About the Author xv

CHAPTER 1
The Basics of VBA Programming 1
1.1 Getting started 1
1.2 VBA objects and syntax 2
    1.2.1 The object-oriented basic syntax 3
    1.2.2 Using objects 3
1.3 Variables 5
    1.3.1 Variable declaration 5
    1.3.2 Some usual objects 7
    1.3.3 Arrays 9
1.4 Arithmetic 10
1.5 Subroutines and functions 13
    1.5.1 Subroutines 14
    1.5.2 Functions 15
    1.5.3 Operations on one-dimensional arrays 16
    1.5.4 Operations on two-dimensional arrays (matrices) 16
    1.5.5 Operations with dates 19
1.6 Custom objects 21
    1.6.1 Types 21
    1.6.2 Classes 22
1.7 Debugging 24
    1.7.1 Error handling 24
    1.7.2 Tracking the code execution 25
Contents

4.2 Trees 112
  4.2.1 Binomial trees 112
  4.2.2 Trinomial trees 116
4.3 Monte-Carlo scenarios 116
  4.3.1 Uniform number generator 117
  4.3.2 From uniform to Gaussian numbers 127
4.4 Simulation and regression 129
4.5 Double-barrier analytical approximation 134

CHAPTER 5
Monte-Carlo Pricing Issues 139
  5.1 Multi-asset simulation 139
    5.1.1 The correlations issue 139
    5.1.2 The Gaussian case 139
    5.1.3 Exotics 143
  5.2 Discretization schemes 146
  5.3 Variance reduction techniques 147
    5.3.1 Antithetic variates 147
    5.3.2 Importance sampling 148
    5.3.3 Control variates 153

CHAPTER 6
Yield Curve Models 163
  6.1 Short rate models 163
    6.1.1 Introduction 163
    6.1.2 Hull and White one-factor model 164
    6.1.3 Gaussian two-factor model 180
    6.1.4 Hull and White two-factor model 203
  6.2 Forward rate models 204
    6.2.1 Generic Heath-Jarrow-Morton 205
    6.2.2 LMM (LIBOR market model) 216

CHAPTER 7
Stochastic Volatilities 233
  7.1 The Heston model 234
    7.1.1 Code 234
    7.1.2 A faster algorithm 239
    7.1.3 Calibration 248
  7.2 Barrier options 254
    7.2.1 Numerical results 257
    7.2.2 Code 257
  7.3 Asian-style options 260
  7.4 SABR model 264
    7.4.1 Caplets 264
    7.4.2 Code 265
