Index

Page numbers in *italics* refer to figures; page numbers in **bold** refer to tables.

activated sludge  85–6, 91
Agent Orange  142
air see atmosphere; indoor air
Arctic ecosystem
  biomagnification of PFCs  39
  food webs  100, 103–4, 105
  levels of BFRs  11, 15
  POPs in Polynya invertebrates  94
  sources of PFCs  50, 51
atmosphere
  see also indoor air; volatilization
  air-surface exchange  85, 111–16, 175, 185, 189
  downwind contamination, from cities  190, 191, 246–7, 258
  long-range POP transport  11, 15, 50–1, 185
  observed BFR concentrations  218–19
  observed PFC concentrations  51–2, 222
  rural and urban contamination  177, 179–82, 185–6, 247–8
  sampling and analysis  41, 42, 148–50
BDEs see polybrominated diphenyl ethers (PBDEs)
bioaccumulation
  food chain/web magnification  13, 39, 244, 249–50
  and metabolic debromination (PDBEs)  258
  in human milk  12–13, 13, 109, 155
  from plants  92
  potential estimation, by lipophilicity  10–11, 11
  in wildlife  14–15, 38–9, 56–8, 100, 101
biotransformation  73, 258
  by macroorganisms
    aquatic mammals  100–5
    birds and eggs  98–100
    fish  38, 95–8
    invertebrates  94–5
    plants  91–2
    terrestrial mammals  105–9
microbial
  in natural waters  83–5
  in soils and sediments  86–91, 92–3, 111, 191
  in wastewater/activated sludge  85–6
  rate determination  109–11
birds
  detoxification of POPs  98–9
  POP residue composition in eggs  57, 58, 99–100
bivalves
  biotransformation abilities  94–5
  Mussel Watch programmes (POP monitoring)  154–5, 157
breast milk
  bioaccumulation of POPs  12–13, 13, 109, 155
  geographical analysis of POPs  158, 158–9, 258–9
brominated flame retardants (BFRs)
  see also hexabromocyclododecane (HBCD/HBCDD); polybrominated diphenyl ethers (PBDEs);
tetabromobisphenol-A (TBBP-A)
bioaccumulation  10–11, 11, 12–15, 103, 258
chirality  78–9, 80
brominated flame retardants (BFRs) (Continued) contamination
air 218–19
indoor dust 220–1, 259
emission mechanisms 216
human intake 15–17, 224–5, 258–60
measurement and analysis 8–10, 9, 215
pollutant sources 7, 15, 215–17, 230–1
production and demand 5, 6, 254–7, 256
regulation of 5–7, 12–13, 260–1
toxicity 12, 17, 260
types and applications 5, 10, 215, 254
method of product incorporation 212–13
butter, for POP assessment 150, 150–1
carcinogenic activity 12, 32
cetaceans (porpoises/whales), POP metabolism capacity 103–5
chemical interactions, in urban environment 188–91, 197
chirality
composition reporting metrics (ER/EF) 81–2
effect on toxicity 72
enantioselective measurement 72, 79–81
extent, in POPs 71
for identifying pollutant source 111–16
in measurement of biotransformation 109–11, 117–18
chlordanes 73–4
environmental contamination 86–7, 87, 148, 177, 178
in seal tissues 100–1
soil persistence, variability 92, 92–3
stereoisomer structures 76
uptake by plants 91–2
Clausius-Clapeyron equation 186
combustion emissions
landfill and urban open fires 143, 145, 175
residential heating 174
vehicle fuel 174, 194
consumer products, as emissions source 174–5, 215–17, 245, 254–7
cytochrome P450 (CYP) activity, in biotransformation 97, 103, 106, 107
debromination to toxic congeners 18, 260
determination and analysis 8
dust contamination mechanisms 216
molecular structure 6
degradation of POPs 11, 83, 116–17, 188–91, 213
see also biotransformation
developing countries
continuing emission of legacy POPs 138
data on environmental contamination 147–8, 161
industrialization 138, 173
POP problems (compared to developed countries)
effective regulation 160
financial and technical constraints 159–60
information and understanding 160–1
stockpiled pesticides 139–40, 160
working standards, environmental 145, 258
dichlorodiphenyltrichloroethane (DDT)
chemical structure 74
continuing use
detected by mussel monitoring 155
for public health 139, 148
environmental contamination 177, 182
persistence in soils and sediments 88, 112, 113, 154
dietary intake
of BFRs, from fish/shellfish 15–16, 259
estimates of PFCs 227
from food processing/packaging 48–9, 259–60
rate of decline, after POP ban 250–3
dioxins/furans (PCDD/Fs) 141–2
from vehicles 174, 194
from waste combustion 145, 159, 175, 176
dumping, illegal 141, 146

dust, indoor
BFR contamination 7, 220–1, 259
dust loading and dilution 227–8, 229
human exposure 224–5, 226
disposal pathways 244
microspatial variation 231, 232–3, 233
PCB contamination 214, 214–15, 226
PFC contamination 223, 226–7
sampling methods 210–12
education, for POP obligations 160–1
eggs, as biomonitoring tool 99–100
Index

273

electrochemical fluorination (ECF process) 28–9, 50
electronic equipment
BFR emissions during use 215–16
e-waste (WEEE), as source of BFR pollution 7, 144–5, 146–7, 254–5, 258
production rate 246, 254
emissions from additive and reactive products 212–13
mechanisms of BFR release 216
point and diffuse sources 173, 228–31
rate studies, for risk assessment 197
urban sources 173–5, 189, 192, 246–7
enantiomer ratio/fraction (ER/EF) 81–2
used for pollutant source signatures 111, 186–7
endocrine effects of PDBEs 12, 17
of PFCs 32
endosulfan, geographical distribution 148
environmental contamination see also bioaccumulation; persistence
accidental spillage 39, 49–50, 53
aquatic sediment records 13–14, 55–6, 86–91, 151
biochemical weathering 73, 82, 93, 109–11
data comparison problems 147–8
long-range transport 11, 15, 50–1, 185
monitoring long-term POP removal 15, 118
near municipal dumpsites 145–6, 146
in oceans, variation with depth 85
remediation 197–8
sources of BFRs 7, 15
sources of PFCs 49–51
transfer from indoor sources 243–4
urban areas 172–5, 185–7, 189, 191–3, 192

fish
biotransformation capability 95–8
as dietary BFR source 15–16, 259
as dietary PCB source 253
health, and POP contamination 191, 193
fluorinated polymers, structure 28
fluorine
atomic and bonding properties 33–4
measurement, total organic 46
fluorotelomer alcohols (FTOHs) analysis 44–5, 55
bioaccumulation and persistence 38, 40, 41, 50–1
environmental sources and levels 49–50, 57
atmosphere 51–2
production 30
properties 34, 35–6, 37, 38, 39
structure 25, 27
toxicity 32
fluorotelomer carboxylic acids (/carboxylates) (FTCAs)
analysis 42, 43, 45
environmental presence 38, 52–3, 55, 57
structure 27–8
toxicity 33
unsaturated (FTUCAs) 27–8
fluorotelomer sulfonic acids (/sulfonates) (FTSs)
analysis 42, 44, 47
environmental contamination 53
structure 28
forensics, detection of illegal chemical use 91
furs see dioxins/furans (PCDD/Fs)

GC-MS analysis
for measurement of BFRs 8–9
for volatile PFC measurement 44–5

Global Atmospheric Passive Samplers (GAPS) study 148–50, 149, 150

health quality, in urban areas 196
hepatic metabolism, effects of PFCs 31–2
heptachlor epoxide 74, 76

hexabromocyclododecane (HBCD/HBCDD) additive product incorporation 212–13
determination and analysis 9–10, 117
environmental persistence 11, 86, 114, 213
metabolism, in higher organisms 98, 100, 104–5
molecular structures 6, 79, 80
hexachlorobenzene (HCB) 142–3
hexachlorocyclohexane (HCH) α-HCH atmospheric sources 85, 115–16, 148
bioaccumulation, in seals 101, 102
enantioselective blood-brain transfer 98, 101, 106
microbial degradation 83–5, 86
γ-HCH (lindane) 73, 139, 148
soil concentrations 154
structures, chirality 75
technical, isomeric composition 73

household dust see dust, indoor
perfluoroalkyl compounds see perfluorinated chemicals (PFCs)

perfluoroalkylsulfonic acids (/sulfonates) (PFSAs)

see also perfluorooctane sulfonate (PFOS)

bioaccumulation 39, 47, 48, 49, 56–7
environmental presence and persistence 38, 40, 50–1, 52, 56
water contamination 38, 53–5
extraction and analysis 41, 42, 43, 45, 47
production 29, 30–1
properties 34, 35–6, 36–7, 38, 44
structure 27
toxicity 31–2

perfluorocarboxylic acids (/carboxylates) (PFCAs)

see also perfluorooctane carboxylic acid (PFOA)

analysis 41, 42, 43, 45, 46
bioaccumulation 39, 47, 48, 49, 56–7
environmental presence
persistence 40, 57–8
water contamination 38, 53–5
production 29, 30, 31
properties 34, 35–6, 36–7
structure 27
toxicity 31–2

perfluorooctane carboxylic acid (PFOA)

environmental presence 50, 51, 52, 53–5
human exposure 47, 48, 49
production 29, 30, 31
properties 34, 36, 37, 38
structure 27
toxicity 31–2

perfluorooctane sulfonate (PFOS)

analysis 44, 45, 47
bioaccumulation 39, 47–8, 49, 56, 57–8
environmental presence 40, 51, 52, 53–5, 143
production 29, 30–1
properties 36, 37
structure 27
toxicity 31–2

persistence
in body tissues (PFCs) 31–2
environmental reservoirs of POPs 242, 262
environmental stability (PFCs) 40, 50
monitoring, using enantiomers 110, 113–16
