## 1 Modeling: Understanding Metal-Nanoparticle Plasmons

1.1 Classical Picture: Solutions of Maxwell’s Equations  
1.2 Discrete Plasmon Resonances in Particles  
1.3 Overview of Numerical Methods  
1.4 A Model System: Gold Nanorods  
1.5 Size-Dependent Effects in Small Particles  
References  
46

## 2 Making: Synthesis and Fabrication of Metal Nanoparticles

2.1 Top-Down: Lithography  
2.2 Bottom-Up: Colloidal Synthesis  
2.3 Self-Assembly and Hybrid Methods  
2.4 Chemical Assembly  
References  
92
# Contents

3 **Measuring: Characterization of Plasmons in Metal Nanoparticles**  
3.1 Ensemble Optical Measurements  97  
3.2 Single-Particle Optical Measurements  102  
3.3 Electron Microscopy  125  
References  132

4 **Coupled Plasmons in Metal Nanoparticles**  
4.1 Pairs of Metal Nanoparticles  136  
4.2 Understanding Complex Nanostructures Using Coupled Plasmons  149  
References  161

5 **Nonlinear Optical Response of Metal Nanoparticles**  
5.1 Review of Optical Nonlinearities  166  
5.2 Time-Resolved Spectroscopy  170  
5.3 Harmonic Generation  187  
References  191

6 **Coupling Plasmons in Metal Nanoparticles to Emitters**  
6.1 Plasmon-Modified Emission  193  
6.2 Plasmon–Emitter Interactions Beyond Emission Enhancement  210  
References  225

7 **Some Potential Applications of Plasmonic Metal Nanoparticles**  
7.1 Refractive-Index Sensing and Molecular Detection  229  
7.2 Surface-Enhanced Raman Scattering  233  
7.3 Near-Field Microscopy, Photolithography, and Data Storage  239  
7.4 Photodetectors and Solar Cells  242  
7.5 Optical Tweezers  249  
7.6 Optical Metamaterials  254  
References  266
