Erratum to Chapter 33: Panel Discussion: Moving Social-Behavioral Modeling Forward

After publication of the book, it came to the author’s attention that there was a typing error in Page 758, the second line from the bottom of paragraph two.

The phrase in the published version is ‘If one uses an unreproducible random string, then the most that can be probably baked in is a statistical distribution over a set of individually unreproducible runs (by maximum entropy methods, for example).’

The correct phrase is ‘If one uses an unreproducible random string, then the most that can be provably “baked in” is a statistical distribution over a set of individually unreproducible runs (by maximum entropy methods, for example).’
