and Southern Company, U.S., 140, 146–147, 148, 153
stability mode (RMS mode), 188, 189, 190
and TSA tool, 148, 153
use by SIME, 354, 358, 388, 389
Total transfer capability (TTC), 14, 27
Transelectrica S.A., Romania, 101–127. See also DEN (National Dispatch Center), Romania
DEN electricity market diagram, 102, 103
role in Romanian electricity market, 102, 103
Romanian power system organization, 101–102
Romanian stability-constrained transmission corridors, 110–112
SCADA/EMS, 104–107
security assessment, 107–113
Transelectrica S.A. (continued)
steady-state stability assessment, 108–112
transmission system map, 102, 103
transmission system overview, 101–103
Transient security assessment
case studies in integrating DSA into
SCADA/EMS, 191–212
defined, 26
and Kuwait power system, 192, 194–196, 197, 198–200
and NEMMCO power system, Australia, 222–223, 224–238
overview, 28–29
Siemens’ DSA tool for SCADA/EMS
platform, 188–190, 203
solution times, 20
and Southern Company, U.S., 137, 143, 145–151, 148–149, 150
Transient stability limit (TSL), 28–30, 37, 91–94
Transient-oscillations damping, 375–382
Transmission reliability margin (TRM), 27
TSA. See transient stability analysis (TSA)
TSAT (Transient Security Assessment Tool), 132, 148–150, 151, 153–154
TSL (transient stability limit), 28–30, 37, 91–94
TTC (total transfer capability), 14, 27
UCTE (European Union for the Coordination and Transmission of Electricity)
planning study on dynamic security assessment, 191, 207–212
relationship to Moroccan power system, 200, 201
relationship to NOS BiH operation, 73
relationship to Transelectrica, Romania, 101, 102, 106
UIB (Utility Information Bus), 48
Ungureanu, B., 33
United States. See Long Island Power Authority (LIPA), United States;
Southern Company, United States
UNO-DEN. See DEN (National Dispatch Center), Romania
User interfaces
Brazilian SDSA, 176–179
Kuwait power system, 198–200
Morocco power system, 205–207
for stability assessment data, 18–19
Swedish National Grid, 288–290
Utility Information Bus (UIB), 48
Van Cutsem, T., 33
Venikov, V.A., 30, 31, 35–36, 329, 404, 408–409
Voltage security assessment
ASTRE software, 255–256
compared with static security assessment, 250
and Hellenic Interconnected System, 253–271
and Long Island Power Authority, 55–56
and NEMMCO power system, Australia, 222
stability after contingencies, 250–251
and Swedish National Grid, 291–302
using to arm load-shedding protection, 264–271
WPSTAB software, 256
Voltage stability. See also steady-state stability; voltage security assessment
causes of instability, 249–250
compared with voltage security assessment, 30, 249–250
controls against instability, 250
defined, 26, 249

generator representation, 30–33
limits, 30–34
load-flow modeling, 30–34
and Long Island Power Authority, 57–58
overview, 249–250
role in determining system security, 96–100
