Abdominal surgery, in cattle, 37f, 97, 98f, 99–100, 99f
abdominal wall, anesthesia for, 21
abnormal milk flow
atresia (imperforate teats), 242
chronic teat fistula repair, 243–244
leaky teats, 243
partial prolapse of teat canal, 242
stenosis of teat orifice, 241
abomasum
abomasal surgery
general considerations, 119, 120f
abomasal surgery, left displaced abomasum
closed suture technique, 127
left side abomasopexy, 119–122, 121f, 129f
omentopexy, pyloro-omentopexy, 122–123, 124f
toggle pin, bar suture method, 126–127
ventral abomasopexy, 124–126, 129f
abomasal surgery, right displaced abomasum, 127–128, 129f
abomasal volvulus (rta), 128–129
abscess
subsolar, 265–266
umbilical, 2, 84, 92
acepromazine, 54
amputation
claw, 261–263, 263f
decaw, 268
limb, 267–268
penile, 213, 224
rectal, 37, 141–143
teat, 244–245, 247
udder, 246
urethral process, 230
analgesics
drugs for, 56
butorphanol, 56
flunixin meglamine, 56
ketamin, 56
meloxicam, 56
morphine, 56
preoperative, 3, 77
anesthesia
epidural (see chapter 4)
action, 40, 42f
administering, 45
anatomy, 39–40, 39f, 40f
cattle, 47–48
caudal epidural, 45
contraindications, 41
lumbar segmental epidural, 44–45, 45f, 46f, 47f
lumbosacral epidural, 47–50
pigs, 48–50
sheep and goats, 44
type, 44
general (see chapter 5)
anesthetic agents, 55–57
barbituates, 55
guaifenesin, 55–57, 60
tiletamine hcl and zolazepam combination (telazol®), 55
common concerns, 61f
commonly used drug combinations, 55–59
drugs
acepromazine, 54
chlorpromazine, 54
detomidine, 55
diazepam, 55
flunixin meglamine, 56
meloxicam, 56
morphine, 56
tolazoline, 55
xylazine, 54
yohimbine, 55
drugs, phenothine-based tranquilizers, 54
general considerations
cattle, 51
pigs, 51
sheep and goats, 51
inhalation anesthesia, 59–62
injectable anesthesia, 51
advantages, 51
disadvantages, 52
drug combinations, 57–58
5-10-20 technique, 58
double drip, 57
im or sq recumbent stun, 58
iv recumbent stun, 58
iv standing stun, 58
ketamine - diazepam, 58
ketamine stun or k-stun, 57
swine, in, 53
telazol® ketamine xylazine (tkx), 57
tkx-ru for ruminants, 57
arthritis, septic
arthrodesis for, 262, 279
joint flushing for, 272
arthrocentesis, 271–272
arthroscopy, 271–273
atresia, teat, 242
auricular vein, anesthesia
administration in, 53, 53f
auriculopalpebral nerve block, 28–30, 78
banding technique, 204–205
bar suture method, for castration, 204–205
bar suture method, for displaced abomasum, 126–127
right and lateral paralumbar standing procedure, 154–156
right and lateral recumbency restraint, 153
symphsiotomy, 160
ventral abdominal paramedian, 156–159
cesarean section, sheep and goats anesthesia, 161
restraint, incision sites, 161
ventral abdominal paramedian, 161–162
cesarean section, sows anesthesia, 164
restraints, incision sites, 163–164, 164f
surgical procedures, right or left incision, 164–166
surgical procedures, ventral abdominal midline incision, 166–167
oophorectomy in cattle indications, general considerations, 145
left paralumbar fossa approach, 145–146, 146f
surgical approaches, 145
vaginal approach, 147–150, 147f, 148f, 149f
third-degree perineal laceration repair anesthesia, 175
general considerations, 175
postoperative care, 176
presurgical procedures, 175
surgical technique, 175–176, 176f
urine pooling, urethral extension to control anesthesia, 177
general considerations, 177
postoperative care, 178
presurgical considerations, 177
surgical technique, 177–178, 178f
vaginal prolapse, cows button and pin technique, 169–170
cervopexy, modified Winkler method, 170–171, 170f, 171f
indications, general considerations, 167–168
modified Caslick’s method, 174, 174f
other techniques, 175
prevention techniques, buried purse-string method, 173–174, 174f
prevention techniques, Patton method, 173, 173f
prevention techniques, shoelace method, 172, 172f
quill suture method, 175, 175f
vaginal retention techniques, modified Minchev method, 168–169, 168f
femoral fracture, 178–279, 279f
femoral nerve block, 30
femoral nerve, injury of, in patellar luxation, 256
fetlock, fracture distal to, 280
fetotomy vs. cesarean section, 151
fibropapilloma of penis, 205
anesthesia, 206
autogenous vaccine preparation, 206
general considerations, 205–206
presurgical procedures, 206
surgical technique, 206
fistula
rumen, 108–112
teat, 243
flushing joint, 272
foot and claw surgery (see chapter 19)
claw amputation, cattle anesthesia, 262, 263f
general considerations, 261–262
postoperative care, 263
presurgical procedures, 263
principle indications, 263
restraint, 263
surgical technique, 263–264, 264f
claw trimming, cattle, 266, 266f
forlimb/hindlimb amputation in cattle, especially calves anesthesia, 267
general considerations, 267
indications, 267
postoperative care, 267
presurgical procedures, 267
surgical technique, 267
transsection sites, 267
general considerations
adjunctive treatment, 261
footrot in sheep, 261
lameness, 261
interdigital fibromas (corns) excision anesthesia, 264, 264f
general considerations, 264
postoperative care, 264
presurgical procedures, 264
surgical technique, 264
restraint, 264
surgical technique, 264, 264f
interdigital foreign bodies, foreign bodies surrounding claw removal, 265
medial dewclaw amputation, rear feet in heifers anesthesia, 268
general considerations, 268
postoperative care, 268
presurgical procedures, 268
surgical technique, 268
subsole abscess surgery, 265–266, 266f
forlimb/hindlimb amputation in cattle, especially calves anesthesia, 267
general considerations, 267
indications, 267
postoperative care, 267
presurgical procedures, 267
surgical technique, 267
transsection sites, 267
femur fracture, dislocations casts, 275, 275f, 276f
coxofemoral luxation, 280
cross-pinning, 276
epiphysial separation, 280
external fixation, 275–276
femur fracture, articular head and neck, 278–279
femur fracture, femoral shaft, 279, 279f
femur fracture, trochanter major, 279
fetlock fracture, 280
general considerations
internal fixation, 275
therapy, ultraconservative, 275
hock fracture, 279
humeral fracture, 275, 278
ilium shaft fracture, 277
ischium fracture, 277
mandible fracture, 280
metacarpus, metatarsus fracture, 278
metatarsel, metacarpal phalangeal dislocation, 280
pubic symphysis fracture, 171, 277
radius, ulnar fracture, 278
rib fracture, 277
scapula fracture, 277–278
tibia fracture, 279
tuber coxae fracture, 277
ulnar, 278
vertebra fracture, 276
frenulum, penile persistent, 197–198
frontal sinuses, trephination of, 68–69
general anesthesia (see chapter 5)
general surgical considerations
postoperative care
first aid, 7
medication, 7–8, 7f
nutrition, 5
wound care, 5–7
preoperative procedure
food, water restriction in elective surgery, 2
monitoring, assessment, 1–2
physical examination, clinical tests, 1
preoperative medications, 2–3
surgical facilities, 2
surgical site preparation
cleansing, 3–4
draping, 4
tail restraint, 4, 4f
genitofemoral nerve block, 30
guaifenesin, 55–57, 60
head and neck surgery (see chapter 6)
cornuectomy, cattle anesthesia, 65
indications, general considerations, 65
head and neck surgery (continued)
materials, 65
presurgical procedures, 65–66
surgical technique, 66
cornuectomy, goats
anesthesia, 68
general considerations, 67–68
surgical techniques, considerations, 68
esophagostomy
anatomic considerations, 71
anesthesia, 72
indications, 71
presurgical procedures, 72
restraint, 72
surgical technique, 72
suturing, 72
general considerations, 69
musculature, subcutaneous tissue, 72
odontology, clinical signs, 69
surgical cornuectomy, cattle
anesthesia, 67
indications, general considerations, 66
materials, 66
preanesthesia, 66
presurgical procedures, 66
surgical technique, 67, 67f
suturing, 67, 67f
surgical technique, 69
tracheotomy
anesthesia, 70
indications, general considerations, 70
postoperative care, 71
presurgical procedures, 70
restraint, 70
surgical technique, 70–71, 71f
trephination of frontal sinuses, cattle
anatomic considerations, 68
anesthesia, 68
indications, general considerations, 68
presurgical procedures, 68
surgical technique, 69
hematoma of penis, bulls
anesthesia, 199
general considerations, 198
postoperative care, 200
presurgical procedures, 198–199
restraint, 199
surgical techniques, 199–200
suturing, 200
hernias, umbilical masses (see chapter 8)
anatomical parts, hernia, 83
cattle, surgical procedures
diaphragmatic herniorrhaphy, 91–92
inguinal (scrotal) herniorrhaphy, mature bulls, 87–91, 88f, 89f, 90f, 92f
inguinal herniorrhaphy after castration, 86–87
umbilical (ventral) herniorrhaphy, 84–86
hernia variations, 83
pigs, surgical procedures
inguinal (scrotal) herniorrhaphy, 93–95, 94f
umbilical (ventral) herniorrhaphy, 92–93, 93f
predisposing conditions, 83
sheep and goats, herniorrhaphy, 95
hindlimb/forlimb amputation in cattle, especially calves
anesthesia, 267
general considerations, 267
indications, 267
postoperative care, 268
restraint, 268
surgical technique, 267
transsection sites, 267
hip, knocked-down (tuber coxae fracture), 277
hock fracture, 279
hock twitch, 12, 12f, 31
hog holder, 12, 12f, 53, 186
horn, nerve block for removal of (see cornuectomy)
humeral fracture, 275, 278
intestinal obstruction, surgical treatment
common clinical signs, 133–134
intestinal laceration, evisceration trauma, 135
resection and anastomosis for intussusception of jejunum in cattle
anesthesia, 134
initial evaluation, 134
postoperative care, 135
presurgical procedures, 134
restraint, 134
surgical technique, 134, 135f
suturing, 135
spermatic cord–induced incarceration surgery, steers
anesthesia, 135
clinical signs, 135
etiology, 135
postoperative care, 136
presurgical procedures, 135
restraint, 135
surgical technique, 136
suturing, 136
terminology, 133
typhlectasis, with/without torsion
anesthesia, 137
cornuectomy, partial cornuectomy, 137, 137f
general considerations, 136
postoperative care, 137
presurgical procedures, 136
restraint, 136
suturing, 137
intravenous anesthesia, 51
intubation
endotracheal for anesthesia, 81
tracheotomy for, 71, 71f
intussusception, intestinal, 133–134
inverted L palalumbar nerve block, 23, 23f
ischial fracture, 277
isoflurane, 60
jejunum, intussusception of, 133–134
johnson button and pin technique, for vaginal prolapse, 169–170
joint capsule imbrication, suspected ACL rupture cases, 258f
anesthesia, 258
general considerations, 258
postoperative care, 259
presurgical procedures, 258
restraint, 258
surgical technique, 258–259
joint surgery
arthrocentesis, 271–272
arthrodasis, 273–274
general considerations, joint effusion, 271
joint flushing, 272
meniscal tears, 274
keractectomy for corneal plaques, 77–78
ketamine, 57–58
kicking prevention
hock twitch, 12, 13f, 31
rope squeeze restraint, 13, 13f
kimberling-rupp technique, for
ophorectomy
knocked-down hip (tuber coxae fracture), 277

lacerations
intestinal, 135
penile and preputial, 201
perineal, 175–176, 176f
tendon, 233–236, 234f, 236f
lactoliths, 239
lameness, 261
laparotomy, cattle
abdominal surgery
general considerations, 97
incision technique (left or right paralumbar region), 97, 97f, 98f, 99f
presurgical procedures, 97
restraint, 97
suturing, 99–100
exploratory laparotomy
anesthesia, 102
common indications, 100–101
general considerations, 100, 100f, 101f, 102f
postoperative care, 103
presurgical procedures, 101
restraints, 101
surgical technique, 102–103
suturing, 103

leaky teats, 243
left side abomasopexy
advantages, 119, 129f
anesthesia, 121
disadvantages, 120, 129f
postoperative care, 122
presurgical procedures, 120
restraint, 120
surgical technique, 121–122, 121f

ligament, tendon surgery
contracted tendons
etiology, 253
prognosis, 253
splitting without surgery, 253–254
surgery and splitting, 254–255
joint capsule imbrication, suspected
ACL rupture cases, 258f
anesthesia, 258
general considerations, 258
postoperative care, 259
presurgical procedures, 258
restraint, 258
surgical technique, 258–259

ligament surgery
anesthesia, 257
clinical signs, 256
general conditions, 256
postoperative care, 258
presurgical procedures, 256
recovery observations, 258
anesthesia, 257, 257f
medial patellar desmotomy, upward
fixation treatment
anesthesia, 259
general considerations, 259
postoperative care, 259
presurgical procedures, 259
restraint, 259
surgical technique, 259
penile dorsal ligament reattachment for
development, 193, 193f, 194f, 195–196

tendon laceration
general considerations, 255
postoperative care, 256
treatment, 255–256
local and regional anesthesia (see
anesthesia, local and regional; chapter 3)
lumbar paravertebral nerve blocks
distal, 22, 22f
proximal, 19–20, 21f
lumbar segmental epidural anesthesia, 22
lumbosacral epidural anesthesia, 40,
178, 186, 234
male reproductive system, surgery
(see chapter 15)
castration
anesthesia, 184
common methods, 184
emasculatome (Hauptner) use, 187,
188f
indications, general considerations, 183
testectomy, cattle, 184–185
testectomy, goats, 186–187
testectomy, mature boars, 186
testectomy, piglets and young boars,
185–186
testectomy, sheep, 186–187
circumcision
anesthesia, 201
indications, general considerations, 200–201
penile, preputial lacerations, 201
postoperative care, 204–205
presurgical procedures, 201
restraint, 201
surgical technique, 202–204, 202f,
203f, 204f, 205f

cryptorchidism
dorsal position (preferred), 189–190
introduction, 188–189
standing technique, 189
surgical technique, 189
ectopic testicle, bulls, 189–190
fibropapilloma excision
anesthesia, 206
autogenous vaccine preparation, 206
general considerations, 205–206
presurgical procedures, 206
surgical technique, 206
hematoma of penis, bulls
anesthesia, 199
general considerations, 198
postoperative care, 200
presurgical procedures, 198–199
restraint, 199
surgical techniques, 199–200
suturing, 200
penile, preputial conditions in bulls
endogenous, 192
exogenous, 192
persistent frenulum
anesthesia, 198
general considerations, 197
postoperative care, 198
restraint, 198
surgical technique, 198
phallicrurry, ventral and spiral
 deviations correction
anesthesia, 193
general considerations, 192
postoperative care, 197
presurgical procedures, 192
restraint, 192
surgical technique, spiral, 195–197,
196f
surgical technique, ventral, 193,
193f, 194f, 195f
suturing, 196, 197f
phimosis
postoperative care, 205
presurgical procedures, 205
surgical technique, 205
preputial diverticulum extirpation, boars
anesthesia, 208
diverticulum anatomy, 207, 208f
diverticulum physiology, 207–208
diverticulum removal, through
preputial orifice, 209–210
general considerations, 207
indications, 208
postoperative care, 209–210
presurgical procedures, 208
restraint, 208
surgical technique, 209, 209f
scirrhous cord removal, pigs (barrows),
191
scirrhous cord removal, steers, 190–191
teaser bulls, boars and rams surgical
preparation
common techniques, 213
general considerations, 210–211
penectomy, 214–215
penile extension prevention, selected
surgery, 211–214, 212f
male reproductive system, surgery (continued)
semen flow blocking, epididymectomy, 215–216
semen flow blocking, vasectomy, 216–218, 217f

mammary surgery (see chapter 17)
amnonormal milk flow
atresia (imperforate teats), 242
fistula repair, 243
leaky teats, 243
partial prolapse of teat canal, 242
stenosis of teat orifice, 241
blind quaters, blind teats, 239–240
calculi, lactolith removal, 239

general considerations, 233
obstructed teat treatment

general considerations, 236–237, 236f, 237f
polyph removal via teat (streak) canal, 237–238
spider teat treatment, 239
successful teat surgery, basics, 233
surgical removal of polyps via open teat surgery, 238–239

teat amputation
nonaccessory teats, 245–246
supernumerary teat removal, 244–245, 245f

teat laceration repair
anesthesia, 235
general considerations, 233–234, 234f
postoperative care, 236
presurgical procedures, 235
restraint, 234–235
surgical technique, 235–236, 236f
teat injuries, first aid, 235

mechanical restraint
cage, rotary tables, 17
chutes for cattle, 17
flat tables, 17–18
lateral recumbency restraint, young calf, 16, 17f
sideline restraint, 16, 17f

medial dewclaw amputation, rear feet in heifers
anesthesia, 268
general considerations, 268
postoperative care, 268
presurgical procedures, 268
surgical technique, 268

medial patellar desmotomy, upward fixation treatment
anesthesia, 259
general considerations, 259
postoperative care, 259
presurgical procedures, 259
restraint, 259
surgical technique, 259
membrane nictitans carcinoma of, 76
meniscal tears, 274
metacarpal fractures, 278

metacarpal joint dislocations, 280
metatarsal dislocation, 280
metatarsal fractures, 278
metatarsophalangeal joint dislocations, 280
modified Minchev method, 168–169, 168f
muscolar layer resection technique, for rectal prolapse, 140–141, 141f

neck surgery (see chapter 6)
conneuctomy in goats, 68–70
esophagostomy in cattle, 71–72
surgical cornuectomy in cattle, 65–66
suturing, 72
tracheotomy in cattle, 72
trephination of frontal sinuses, 68–69

nerve blocks
auriculopalpebral, 30
cornual, 25–26, 26f, 27f
distal limb, 24–25
femoral, 30
genitofemoral, 30
hemorrhoidal, 35, 42f
illocchymal, 42f
infraorbital, 26
obturator, 42f
paralumbar inverted L, 23, 23f
paravertebral

distal lumbar, 19–22, 20f, 21f
proximal lumbar, 21
Peterson, 28
pudendal, 33, 35, 192
retrobulbar, 29–30, 29f
sacral, 33–35, 33f, 35f
subsaclar, 33–35, 33f, 35f

patella
upward fixation of, medial patellar desmotomy for, 259
patellar ligament, medial, prosthesis
256–257

Patton method, for vaginal retention, 173, 173f
pelvis
fractures of, 309
splitting of (symphysiotomy), 171, 277
penile, preputial conditions in bulls
endogenous, 192
exogenous, 192
penis
amputation of, 215, 220
circumcision of, 201–205, 202f, 203f, 204f, 205f
development of, 194–195
fibropapilloma of, 192, 301
hematoma of, 192, 301
lacerations of, 201
persistent frenulum of, 197
phallectomy of, 192–193
phimosis of, 205
translation of, for teaser preparation, 211–212
pericardiectomy, traumatic pericarditis correction
anesthesia, 114
draping, 114
initial evaluation, 113–114
materials, 114
postoperative care, 116
presurgical procedures, 114
surgery feasibility, 113
surgical technique, 115
suturing, 116
perineal artery and vein, ligation of, for udder sloughing, 175–176, 176f
perineal laceration, 175–176, 176f
persistent frenulum
anesthesia, 198
general considerations, 197
postoperative care, 198
rectal rings, 142, 143f
rectal tenesmus alleviation, 142
rectopoxy, 142
restraint, 139–140
simple replacement, 140
site preparation, 140
types, 139, 139f
retrobulbar nerve block, 29–30, 29f
reuff's double half hitch, 16, 16f
rib fractures, 277
ring block, 31, 31f
ring, rectal, for prolapse, 142, 143f
rope squeeze restraint, 13, 13f
rubber bands, for castration, 142
rumen cannulation, permanent
anesthesia, 112
general considerations, 112
postoperative care, 112
surgical technique, 112
surgical technique, 112–113
rumen fistula, creation of temporary
anatomic considerations, 109
anesthesia, 109
gas removal, draping, 109
general considerations, 108
presurgical procedures, 108
surgical procedures, 109
surgical technique, 109, 109f, 110f, 111–112, 111f
rumenotomy
anesthesia, 105
indications, 105
laparotomy, 105–106
postoperative care, 108
surgical procedures, 105
restraint, 105
surgical technique, 106–108, 106f, 107f
suturing, 108
sacral paravertebral nerve blocks, 33–35, 33f, 35f
scapular fracture, 310
scirrhouss cord removal
pigs (barrows), 191
steers, 190–191
scrotal hernia
after castration, in cattle, 96–87
in pigs, 93–95, 94f
semen, blockage of, in teaser animals, 215–218, 217f
septic arthritis
arthrodesis for joint flushing, 272
shoelace method, for vaginal prolapse, 172, 172f
sinuses, frontal, trephination of, 68–69
spider teat treatment, 239
spinal anesthesia (see anesthesia, epidural)
spinal fractures, 276
splints
for contracted tendons, 253
for fractures, 253
squamous cell carcinoma of eye, 75–80
stenosis of teat orifice, 241
suboccipital paravertebral nerve blocks, 33–37, 33f, 35f
subsolr abscess surgery, 265–266, 266f
successful teat surgery, basics, 233
supernumerary teat removal, 244–245, 245f
surgical removal of polyps via open teat surgery, 238–239
surgical restraint
casting cattle methods, Burley, double half hitch, 15, 15f
dverting animal's attention techniques
nasal septum grasping, 11
nose lead, 11, 12f
snubbing rope, hog holder, 12, 12f
tail jack, 11f
general considerations, 11
kicking prevention
hock twitch, 12, 13f, 31
rope squeeze restraint, 13, 13f
mechanical restraint
cage, rotary tables, 17
chutes for cattle, 17
flat tables, 17–18
other restraints
lateral recumbency restraint, young calf, 16, 17f
sideline restraint, 16, 17f
raising leg, cattle
front leg hobble, 13
raising front leg manually, 14
raising rear leg manually, 14
restraining tail, cattle
tail rope, 15
tail-to-leg tie, 15
symphysiostomy, 171, 277
table restraints, 17–18
tail restraint, 4, 4f, 15, 11f
teaser bulls, boars and rams surgical preparation
common techniques, 213
general considerations, 210–211
penectomy, 214–215
penile extension prevention, selected surgery, 211–214, 212f
semen flow blocking, epididymectomy, 215–216
semen flow blocking, vasectomy, 216–218, 217f
teat amputation
nonaccessory teats, 245–246
supernumerary teat removal, 244–245, 245f
teat atresia (imperforate teats), 242
teat injuries, first aid, 235
teat laceration repair
anesthesia, 235
general considerations, 233–234, 234f
postoperative care, 236
typhlectasis, 136–137, 137

tympany, rumen fistula for, 108

tuber coxae fracture, 277

tube cystostomy, 225–227, 225

trimming claws, 266, 266

trephination, of frontal sinuses, 68–69

toggle pin method, for displacement

tiletamine, 55
