Contents

Preface, vii

Part 1 Electrophysiology Concepts

1 Procedural issues for electrophysiologic studies: vascular access, cardiac chamber access, and catheters, 3

2 Fluoroscopic anatomy and electrophysiologic recording in the heart, 15

3 Programmed stimulation, 29

4 Bradycardia, 51

5 Supraventricular tachycardia, 60

6 Wide complex tachycardia, 86

7 New technology, 94

8 Power sources for ablation, 99

Part 2 Specific Arrhythmias

9 Accessory pathways, 107

10 AV node reentry, 132

11 Focal atrial tachycardia, 148

12 Atrial flutter, 161

13 Atrial fibrillation, 182

14 Ventricular tachycardia, 189

15 Implantable cardiac devices: ECGs and electrograms, 211

Index, 220
