1 Introduction 1
  1.1 Introduction to the Study of the Aerothermodynamics of Turbomachinery 1
  1.2 Brief Description of the Development of the Numerical Study of the
      Aerothermodynamics of Turbomachinery 2
  1.3 Summary 6
      Further Reading 7

2 Governing Equations Expressed in Non-Orthogonal Curvilinear
Coordinates to Calculate 3D Viscous Fluid Flow in Turbomachinery 9
  2.1 Introduction 9
  2.2 Aerothermodynamics Governing Equations (Navier–Stokes Equations)
      of Turbomachinery 10
  2.3 Viscous and Heat Transfer Terms of Equations 11
      2.3.1 Viscous Stress Tensor 12
      2.3.2 Strain Tensor 13
      2.3.3 Viscous Force 14
      2.3.4 Rates of Work Done by the Viscous Stresses and
          Dissipation Function 14
      2.3.5 Heat Transfer Term 15
  2.4 Examples of Simplification of Viscous and Heat Transfer Terms 15
      2.4.1 Three-Dimensional Flow in Turbomachinery Expressed
          by Using Arbitrary Non-Orthogonal Coordinates 15
      2.4.2 S1 Stream-Surface Flow 17
      2.4.3 S2 Stream-Surface Flow 17
      2.4.4 Annulus Wall Boundary Layer 17
      2.4.5 Three-Dimensional Boundary Layer on Rotating Blade Surface 19
  2.5 Tensor Form of Governing Equations 20
      2.5.1 Continuity Equation 20
      2.5.2 Momentum Equation 20
### 2.5.3 Energy Equation

2.5.4 Entropy Equation

#### 2.6 Integral Form of Governing Equations

2.6.1 Continuity Equation

2.6.2 Momentum Equation

2.6.3 Energy Equation

#### 2.7 A Collection of the Basic Relationships for Non-Orthogonal Coordinates

2.8 Summary

---

### 3 Introduction to Boundary Layer Theory

3.1 Introduction

3.2 General Concepts of the Boundary Layer

3.2.1 Nature of Boundary Layer Flow

3.2.2 Boundary Layer Thicknesses

3.2.3 Transition of the Boundary Layer Regime

3.2.4 Boundary Layer Separation

3.2.5 Thermal Boundary Layer

3.3 Summary

---

### 4 Numerical Solutions of Boundary Layer Differential Equations

4.1 Introduction

4.2 Boundary Layer Equations Expressed in Partial Differential Form

4.2.1 Two-Dimensional Laminar Boundary Layer Equations

4.2.2 Laminar Boundary Layer Equations of Axisymmetrical Flow

4.2.3 Turbulent Boundary Layer Equations

4.2.4 Boundary Conditions of Solution

4.3 Numerical Solution of the Boundary Layer Differential Equations for a Cascade on the Stream Surface of Revolution

4.3.1 Boundary Layer Equations of S1 Stream Surface Flow of Revolution and Their Solution

4.3.2 Turbulence Modeling

4.4 Calculation Results and Validations

4.4.1 Laminar Boundary Layer Calculation Example

4.4.2 Turbulent Boundary Layer with Favorable Pressure Gradient

4.4.3 Turbulent Boundary Layer with Adverse Pressure Gradient (Ludweig and Tillmann)

4.4.4 Turbulent Boundary Layer with Favorable Pressure Gradient (Bell)

4.4.5 Turbulent Boundary Layer with Adverse Pressure Gradient (Schubauer and Spangenberg)

4.5 Application to Analysis of the Performance of Turbomachinery Blade Cascades

4.5.1 Boundary Layer Momentum Thickness (Bammert’s Experiment)

4.5.2 Laminar Boundary Layer Prediction (Turbine and Compressor Blade Profiles)

4.5.3 Laminar-Turbulent Boundary Layer Prediction

4.5.4 Turbulent Viscosity Prediction
4.5.5 Stagger Angle Effect (C4) 53
4.5.6 Effect of Incidence Angle on Blade Loss Coefficient (C4) 55
4.5.7 Effect of Reynolds Number on the Loss Coefficient of Compressor Blade Cascades (C4) 55
4.5.8 Effect of Stream Sheet Thickness on Boundary Layer Momentum Thickness (Turbine Blade) 55

4.6 Summary 57

5 Approximate Calculations Using Integral Boundary Layer Equations 59
5.1 Introduction 59
5.2 Integral Boundary Layer Equations 59
5.2.1 Boundary Layer Momentum Integral Equation of the Flow on the Stream Surface of Revolution 59
5.2.2 Momentum and Energy Integral Equations of the Boundary Layer for Different Flow Cases 62
5.3 Generalized Method for Approximate Calculation of the Boundary Layer Momentum Thickness 64
5.4 Laminar Boundary Layer Momentum Integral Equation 66
5.5 Transitional Boundary Layer Momentum Integral Equation 68
5.5.1 Velocity Distribution in the Boundary Layer Region 68
5.5.2 Wall Shear Stress Prediction in the Transitional Region 68
5.5.3 An Approximate Momentum Integral Equation for the Transitional Region 70
5.6 Turbulent Boundary Layer Momentum Integral Equation 70
5.6.1 The Law of Velocity Distribution 71
5.6.2 Shape Parameters, \( H \) and \( H_{20} \) 72
5.6.3 Wall Shear Stress Coefficient 72
5.6.4 Boundary Layer Momentum Thickness Prediction 75
5.6.5 An Approximate Formula for Prediction of the Shape Parameter \( H \) of the Turbulent Boundary Layer 78
5.6.6 Empirical Constants for the Generalized Method for Approximate Calculation of Turbulent Boundary Layer Momentum Thickness Proposed by Different Authors 80
5.7 Calculation of a Compressible Boundary Layer 81
5.7.1 Compressibility Transformation of the Integral Equation of the Boundary Layer 81
5.7.2 Calculation Method for a Compressible Boundary Layer Without Heat Transfer 83
5.7.3 Boundary Layer Calculation Method for a Blade Cascade on the Stream Surface of Revolution 84
5.8 Summary 84

6 Application of Boundary Layer Techniques to Turbomachinery 87
6.1 Introduction 87
6.2 Flow Rate Coefficient and Loss Coefficient of Two-Dimensional Blade Cascades 87
6.2.1 Flow Rate Coefficient of a Blade Cascade 88
6.2.2 Loss Coefficient of a Blade Cascade 89
6.3 Studies on the Velocity Distributions Along Blade Surfaces and Correlation Analysis of the Aerodynamic Characteristics of Plane Blade Cascades 92
6.3.1 Influence of Blade Surface Velocity Distribution on Boundary Layer Momentum Loss Thickness 92
6.3.2 The Loss Coefficient of a Theoretical Optimum Plane Turbine Profile Cascade 93
6.3.3 Correlations of the Loss Coefficient of a Plane Turbine Profile Cascade (Using the Geometrical Convergence Gradient of Blade Passage, \( G \)) 94
6.3.4 Correlations of the Loss Coefficient of a Plane Turbine Profile Cascade (Using the Convergence Gradient of Blade Passage \( G'' \) Expressed by Flow Angles) 97
6.3.5 Correlations of the Loss Coefficient of a Plane Compressor Blade Cascade (Using Diffusion Factor \( D \)) 99
6.4 Summary 101

7 Stream Function Methods for Two- and Three-Dimensional Flow Computations in Turbomachinery 103
7.1 Introduction 103
7.2 Three-Dimensional Flow Solution Methods with Two Kinds of Stream Surfaces 104
7.2.1 Three-Dimensional Solution 104
7.2.2 Quasi-Three-Dimensional Solution 106
7.3 Two-Stream Function Method for Three-Dimensional Flow Solution 106
7.3.1 Coordinate System and Metrical Tensors 106
7.3.2 Three-Dimensional Governing Equations of Steady Inviscid Fluid Flow 109
7.3.3 Definition of Stream Functions and Coordinate-Transformation 110
7.3.4 Boundary Conditions and Calculation Examples 112
7.4 Stream Function Methods for Two-Dimensional Viscous Fluid Flow Computations 118
7.4.1 Navier–Stokes Equation Solution for Rotating Blade Cascade Flow on an S1 Stream Surface of Revolution 119
7.4.2 Boundary Conditions 122
7.4.3 Solution Procedure 123
7.4.4 Calculation Examples 123
7.5.1 Stream Function Equation and Artificial Compressibility 127
7.5.2 Stone’s Strongly Implicit Procedure (SIP) and its Improvement 128
7.5.3 Numerical Solution Procedure 129
7.5.4 Calculation Examples 130
7.6 Finite Analytic Numerical Solution Method (FASM) for Solving the Stream Function Equation of Blade Cascade Flow 131

8 Pressure Correction Method for Two-Dimensional and Three-Dimensional Flow Computations in Turbomachinery 145

8.1 Introduction 145

8.2 Governing Equations of Three-Dimensional Turbulent Flow and the Pressure Correction Solution Method 146

8.2.1 Governing Equations 146

8.2.2 Two-Equation ($k - \varepsilon$) Turbulence Model 148

8.2.3 Coordinate Transformation and Generalized Form of Governing Equations with Body-Fitted Coordinates for Calculating Orthogonal Coordinate Components of the Velocity Vector 150

8.2.4 Discretized Algebraic Equations 151

8.2.5 Boundary Conditions and Wall-Function Treatment 156

8.3 Two-Dimensional Turbulent Flow Calculation Examples 157

8.3.1 A Symmetric Airfoil 157

8.3.2 Low Speed Subsonic Turbine Blade Cascade (NACA TN-3802) 159

8.3.3 Turbine Blade Cascade (VKI-LS59) 162

8.3.4 Transonic Turbine Blade Cascade with Large Round Leading Edges (T12) 164

8.3.5 Supersonic Turbine Blade Cascade 165

8.3.6 Compressor Blade Cascade (T1) 166

8.4 Three-Dimensional Turbulent Flow Calculation Examples 169

8.4.1 Linear Turbine Blade Cascade 173

8.4.2 Annular Turbine Blade Cascade 175

8.4.3 High Turning Turbine Blade Cascade for an Annular Blade Cascade Wind Tunnel 181

8.4.4 Linear Compressor Cascade 183

8.4.5 BUAA Single Rotor Test Compressor 185

8.4.6 Centrifugal Impeller 192

8.5 Summary 198

10 Numerical Study on the Aerodynamic Design of Circumferential- and Axial-Leaned and Bowed Turbine Blades

10.1 Introduction

10.2 Circumferential Blade-Bowing Study

10.2.1 Circumferential Blade-Bowing Procedure

10.2.2 Effect on the Pressure Distributions of the Surfaces of Revolution at Different Span Heights

10.2.3 Effect on Parameter Contours of the Meridian Surfaces \((x^2 = \text{const})\)

10.2.4 Effect on Pressure Contours of the Coordinate Surfaces \((x^1 = \text{const})\)

10.2.5 The Bowing Effect for Restraining Boundary-Layer Separation from the End-Wall
10.2.6 Circumferential Bowing Effect on Pitch-Wise Mass-Averaged Parameters at Station 3

10.2.7 Suggestion of Applying a New Circumferentially Bowed Blading

10.3 Axial Blade-Bowing Study

10.3.1 Axial Blade-Bowing Procedure

10.3.2 Effect on Static Pressure Contours of the Meridian Surfaces $(\chi^2 = \text{const})$

10.3.3 Effect on Pressure Distributions of the Surfaces of Revolution at Different Span Heights

10.3.4 Effect on Static Pressure Contours of the Surfaces of $\chi^1 = \text{const}$

10.3.5 Effect on Circumferentially Averaged Parameters at the Vertical Measuring Plane (Just at the Exit from the Blade Channel, that is, Station No. 3)

10.3.6 Axial Bowing Effect on Secondary Flow

10.3.7 Axial Bowing Effect on Global Adiabatic Efficiency and Flow Rate

10.4 Circumferential Blade-Bowing Study of Turbine Nozzle Blade Row with Low Span-Diameter Ratio

10.4.1 Leaning Effect on Adiabatic Efficiency and Exit Flow Angle

10.4.2 Generation of a Radial Stacking Form Close to Optimal

10.4.3 An Attempt at a Blade Modification

10.5 Summary

11 Numerical Study on Three-Dimensional Flow Aerodynamics and Secondary Vortex Motions in Turbomachinery

11.1 Introduction

11.2 Post-Processing Algorithms

11.2.1 Relative Velocity Vector Schemes, Surface Trace and Volume Trace

11.2.2 Vortex Intensity

11.2.3 Entropy Increment

11.2.4 An Approximate Formula for Predicting the Secondary Flow Velocity Vector

11.3 Axial Turbine Secondary Vortices

11.3.1 Saddle Point and Horseshoe Vortex

11.3.2 Bowing Effect on the Location of the Saddle Point

11.3.3 Passage Vortex

11.3.4 Bowing Effect on the Development of the Passage Vortex

11.3.5 Bowing Effect on the Passage Vortex for Different Incidence Angles

11.3.6 Corner Vortex in Straight and Saber-Shaped Blade Cascades

11.3.7 Tip Clearance Vortex

11.3.8 Blade Bowing Effect in Blades with Tip Clearance

11.3.9 Mechanism of Loss Reduction by Bowed Blades
11.4 Some Features of Straight-Leaned Blade Aerodynamics of a Turbine Nozzle with Low Span-Diameter Ratio

11.4.1 Leaning Effect on Static Pressure Contours on the Blade Surfaces and on the Exit Coordinate Plane 310
11.4.2 Leaning Effect on Limiting Streamlines on Blade Surfaces 311
11.4.3 Leaning Effect on Entropy Contours at the Exit Plane from the Blade Channel 311

11.5 Numerical Study on the Three-Dimensional Flow Pattern and Vortex Motions in a Centrifugal Compressor Impeller 317

11.5.1 Complexity of the Flow in an Impeller 317
11.5.2 Limiting Streamlines on the Pressure/Hub and Suction/Hub Surfaces 317
11.5.3 Secondary Vortices in the Centrifugal Impeller 319
11.5.4 Topology of the Passage Vortex in the Centrifugal Compressor Impeller 322
11.5.5 Separation Vortex in a Vaneless Diffuser 325
11.5.6 Vaneless Diffuser Design Improvement 326

11.6 Summary 326

12 Two-Dimensional Aerodynamic Inverse Problem Solution Study in Turbomachinery 329

12.1 Introduction 329
12.2 Stream Function Method 331
12.2.1 S2 Meridional Stream Surface Flow 332
12.2.2 S1 Stream Surface Flow of Revolution 334
12.3 A Hybrid Problem Solution Method Using the Stream Function Equation with Prescribed Target Velocity for the Blade Cascades of Revolution 336
12.3.1 Circumferentially Geometric Proportional Curvilinear Coordinate System 337
12.3.2 Stream Function Equation and its Coefficients 338
12.3.3 Solution Procedure 339
12.3.4 Calculation Examples 340
12.4 Stream-Function-Coordinate Method (SFC) for the Blade Cascades on the Surface of Revolution 343
12.4.1 Stream-Function-Coordinate Equation 343
12.4.2 Artificial Compressibility Technique 345
12.4.3 Boundary Conditions 345
12.4.4 Numerical Examples 346
12.5 Stream-Function-Coordinate Method (SFC) with Target Circulation for the Blade Cascades on the Surface of Revolution 350
12.5.1 Blade Circulation and its Derivative 351
12.5.2 Blade Thickness Distribution 352
12.6 Two-Dimensional Inverse Method Using a Direct Solver with Residual Correction Technique 353
12.6.1 Residual Correction Equation 354
12.6.2 A Calculation Example 357
12.7 Summary 359
