INDEX

A

About Face 3 (Cooper, Reimann, and Cronin), 8
academic programs, 695–696
accelerometers, 442
accents in voice systems, 597
acceptance of change, 701
access issues in interviews, 148
accessibility
  considerations, 602
  as interviewee selection factor, 95
  requirements, 330
ACM Digital Library, 572
Acrobat Reader, 414
actions
  for change, 705
  customer questions about, 134–139
  icons for, 584
  on objects, 433
  pattern organization by, 421
active listening
  guidelines for, 59–61
  in meeting facilitation, 374
activities
  in form and behavior patterns, 413–420
  research, 354–356
  
activity diagrams, 212–213
Adams, Scott, 113
Adobe Acrobat Reader, 414
Adobe Fireworks, 527, 634
Adobe FrameMaker, 681
advertising in interview recruitment, 108
affinity diagrams, 215–217
affordances, 480–481
agendas for interaction framework reviews, 475–476
aggregate data, 221
agile methods, 310, 559–560
airline travel service elements, 437
alarms, inappropriate, 601
Alexander, Christopher, 9
alignment of elements, 575–576
analogies for company attributes, 75
analysis
  customer and user data. See customer and user data analysis
  user and domain. See user and domain analysis
anger and change, 700
anomalies in observations, 142
anonymity in interviews, 70
anonymous observations, 185–187
anthropomorphism in voice systems, 596–597
any-to-any relationships, 132
appearance models, 639
approachable attribute, 509–512
arbitrary decisions, 640
archetypes
  organizational, 272–273
  personas for, 234–245
  screens, 618–620
architectures for platforms, 439–440
art, 4
articulating models within cases, 212–214
aspirations in personas, 271
asset production, 686–687
associations, visual properties for, 578–579
assumptions
  in detailed design, 640, 645
  in interviews, 71–72
attitudes
  as behavioral variable, 251
  in interviews, 120
  in personas, 271
attributes
  in design language development, 502–512
experience. See experience attributes
  objects, 130–132, 433
audible interfaces
  detailed design principles, 596–600
  detailed design processes, 615–616
  interaction framework process for, 469–470
audience
  for F&BS, 661
  for surveys, 190
audio recording, 62–63
authenticity of materials, 492
Autodesk page layouts, 622–623
automobile interfaces, 468–469

B
backdrop in visual system, 627–629
background points in F&BS, 662
bad assumptions, 640
bad interviews, 151
bar graphs, 221
bargaining in change, 700–701
base grid units, 622–623
basic human goals, 266
  F&BS. See form and behavior specification (F&BS)
    patterns for, 413–423
    in personas, 247–251, 269–270
    predictors, 91–92
    principles, 406–413
    prototypes, 617–618
  qualitative research methods for, 55
between interviews activities, 151–152
Beyer, H., 31
bias in data analysis, 222
big issues and ideas
  in design vision meetings, 521–523
  in detailed design, 554–555
  in project plans, 568
bimodal distributions, 219
blame in voice systems, 599–600
Block, Peter, 35
body concerns, ergonomics for, 142–143
body language in interviews, 61, 122–123
brains and personas, 235
brainstorming
  requirements, 308
    with sketches, 443–449
brand equity. See experience attributes
brand stewards, information from, 66
Brave, Scott, 596–599
brilliant attribute, 504–505
broad domain questions for interviews, 126–127
budgets in project planning, 38–39
bug fix priority, personas for, 234
business analysts, 27–28, 642–643
business contacts, 131, 133
business environments, interviews in, 113–117, 125–126
business needs, requirements from, 328–331
business understanding, 65–67
interview scheduling, 67–69
project kickoff, 69–70
stakeholder identification, 67–69
stakeholder interviews. See stakeholder interviews
Butler, J., 9, 571
buttons as widgets, 588–591
Buxton, Bill, 379
buyers vs. users, 114

C
Calde, Steve, 365
calendar controls, 589
calendaring system example
mental model objects, 129
persona roles, 246
research roles, 87, 89, 93, 97
scenarios for, 316
call center software example
persona roles, 245
research roles, 87, 89, 92, 97
scenarios for, 315
camera company Web site example
interview questions, 126
mental model objects, 129
persona roles, 245
research roles, 86, 88, 92, 96
scenarios for, 314–315
cameras example
interview questions, 126
persona roles, 245
research roles, 86, 88, 92, 96
scenarios for, 314–315
canvas size for grids, 623–624
capabilities improvements
education, 695–697
overview, 693–695
role expansion, 697–707
capabilities in personas, 271
car buyer persona, 321
card sorting, 196–197, 213
Carroll, John, 383
cars
accidents, 600
signature elements for, 494
cascading menus, 590
case-specific stories, 121
casual observation, 185–187
categories
 personas for, 234
 vs. search, 594–595
causality determinations, 222–223
celebrations of short-term wins, 706–707
Challenger explosion, 407
challenges
 in interviews, 146–151
 in user and domain analysis meetings, 368–369
change efforts, 697–698
characteristics, 698–699
instigating, 701–707
overcoming sense of loss, 699–701
charts, 221
cheat sheets for interviews, 80–81
check boxes, 589
check-coding, 209
check-ins
   for interaction framework, 473–474
   in project plans, 568
children, interviewing, 147
chitchat in interviews, 124
chromostereopsis, 485
Church, Allan, 190
circumstances effects on behaviors, 255
clarity in F&BS, 676
close collaborators, 25
   business and systems analysts, 27–28
   design engineers, 26–27
   project owners, 25–26
   subject matter experts, 28
   usability testers, 28
closed-ended questions, 60–61
clothing store example
   persona roles, 246
   research roles, 87, 90, 94, 98
   scenarios for, 316–317
clusters
   in affinity diagrams, 215–216
   experience attributes qualities, 335–338
co-ideation, 18
coalition for change, 702–703
coding data, 209–215
cognitive characteristics of personas, 327
cognitive work, 410
coherent design, 409
collaboration, 138
   close collaborators, 25–28
   in detailed design, 552, 564, 640–644
   engineers, 689
   for framework definition, 393
   industrial designers, 23
   interaction designers, 18
   visual interface designers, 22
color, 484–485
   for emotion, 487–488
in F&BS, 668–670
   in industrial design, 638
   in interaction framework sketches, 527
   for usability, 485–486
color blindness, 486
color temperature, 484
combinations of patterns, 421
combo boxes, 589
command line, 413–414
comments
   in framework definition meetings, 398
   in interview transcript example, 155–181
common sense, 571–573
common widgets, 588–592
communication
   context scenarios, 322–326
   data analysis findings, 224–225
   in detailed design
      F&BS for. See form and behavior
         specification (F&BS)
      flow, priority, and relationships, 573–579
      icons for, 582–586
      information design, 579–581
framework and design language. See design
   vision meetings
   in persona creation process, 279–294
   personas for, 232–233
   in visual system, 631
communication tools for experience attributes, 341–346
company size factor in interview sample size, 90
comparative evaluations, 650, 656
comparative usability evaluations (CUE) studies, 652
competition as interview sample size factor, 95
competitors
   as information source, 197–198
   interview questions about, 74, 78
   as requirements factor, 330
complexity, simplified attribute, 504
components
descriptions, 667–668
fit issues, 636
installation problems, 601
composite models, 215, 217
concerns
at design vision meetings, 545–549
interview questions about, 73
concrete solutions, 3
conferences, interviewee recruitment at, 108
confidence intervals and sample size, 192
confirmations in voice systems, 599
conflicts between qualitative and quantitative findings, 221–222
consensus
formal checkpoints for, 352
personas for, 232–233
