163–164
- arithmetic mean (average). *See also* median; mode
  - AVERAGE function for, 160, 165, 185–186
  - AVERAGEA function for, 186
  - DAVERAGE function for, 165–168
  - defined, 321
  - Descriptive Statistics tool for, 227
  - exponential smoothing, 235–238, 324
  - field settings for, 98, 108
  - moving average, 233–235, 325
  - as normal distribution parameter, 297
  - other common average measurements, 290–291
  - standard calculations for pivot tables, 108–109
  - statistical measure on status bar for, 17–18
  - sum of squared deviations from, 199

- arithmetic mean (average). *(continued)*
    - from summarized value, 108
    - TRIMMEAN function for, 186–187
    - t-Test: Paired Two Sample for Means tool, 246–248
  - arithmetic operators, 321
  - arrays
    - counting values within a range, 193–194
    - for exponential curve best fitting data, 214–215
    - finding *k*th largest value, 189–190
    - finding *k*th smallest value, 190
    - finding percentile of value in, 191–192
    - finding value at a percentile, 192
    - formulas returning, 194
    - ranking a value in, 190–191
  - ascending order
    - defined, 321
    - sorting pivot table data in, 93
    - sorting table records in, 20, 22
  - ASCII text files. *See also* text files
    - defined, 321
    - delimited text files versus, 36
    - importing, 37–41
  - Assume Linear Model setting for Solver, 279, 284
  - Assume Non-Negative setting for Solver, 279–280
  - asterisk (\*), as multiplication operator, 321
  - AutoFill feature, 15, 16
  - AutoFilter tool. *See also* filtering tables
    - advanced filtering, 26–30
    - applying two filtering operations to same field, 26
    - Boolean logic expressions for, 26–28
    - clearing a filter, 23
    - creating custom filters, 23–25
    - defined, 321
    - dirty data with, 25
    - filtering a filtered table, 25–26
    - filtering tables, 21–23
    - turning off, 23
    - unfiltering a table, 22
  - AutoFormat options for pivot tables, 104–105
  - Automatic Scaling setting for Solver, 280
  - AVEDEV function, 185
  - average absolute deviation, 185
  - average (arithmetic mean). *See also* median; mode
    - AVERAGE function for, 160, 165, 185–186
    - AVERAGEA function for, 186
    - DAVERAGE function for, 165–168
    - defined, 321
    - Descriptive Statistics tool for, 227
    - exponential smoothing, 235–238, 324
    - field settings for, 98, 108
    - moving average, 233–235, 325
    - as normal distribution parameter, 297
    - other common average measurements, 290–291
    - standard calculations for pivot tables, 108–109
    - statistical measure on status bar for, 17, 18
    - sum of squared deviations from, 199
    - from summarized value, 108
    - TRIMMEAN function for, 186–187
    - t-Test: Paired Two Sample for Means tool, 246–248
  - AVERAGE function
    - AVERAGEA function versus, 186
    - DAVERAGE function versus, 165
    - example, 160
    - overview, 185–186
  - AVERAGEA function, 186
  - axes for pivot charts
    - logarithmic scaling for, 314–316
    - options for, 150–152
    - scaling, 151–152
    - titles for, 145–146
- **B** •
- BAHTEXT function, 65
  - bar charts, 306
  - best-fit line
    - finding y-axis intercept, 213
    - forecasting dependent variables using, 213

BETADIST function, 217  
BETAINV function, 217–218  
binary constraints in optimization modeling, 271  
BINOMDIST function, 207–208  
binomial distributions  
    cumulative, 209  
    defined, 322  
    finding probability of, 207–208  
    hypergeometric, 209  
    negative, 208  
    uses for, 207  
blank rows in pivot tables, 106  
Boolean (logical) expressions  
    comparison operators for, 27–28, 322  
    for COUNTIF function, 183  
    defined, 322  
    described, 26  
    running an advanced filter operation, 28–30  
    with two tests, filtering on both, 28  
    with two tests, filtering on either, 28  
bubble charts, 307  
building tables manually  
    AutoFill feature for, 15  
    entering data in a table, 12  
    Fill command for, 15  
    Table command for, 13–15

## • C •

calculated fields  
    adding to pivot tables, 115–117  
    defined, 322  
    entering formulas for, 116–117  
    removing from pivot tables, 119–120  
    reviewing formulas for, 121–122  
calculated items  
    adding to pivot tables, 117–119  
    defined, 322  
    entering formulas for, 118–119  
    naming, 118  
    removing from pivot tables, 120–121  
    reviewing formulas for, 121–122  
    solve order for, 122–123, 327

capacity constraints in optimization modeling, 265, 268  
capitalization. *See also* case-sensitivity  
    converting text to lowercase, 69  
    converting text to uppercase, 73–74  
    first letter of every word, 70  
caret (^) as exponential operator, 321  
case-sensitivity  
    of EXACT function, 67  
    for sorting table records, 21  
categories of functions, 165  
cells. *See also* fields  
    centering labels in pivot tables, 100  
    copying values between, in pivot tables, 124  
    counting, functions for, 169  
    defined, 322  
    empty, counting in a range, 183  
    erasing contents, 61  
    formatting in pivot tables, 103–104  
    matching criteria, counting, 182  
    naming in formulas, 266–267  
    non-empty, counting in a column, 17, 18  
    non-empty, counting in a range, 18, 182  
    showing details in pivot tables, 97, 103  
    sorting table records by color, 22  
    with values, counting in a range, 181–182  
centering labels in pivot table cells, 100  
Central Derivatives setting for Solver, 280–281  
CHAR function, 65  
characters. *See also* text  
    counting, in strings, 68–69  
    finding start of string within a string, 67  
    finding starting position of text fragment in string, 71  
    nonprintable, removing from text, 65–66  
    returning ANSI codes for, 65  
    returning for ANSI codes, 65  
    returning from middle of string, 69  
    returning specific number from left end of string, 68  
    returning specific number from right end of string, 70–71  
chart axes options, 150–152

- chart data labels. *See also* pivot charts
    - defined, 322
    - options for, 147–149
  - chart data table options, 149–150
  - chart gridline options, 152
  - chart legend. *See also* pivot charts
    - connecting data markers to, 149
    - defined, 132, 146, 322
    - options for, 146–147
  - chart titles. *See also* pivot charts
    - chart message as, 307
    - defined, 322
    - filling with color or pattern, 146
    - options for, 145–146
  - chart type. *See also* pivot charts; scatter plots; 3-D charts
    - area, 306
    - bar, 306
    - bubble, 307
    - column, 306, 310–312
    - cone, 306
    - cylinder, 306
    - defined, 322
    - doughnut, 306
    - line, 306
    - pie, 306, 307–308, 312–313, 321
    - pyramid, 306
    - selecting, 143–144, 305–307
    - surface, 307
  - charts. *See* histograms; pivot charts; scatter plots
  - CHIDIST function, 210–211
  - CHIINV function, 211–212
  - chi-square
    - defined, 322
    - test function, 212
  - chi-square distributions
    - assessing sampling error, 212
    - calculating level of significance, 210–211
    - calculating value for given level of significance, 211–212
  - CHITEST function, 212
  - chronological order
    - defined, 322
    - sorting table records in, 20
  - CLEAN function, 65–66
  - cleaning data
    - capitalizing first letter of every word, 70
    - comparing two strings, 66–67
    - concatenating (combining) strings, 66
    - converting text function formulas to text, 74
    - converting text to lowercase, 69
    - converting text to value, 74
  - copying data, 61–62
  - counting characters in string, 68–69
  - Data Validation command for, 75–78
  - deleting unnecessary columns, 58
  - deleting unnecessary rows, 58
  - erasing unneeded cell contents, 61
  - finding start of string within a string, 67
  - finding starting position of text fragment in string, 71
  - formatting numbers and converting to text, 73
  - formatting numeric values, 61
  - moving data, 62
  - need for, 57–58, 63–65
  - removing nonprintable characters, 65–66
  - removing spaces from end of text, 73
  - repeating strings, 70–71
  - replacing data in fields, 62–63
  - replacing portions of string, 70
  - replacing text in string, 72
  - resizing columns, 59–60
  - resizing rows, 60–61
  - returning characters from left end of string, 68
  - returning characters from middle of string, 69
  - returning characters from right end of string, 70–71
  - returning strings, 72–73
  - rounding numeric values and converting to text, 68
- Clear All command, 61
- Clear command, 23
- clearing. *See* removing or deleting
- CODE function, 65

- collapsing group details
  - in pivot charts, 138–139, 140
  - in pivot tables, 95
- colon (:), as data label separator, 149
- colors
  - filling pivot chart titles with, 146
  - for pivot chart fonts, 155
  - for pivot chart lines, 146
  - sorting cells by, 22
- column charts
  - overview, 306
  - 3-D, avoiding, 310–312
- columns. *See also* calculated fields; fields
  - breaking rows into, 39
  - choosing default format for, 40, 43
  - counting non-empty cells in, 17, 18
  - deleting, 58
  - fields represented by, 11
  - filtering in pivot tables, 91, 100–101
  - grand totals for pivot table, 101, 106
  - not to import, identifying, 40
  - percent of (custom calculation), 112
  - resizing, 59–60
  - sorting rows versus, 21
- COMBIN function, 184
- combinations, counting, 184
- comma (,) as data label separator, 149
- comma-delimited text files. *See* delimited text files
- comparing two text strings, 66–67
- comparison operators. *See also* Boolean (logical) expressions
  - for COUNTIF function, 183
  - defined, 322
  - overview, 27–28
- CONCATENATE function, 66
- Conditions for assume linear model are not satisfied message, 284
- cone charts, 306
- CONFIDENCE function, 202–203
- confidence interval for mean, 202–203
- confidence level, Descriptive Statistics tool for, 228
- Conjugate Search setting for Solver, 281
- constants

  - smoothing, 235, 237
- constraints in optimization modeling
  - in Answer Report, 273
  - binary, 271
  - described, 264–265
  - error value encountered with, 284
  - formulas for, 270–271
  - identifying, 267–268
  - integer, 271, 277, 278
  - removing or changing, 272
- Convergence setting for Solver, 279, 282
- converting
  - Pearson’s R-squared value to normally distributed variable  $z$ , 216
  - text function formulas to text, 74
  - text to lowercase, 69
  - text to uppercase, 73–74
  - text to value, 74
  - values to text, after formatting, 73
  - $z$  to Pearson’s R-squared value, 216
- Copy command, 61
- copying
  - values between pivot table cells, 124
  - worksheet data, 61–62
- CORREL function, 215
- Correlation analysis tool, 256–258
- correlation coefficient, 215
- correlation data comparison, 306, 307
- correlation functions
  - CORREL, 215
  - FISHER, 216
  - FISHERINV, 216
  - PEARSON, 216
  - RSQ, 216
- COUNT function, 181–182
- COUNTA function, 182
- COUNTBLANK function, 183
- COUNTIF function, 183
- counting
  - cells, functions for, 169
  - cells in a range, with values, 181–182

counting (*continued*)

- cells matching criteria, 182
  - characters in strings, 68–69
  - combinations, 184
  - database records, with values, 168–170
  - defined, 323
  - Descriptive Statistics tool for, 228
  - field setting for, 98
  - items in a data set, 181–184
  - non-empty cells in a column, 17, 18
  - non-empty cells in a range, 18, 182
  - non-empty records in a database, 168–170
  - permutations possible for sample, 184
  - records in a database table, 168–170
  - statistical measures on status bar for, 17, 18
  - values in array in a range or bin, 193–194
- COVAR function, 199
- Covariance analysis tool, 259–260
- covariance, calculating, 199
- CRITBINOM function, 209
- criteria range. *See also specific functions*
- combining criteria, 167–168
  - defined, 166
  - records selected by each row, 167
- cross-tabulations. *See also* pivot charts;
- pivot tables
  - defined, 81, 323
  - pivot tables versus pivot charts for, 309–310
  - usefulness of, 81–82, 88, 303
- cumulative beta probability density, 217
- cumulative binomial distributions, 209
- cumulative distribution for Weibull distribution, 221
- cumulative percentages in histograms, 230
- custom calculations
- adding a second standard calculation, 112
  - customizing a standard calculation, 112–115
  - defined, 111, 323
  - field settings for, 112–114
  - naming, 114
  - options for pivot tables, 112
  - tasks for adding to pivot tables, 111
- custom sorting lists for pivot tables, 101

## customizing pivot charts

- axes, 145–146, 150–152
  - chart area, 155–156
  - chart type, 143–144, 305–307
  - data labels, 147–149
