# CONTENTS

**Preface** | xix  
**Preface to the First Edition** | xxii  

## 1 Introduction

1.1 Risk in Power Systems / 1  
1.2 Basic Concepts of Power System Risk Assessment / 4  
  1.2.1 System Risk Evaluation / 4  
  1.2.2 Data in Risk Evaluation / 6  
  1.2.3 Unit Interruption Cost / 7  
1.3 Outline of the Book / 9  

## 2 Outage Models of System Components

2.1 Introduction / 15  
2.2 Models of Independent Outages / 16  
  2.2.1 Repairable Forced Failure / 17  
  2.2.2 Aging Failure / 18  
  2.2.3 Nonrepairable Chance Failure / 24  
  2.2.4 Planned Outage / 24  
  2.2.5 Semiforced Outage / 27  
  2.2.6 Partial Failure Mode / 28  
  2.2.7 Multiple Failure Mode / 30  
2.3 Models of Dependent Outages / 31  
  2.3.1 Common-Cause Outage / 31  
  2.3.2 Component-Group Outage / 36  
  2.3.3 Station-Originated Outage / 37  
  2.3.4 Cascading Outage / 39  
  2.3.5 Environment-Dependent Failure / 40  
2.4 Conclusions / 42
3 Parameter Estimation in Outage Models 45

3.1 Introduction / 45
3.2 Point Estimation on Mean and Variance of Failure Data / 46
  3.2.1 Sample Mean / 46
  3.2.2 Sample Variance / 48
3.3 Interval Estimation on Mean and Variance of Failure Data / 49
  3.3.1 General Concept of Confidence Interval / 49
  3.3.2 Confidence Interval of Mean / 50
  3.3.3 Confidence Interval of Variance / 53
3.4 Estimating Failure Frequency of Individual Components / 54
  3.4.1 Point Estimation / 54
  3.4.2 Interval Estimation / 55
3.5 Estimating Probability from a Binomial Distribution / 56
3.6 Experimental Distribution of Failure Data and Its Test / 57
  3.6.1 Experimental Distribution of Failure Data / 58
  3.6.2 Test of Experimental Distribution / 59
3.7 Estimating Parameters in Aging Failure Models / 60
  3.7.1 Mean Life and Its Standard Deviation in the Normal Model / 61
  3.7.2 Shape and Scale Parameters in the Weibull Model / 63
  3.7.3 Example / 66
3.8 Conclusions / 70

4 Elements of Risk Evaluation Methods 73

4.1 Introduction / 73
4.2 Methods for Simple Systems / 74
  4.2.1 Probability Convolution / 74
  4.2.2 Series and Parallel Networks / 75
  4.2.3 Minimum Cutsets / 78
  4.2.4 Markov Equations / 79
  4.2.5 Frequency-Duration Approaches / 81
4.3 Methods for Complex Systems / 84
  4.3.1 State Enumeration / 84
  4.3.2 Nonsequential Monte Carlo Simulation / 87
  4.3.3 Sequential Monte Carlo Simulation / 89
4.4 Correlation Models in Risk Evaluation / 91
  4.4.1 Correlation Measures / 92
  4.4.2 Correlation Matrix Methods / 93
  4.4.3 Copula Functions / 95
4.5 Conclusions / 102
5 Risk Evaluation Techniques for Power Systems 105

5.1 Introduction / 105
5.2 Techniques Used in Generation-Demand Systems / 106
  5.2.1 Convolution Technique / 106
  5.2.2 State Sampling Method / 110
  5.2.3 State Duration Sampling Method / 112
5.3 Techniques Used in Radial Distribution Systems / 114
  5.3.1 Analytical Technique / 114
  5.3.2 State Duration Sampling Method / 117
5.4 Techniques Used in Substation Configurations / 118
  5.4.1 Failure Modes and Modeling / 119
  5.4.2 Connectivity Identification / 121
  5.4.3 Stratified State Enumeration Method / 123
  5.4.4 State Duration Sampling Method / 127
5.5 Techniques Used in Composite Generation and Transmission Systems / 129
  5.5.1 Basic Procedure / 130
  5.5.2 Component Failure Models / 131
  5.5.3 Load Curve Models / 131
  5.5.4 Contingency Analysis / 133
  5.5.5 Optimization Models for Load Curtailments / 135
  5.5.6 State Enumeration Method / 138
  5.5.7 State Sampling Method / 139
5.6 Conclusions / 141

6 Application of Risk Evaluation to Transmission Development Planning 143

6.1 Introduction / 143
6.2 Concept of Probabilistic Planning / 144
  6.2.1 Basic Procedure / 144
  6.2.2 Cost Analysis / 145
  6.2.3 Present Value / 146
6.3 Risk Evaluation Approach / 146
  6.3.1 Risk Evaluation Procedure / 147
  6.3.2 Risk Cost Model / 147
6.4 Example 1: Selecting the Lowest-Cost Planning Alternative / 149
  6.4.1 System Description / 149
  6.4.2 Planning Alternatives / 151
  6.4.3 Risk Evaluation / 152
  6.4.4 Overall Economic Analysis / 155
  6.4.5 Summary / 157
6.5 Example 2: Applying Different Planning Criteria / 158
   6.5.1 System and Planning Alternatives / 158
   6.5.2 Study Conditions and Data / 159
   6.5.3 Risk and Risk Cost Evaluation / 161
   6.5.4 Overall Economic Analysis / 163
   6.5.5 Summary / 166
6.6 Conclusions / 167

7 Application of Risk Evaluation to Transmission Operation Planning / 169
   7.1 Introduction / 169
   7.2 Concept of Risk Evaluation in Operation Planning / 170
   7.3 Risk Evaluation Method / 173
   7.4 Example 1: Determining the Lowest-Risk Operation Mode / 175
      7.4.1 System and Study Conditions / 175
      7.4.2 Assessing Impacts of Load Transfer / 177
      7.4.3 Comparing Different Reconfigurations / 177
      7.4.4 Selecting Operation Mode under the N−2 Condition / 179
      7.4.5 Summary / 181
   7.5 Example 2: A Simple Case by Hand Calculation / 181
      7.5.1 Basic Concept / 181
      7.5.2 Case Description / 182
      7.5.3 Study Conditions and Data / 183
      7.5.4 Risk Evaluation / 185
      7.5.5 Summary / 188
   7.6 Conclusions / 188

8 Application of Risk Evaluation to Generation Source Planning / 191
   8.1 Introduction / 191
   8.2 Procedure of Reliability Planning / 192
   8.3 Simulation of Generation and Risk Costs / 193
      8.3.1 Simulation Approach / 193
      8.3.2 Minimization Cost Model / 194
      8.3.3 Expected Generation and Risk Costs / 195
   8.4 Example 1: Selecting Location and Size of Cogenerators / 196
      8.4.1 Basic Concept / 196
      8.4.2 System and Cogeneration Candidates / 197
      8.4.3 Risk Sensitivity Analysis / 199
      8.4.4 Maximum Benefit Analysis / 201
      8.4.5 Summary / 205
8.5 Example 2: Making a Decision to Retire a Local Generation Plant / 205
8.5.1 Case Description / 206
8.5.2 Risk Evaluation / 206
8.5.3 Total Cost Analysis / 208
8.5.4 Summary / 210
8.6 Conclusions / 210

9 Application of Risk Evaluation to Selecting Substation Configurations
9.1 Introduction / 211
9.2 Load Curtailment Model / 212
9.3 Risk Evaluation Approach / 215
  9.3.1 Component Failure Models / 215
  9.3.2 Procedure of Risk Evaluation / 215
  9.3.3 Economic Analysis Method / 216
9.4 Example 1: Selecting Substation Configuration / 217
  9.4.1 Two Substation Configurations / 217
  9.4.2 Risk Evaluation / 218
  9.4.3 Economic Analysis / 222
  9.4.4 Summary / 223
9.5 Example 2: Evaluating Effects of Substation Configuration Changes / 223
  9.5.1 Simplified Model for Evaluating Substation Configurations / 223
  9.5.2 Problem Description / 224
  9.5.3 Risk Evaluation / 227
  9.5.4 Summary / 228
9.6 Example 3: Selecting Transmission Line Arrangement Associated with Substations / 229
  9.6.1 Description of Two Options / 229
  9.6.2 Risk Evaluation and Economic Analysis / 230
  9.6.3 Summary / 233
9.7 Conclusions / 233

10 Application of Risk Evaluation to Renewable Energy Systems
10.1 Introduction / 235
10.2 Risk Evaluation of Wind Turbine Power Converter System (WTPCS) / 237
  10.2.1 Basic Concepts / 237
10.2.2 Power Losses and Temperatures of WTPCS Components / 238
10.2.3 Risk Evaluation of WTPCS / 240
10.2.4 Case Study / 245
10.2.5 Summary / 251
10.3 Risk Evaluation of Photovoltaic Power Systems / 251
10.3.1 Two Basic Structures of Photovoltaic Power Systems / 251
10.3.2 Risk Parameters of Photovoltaic Inverters / 254
10.3.3 Risk Evaluation of Photovoltaic Power System / 258
10.3.4 Case Study / 263
10.3.5 Summary / 270
10.4 Conclusions / 272

11 Application of Risk Evaluation to Composite Systems with Renewable Sources 275
11.1 Introduction / 275
11.2 Risk Assessment of a Composite System with Wind Farms and Solar Power Stations / 276
11.2.1 Probability Models of Renewable Sources and Bus Load Curves / 276
11.2.2 Multiple Correlations among Renewable Sources and Bus/Regional Loads / 279
11.2.3 Risk Assessment Considering Multiple Correlations / 282
11.2.4 Case Study / 283
11.2.5 Summary / 295
11.3 Determination of Transfer Capability Required by Wind Generation / 296
11.3.1 System, Conditions, and Method / 296
11.3.2 Wind Generation Model / 298
11.3.3 Equivalence of Wind Power in Generation Systems / 299
11.3.4 Transfer Capability Required by Wind Generation / 303
11.3.5 Summary / 309
11.4 Conclusions / 310

12 Risk Evaluation of Wide Area Measurement and Control System 313
12.1 Introduction / 313
12.2 Hierarchical Structure and Failure Analysis of WAMCS / 314
12.2.1 Hierarchical Structure of WAMCS / 314
12.2.2 Failure Analysis Technique for WAMCS / 315
12.3 Risk Evaluation of Phasor Measurement Units / 317
  12.3.1 Markov State Models of PMU Modules / 317
  12.3.2 Equivalent Two-State Model of PMU / 324
12.4 Risk Evaluation of Regional Communication Networks in WAMCS / 325
  12.4.1 Classification of Regional Communication Networks / 325
  12.4.2 Survival Mechanisms of Regional Networks / 328
  12.4.3 Risk Evaluation in Two Survival Mechanisms / 329
  12.4.4 Equivalent Two-State Model of a Regional Communication Network / 334
12.5 Risk Evaluation of Backbone Network in WAMCS / 335
  12.5.1 Equivalent Risk Model of Backbone Communication Network / 336
  12.5.2 Risk Evaluation of Optic Fiber System / 337
12.6 Numerical Results / 343
  12.6.1 Risk Indices of PMU / 343
  12.6.2 Risk Indices of Regional Communication Networks / 345
  12.6.3 Risk Indices of the Backbone Communication Network / 347
  12.6.4 Risk Indices of Overall WAMCS / 348
12.7 Conclusions / 349

13 Reliability-Centered Maintenance 351

13.1 Introduction / 351
13.2 Basic Tasks in RCM / 352
  13.2.1 Comparison between Maintenance Alternatives / 352
  13.2.2 Lowest-Risk Maintenance Scheduling / 353
  13.2.3 Predictive Maintenance versus Corrective Maintenance / 353
  13.2.4 Ranking Importance of Components / 354
13.3 Example 1: Transmission Maintenance Scheduling / 355
  13.3.1 Procedure of Transmission Maintenance Planning / 355
  13.3.2 Description of the System and Maintenance Outage / 357
  13.3.3 The Lowest-Risk Schedule of the Cable Replacement / 358
  13.3.4 Summary / 359
13.4 Example 2: Workforce Planning in Maintenance / 360
  13.4.1 Problem Description / 360
  13.4.2 Procedure / 361
  13.4.3 Case Study and Results / 362
  13.4.4 Summary / 363
xiv  CONTENTS

13.5 Example 3: A Simple Case Performed by Hand Calculations / 363
  13.5.1 Case Description / 363
  13.5.2 Study Conditions and Data / 365
  13.5.3 EENS Evaluation / 365
  13.5.4 Summary / 367
13.6 Conclusions / 367

14 Probabilistic Spare-Equipment Analysis 369
  14.1 Introduction / 369
  14.2 Spare-Equipment Analysis Based on Reliability Criteria / 370
    14.2.1 Unavailability of Components / 370
    14.2.2 Group Reliability and Spare-Equipment Analysis / 372
  14.3 Spare-Equipment Analysis Using the Probabilistic Cost Method / 373
    14.3.1 Failure Cost Model / 373
    14.3.2 Unit Failure Cost Estimation / 374
    14.3.3 Annual Investment Cost Model / 375
    14.3.4 Present Value Approach / 375
    14.3.5 Procedure of Spare-Equipment Analysis / 376
  14.4 Example 1: Determining Number and Timing of Spare Transformers / 376
    14.4.1 Transformer Group and Data / 376
    14.4.2 Spare-Transformer Analysis Based on Group Failure Probability / 377
    14.4.3 Spare-Transformer Plans Based on the Probabilistic Cost Model / 378
    14.4.4 Summary / 381
  14.5 Example 2: Determining Redundancy Level of 500 kV Reactors / 381
    14.5.1 Problem Description / 381
    14.5.2 Study Conditions and Data / 383
    14.5.3 Redundancy Analysis / 385
    14.5.4 Summary / 387
  14.6 Conclusions / 387

15 Asset Management Based on Condition Monitoring and Risk Evaluation 389
  15.1 Introduction / 389
  15.2 Maintenance Strategy of Overhead Lines / 390
    15.2.1 Risk Evaluation Using Condition Monitoring Data / 391
    15.2.2 Overhead Line Maintenance Strategy / 397

17.3 Tracing and Locating Voltage Instability Risk for Planning Alternatives / 447
17.4 Case Studies / 448
   17.4.1 Results of the IEEE 14-Bus System / 448
   17.4.2 Results of the 171-Bus Utility System / 453
17.5 Conclusions / 456

18 Probabilistic Transient Stability Assessment / 459
   18.1 Introduction / 459
   18.2 Probabilistic Modeling and Simulation Methods / 460
      18.2.1 Selection of Pre-Fault System States / 460
      18.2.2 Fault Models / 461
      18.2.3 Monte Carlo Simulation of Fault Events / 463
      18.2.4 Transient Stability Simulation / 464
   18.3 Procedure / 464
      18.3.1 Procedure for the First Type of Study / 465
      18.3.2 Procedure for the Second Type of Study / 465
   18.4 Examples / 465
      18.4.1 System Description and Data / 465
      18.4.2 Transfer Limit Calculation in the Columbia River System / 470
      18.4.3 Generation Rejection Requirement in the Peace River System / 472
      18.4.4 Summary / 475
   18.5 Conclusions / 475

Appendix A Basic Probability Concepts / 477
   A.1 Probability Calculation Rules / 477
      A.1.1 Intersection / 477
      A.1.2 Union / 477
      A.1.3 Full Conditional Probability / 478
   A.2 Random Variable and Its Distribution / 478
   A.3 Important Distributions in Risk Evaluation / 479
      A.3.1 Exponential Distribution / 479
      A.3.2 Normal Distribution / 479
      A.3.3 Log-Normal Distribution / 481
      A.3.4 Weibull Distribution / 481
      A.3.5 Gamma Distribution / 482
      A.3.6 Beta Distribution / 483
   A.4 Numerical Characteristics / 483
      A.4.1 Mathematical Expectation / 483
      A.4.2 Variance and Standard Deviation / 484
      A.4.3 Covariance and Correlation Coefficients / 484
A.5 Nonparametric Kernel Density Estimator / 485
  A.5.1 Basic Concept / 485
  A.5.2 Determination of the Bandwidth / 486

Appendix B  Elements of Monte Carlo Simulation  489
  B.1 General Concept / 489
  B.2 Random Number Generators / 490
    B.2.1 Multiplicative Congruent Generator / 490
    B.2.2 Mixed Congruent Generator / 491
  B.3 Inverse Transform Method of Generating Random Variates / 491
  B.4 Important Random Variates in Risk Evaluation / 492
    B.4.1 Exponential Distribution Random Variate / 492
    B.4.2 Normal Distribution Random Variate / 493
    B.4.3 Log-Normal Distribution Random Variate / 494
    B.4.4 Weibull Distribution Random Variate / 494
    B.4.5 Gamma Distribution Random Variate / 495
    B.4.6 Beta Distribution Random Variate / 495

Appendix C  Power Flow Models  497
  C.1 AC Power Flow Models / 497
    C.1.1 Power Flow Equations / 497
    C.1.2 Newton–Raphson Method / 497
    C.1.3 Fast Decoupled Method / 498
  C.2 DC Power Flow Models / 499
    C.2.1 Basic Equation / 499
    C.2.2 Line Flow Equation / 500

Appendix D  Optimization Algorithms  503
  D.1 Simplex Methods for Linear Programming / 503
    D.1.1 Primal Simplex Method / 503
    D.1.2 Dual Simplex Method / 505
  D.2 Interior Point Method for Nonlinear Programming / 506
    D.2.1 Optimality and Feasibility Conditions / 506
    D.2.2 Procedure of the Algorithm / 508

Appendix E  Three Probability Distribution Tables  511
