Introduction: A Depositional Approach to the Study of Archaeological Excavations  1

1 Principles of Site-formation or Depositional Processes  11
  1.1 The Concept of the Deposit  11
  1.2 Types of Archaeological Deposits  14
  1.3 Anthropogenic Sediments  14
  1.4 Some Misconceptions of Site-formation and Depositional Processes  16
  1.5 Soils and Post-Depositional Processes  16
  1.6 Recording Deposits and Site-formation Processes (Stratigraphy)  18

2 Natural Sediments and Processes in Sites  21
  2.1 Introduction  21
  2.2 Principles of the Transport and Deposition of Sediments  22
    2.2.1 Physical Processes  22
    2.2.2 Sediment Properties  24
    2.2.3 Fabric  28
    2.2.4 Sedimentary Structures  28
    2.2.5 Some Remarks on the Interpretation of Textures, Fabrics, and Sedimentary Structures  33
  2.3 Mass Movement in Sites  34
    2.3.1 Slides and Slumps  35
    2.3.2 Rock and Debris Falls, and Avalanches and Grain Flows  37
    2.3.3 Solifluction  40
    2.3.4 Debris Flows and Mudflows  43
  2.4 Water Flows in Sites  47
    2.4.1 Shallow Water Flows  47
    2.4.2 Hyperconcentrated Flows  57
    2.4.3 High-energy Flows  60
  2.5 Aeolian Processes  63
  2.6 Biological Sediments and Processes  68
    2.6.1 Dung, Coprolites, and Guano  68
    2.6.2 Bioturbation  71
  2.7 Post-depositional Features and Processes  75
    2.7.1 Erosional Features, Deflation, Lags, Stone Lines, and Pavements  76
    2.7.2 Diagenesis  78
    2.7.3 Soil-forming Processes  86
  2.8 Concluding Remarks  93
3 Anthropogenic Sediments 99
  3.1 Introduction 99
  3.2 Burnt Remains 100
  3.3 Organic Remains and Human Activities 116
    3.3.1 Biological Constructions (Matting, Roofing) 116
  3.3.2 Stabling 117
  3.4 Formation of Construction Materials 124
    3.4.1 Living and Constructed Floors 124
    3.4.2 Mudbricks, Daub and Other Mud Construction Materials 132
  3.4.3 Mortar, Wall Plaster 135
  3.5 Maintenance and Discard Processes 138
    3.5.1 Sweeping and Raking 138
    3.5.2 Dumping and Filling 140
    3.5.3 Trampling 146
  3.6 Concluding Remarks 148

4 Site Stratigraphy 149
  4.1 Introduction 149
  4.2 Historical Overview 150
  4.3 The Definition of Stratigraphic Units in an Excavation 151
  4.4 Nature of Contacts 154
  4.5 Time and Stratigraphy 157
  4.6 Massive Thick Layers 157
  4.7 Basic Stratigraphic Principles 158
    4.7.1 The Principle of Superposition of Beds 158
    4.7.2 The Principle of Cross-Cutting Relationships 159
    4.7.3 The Principle of Original Continuity of Layers 160
    4.7.4 The Principle of Original Horizontality of Layers 160
    4.7.5 The Principle of Included Fragments 160
  4.8 What is ‘In Situ’? 161
  4.9 Human Constructions and Depositional Stratigraphy 162
    4.9.1 The Concept of Facies 162
  4.11 Practicing Stratigraphy 164
    4.11.1 Erosional Contacts and Unconformities 166
    4.11.2 The Importance of Baulks and Sections 167
    4.11.3 Inclined Layers 168
  4.12 Concluding Remarks 169

5 Non-architectural Sites 171
  5.1 Introduction 171
  5.2 Open-air vs Cave Sites 172
    5.2.1 Caves 172
    5.2.2 Open-air Sites 189
  5.3 Other Stratigraphic Themes 192
    5.3.1 Burials 192
    5.3.2 Palimpsests 194
  5.4 Concluding Remarks 197

6 Architectural Sites 199
  6.1 Introduction 199
  6.2 Roofed Facies 199
  6.3 Diachronic Spatial Organization 203
  6.4 Unroofed Facies 204
    6.4.1 How to Recognize an Unroofed Area 204
    6.4.2 Destruction and Abandonment of Buildings 205
    6.4.3 Courtyards, Gardens, and Other Open Spaces 209
6.4.4 Street Deposits 211
6.5 House Pits, Pueblos and Kivas 213
6.5.1 House Pits 213
6.5.2 Plastered Floors from Structure 116 216
6.5.3 Pueblos and Kivas 217
6.6 Tombs 218
6.7 Monumental Earthen Structures 219
6.8 Concluding Remarks 221

7 Some Approaches to Field Sediment Study 223
7.1 Introduction 223
7.2 Drawing 223
7.3 Photography 224
7.4 Sampling Strategy 225
7.5 Representative Sampling 225
7.5.1 Sampling Methods 225
7.5.2 Number of Samples 226
7.5.3 Size of Samples 227
7.5.4 Micromorphological Sampling 228
7.5.5 Microarchaeological Sampling 229

Concluding Remarks 231
