Index

Page numbers in italics represent figures, those in bold represent tables.

α-actinin 62
Actinomyces 120
A. naeslundii 118, 119, 120
Activa bracket 10, 10
activator protein 1, 62
active clip 14–15
adaptive immunity 122–3
addressins 122
Adenta bracket 14
adhesins 117
age
chronological 92
dental 92
Aggregatibacter actinomycetemcomitans 119, 121
alcohol consumption 91
alignment 75, 157–8
efficiency 71–2
initial 34–7, 34–6
allergy 90–1
alloy brazing 25–7, 26
alpha error 53
alveolar bone density 93
loss 58
turnover 93
applied force 95
arch changes 74–7, 74, 75, 76
arch contraction 172
arch expansion 171–2
archform 156
archwire bends 156
archwires
engagement 6–7, 7
location 153–6, 156
placement 155
sequencing 157–8
alignment 157–8
finishing 159
rectangular nickel-titanium archwires 158–9
working archwires 159
asthma 90–1
bacteria 117–24
biofilms 117, 118
cariogenic 125–34
interactions with saliva 120–2
Baker, H.A. 1
Barrer, H. xxii
base materials
mesh 21, 22
stiffness 21, 22–4, 24
bias 47, 50
biofilms 117
biomechanics 33–44
archform 156
archwire location 155–6, 156
archwire placement 155
archwire sequencing 157–8
alignment 157–8
finishing 159
rectangular nickel-titanium archwires 158–9
working archwires 159
bucco-lingual correction 37, 39, 40
consistency of ligation force 41–3, 43
disclusion and equilibration 154–5, 155
friction 154
fully bonded appliances 153
initial alignment 34–7, 34–6
interbracket span 153–4, 154
periodontal health 156–7, 157
reasons for tooth extraction 147–9, 149
retention 173–4, 174
simulated intrusion-extrusion 37, 38
simulated rotational correction 37–41, 41, 42
tooth movement 151–3, 159–73
bracket positioning 161–2, 161–4
bracket selection 159–61, 160
individual tooth movement 152, 152
multiple tooth movement 152, 153, 169–73, 170–3
X-axis 162, 164–5, 164, 165
Y-axis 167–9, 168, 169
Z-axis 165–7, 166, 167
of treatment 147–76
bisphosphonates 91–2
blinding/masking 52–3, 53
bonding material, and bacterial growth 126–7, 126
bone remodeling 57
brackets
base materials 21–4
esthetic 13–14, 14
materials 21–31, 22
and bacterial growth 127–9, 128, 129
base 21–4, 22
base-wing joint 22, 25–8, 26
mesh 22
slot 22, 28, 29–30, 29
wings 22, 24–5, 24
collagenase 61

Candida albicans 122

C. rectis 118

Campylobacter 121

calcitonin 91

corticosteroids 91

collagen 61

dto-lingual displacement 159–61,

cancer 62

cell adhesion 62

cytokines 136

interdigitation 173
interferons 136
interleukins 64, 136
intermolar expansion 76
intervention studies 50–4
advantages 54
blinding/masking 52–3, 53
disadvantages 54
estimation of clinical effects 53
ethical issues 54
intention-to-treat 53
randomization 51–2, 52
study cohort 50–1, 51
intrusion-extrusion, simulated 37, 38, 39
Isaacson, R. xxii

Kesling, H. xxii

Lactobacillus 135
lactoferrin 121
laser soldering 28, 26
Lerner, H. xxiii
light force orthodontics xxi–xxviii
light microscopy 87, 87
lysozyme 121
Magill, J. xxii
malocclusion 93
mandible 93
matrix metalloproteinases 61
maxilla 93
mesh 21, 22, 22, 23
metal injection molding 27–8
microbiota, oral 117–24
MiniMolds 154–5
missing teeth 93
mitogen-activated protein kinase 62
Mobil-lock bracket 10, 10
mucins 121
mucosa-associated lymphoid tissue 122
Mulligan mechanics xxiii
Mulligan, T. xxii
multiple tooth movement 152, 153, 169–73, 170–3
nail-biting 92
non-extraction treatments 111
NSAIDs 91
nuclear factor kappa B 65, 89
nutrition 91
observational studies 54
occlusal trauma 93
OPAL bracket 14, 14
oral hygiene 6
orthodontically induced inflammatory
root resorption see root resorption
Orthodontic Measurement and Simulation System 33
Orthos2 bracket 33
bucco-lingual displacement 40
intrusion-extrusion 39
rotational correction 41
osteoblasts 57
osteoclasts 57
osteoprotegerin 63, 89
outcome 50
overbite reduction 172, 172
Oyster bracket 14
PAR scores 70
passive slide 14–15
paxillin 62
periodontal health 156–7, 157
periodontal impact 135–45
bracket systems used 137–44, 138–42, 139
long-term effects 137
short-term effects 135–6, 136
periodontium, hypofunctional 93
Philippe bracket 14
phosphoric acid 141
pin-a-slot appliances xxii–xxviii
pioneer organisms 119
placebo treatment 53
polymorphonuclear leukocytes 136
Porphyromonas 120
P. gingivalis 118, 119, 120, 121
Prevotella
P. loescheii 118
P. melaninogenica 119
proclination 77
proline-rich proteins 121
prostaglandins 62
pseudomesh 22
Quick bracket 15
randomization 51–2, 52
RANKL 63, 64
rectangular nickel-titanium archwires 158–9
red complex 120
Reitan, Kaare 59
resistance to sliding 5
retention 173–4, 174
alignment 173–4
intermaxillary relationships 174, 174

saliva-bacteria interactions 120–2
salivary pellicle 120
scanning electron microscopy 87–8, 87, 88
secretory immunoglobulin A antibody 122
Selenomonas 119
self-ligation 3–17, 3
active clip vs passive slide 14–15
archwire engagement and low friction 6–7, 7
core advantages 4–6
comfort 6
faster ligation 4
good oral hygiene 6
low friction 4–6, 5, 5, 6
more efficient treatment 16
secure archwire attachment 4
esthetic brackets 13–14, 14
factors hindering adoption of 8–13, 9–13
qualitative differences in tooth movement 16–17
severely irregular teeth 7–8, 8, 9
slot 22, 28, 29–30, 29
hardness 29
roughness 29, 29
SmartClip bracket 13, 13
discomfort level 81
space closure 79
treatment duration 71, 71
space closure 74, 79–80, 169–70
space opening 169
Spectrum 441 appliance xxvi
Spectrum bracket xxvii
SPEED bracket 9, 9, 15, 69, 159
biomechanics 147–8
handling efficiency 80
periodontal impact 138, 138, 140, 141
stiffness 43
torque delivery 78, 160
split-mouth bracket design 139, 139
stainless steel ligatures 1
stainless steel stops 155, 156
