columnar 284–5, 286, 287
conical 283, 285, 287
irregular 291
columnar 278–9, 292
branching 284–5, 286
complex juxtapositions 288, 292
conical 278, 282–3, 284, 291, 292
branching 283, 285, 287
Conophyton–Jacuphyton biostratigraphy 277–93
cratonal inunation 292
depositional setting 278
domal 278–9
growth 277–8
aggradational 288
Highborne Cay
chronology 153, 155, 160
reef building 158, 163
sampling 156–7
uranium–thorium dating 157
highstand growth 278
interstromatolitic detrital carbonate 285, 287
deposition rate 292
laminae 277–8
low synoptic relief 291–2
marine cement 285–6, 287
mat growth 278
morphology 277, 278
variability 291
reef development 292
elements 282–6
growth 291–2
margins 292
ridges 163
sand burial 162
sea-level changes 287–9, 291
Stocking Island (Bahamas) 151, 152, 160
reef building 163
stromatoporoids 265
Lexington Limestone (Cincinnati Arch) 267
strontium-isotope ratio 329
sub-Milankovitch model 232–3
subsidence
differential in Swiss Jura Mountains 207–8
Latemar/Mendola cycles 221
subsurface deposition 302
Subtropical Divergence Zone (STDZ) 32
sulphate, bacterial 168, 175–6
sulphide oxidation 175–6
Swiss Jura Mountains, Oxfordian 199–211
climate 208
controls on facies distribution 206–11
depositional sequences 202–3, 204, 205–6
differential subsidence 207–8
ecology 208–9
oncoids 204, 209
reefs 210
patch 208–9, 210
position 209
sea-level changes 206–7
sedimentation rates 210–11
stratigraphy 201, 202
study area 201–2
water temperature 208
Taconic Orogeny, Cincinnati Arch 255–71
Tampa Bay (Florida), Tertiary siliciclastic sediment transport 179–94
boreholes 181, 183–4, 186
location 182
prograding sequences 187
seismic data 181, 183–5, 186
siliciclastic repositories 180, 187
sub-basin 181, 183–5, 186
formation/filling 181, 183–5, 186
high-sediment discharge rivers 193
Taoudeni Basin (West Africa) 279–80
tempestites 299
tubular 302
Thalassinoides (trace fossil) 71
thrombolites 149–50
tidal deltas 76, 78–9
currents 86–7
hurricane impacts 76, 78–9
mud 301
sediment movements 86–7
tidal velocities 88
tidal passes, phylloid algal mound development 250–1
Tilemsina (stromatolite) 278, 281, 283, 284, 285, 286
formation on cone tops 289
interstromatolitic detrital carbonate 285, 287
reef intervals 292
sea-level change 286, 291
Tongue of the Ocean (Great Bahama Bank) 40, 42
total organic carbon, Brejo do Espinho Lagoon (Brazil) 170, 171
transition frequency matrix 342
transition probability matrix 342
Arabian Gulf 344–5, 347, 352–3
Leitha Limestone 346–7
temporal 347, 348, 349, 352–3
Triassic, depositional cycles 231
tsunami deposits 299
Tungussia (stromatolite) 281, 284, 286
turbidites 299
Turneffe Islands (Belize–Yucatan) 62, 63
sediment carbon and oxygen stable isotopes 64, 65, 66
Udotea (calcareous algae) 101
United Arab Emirates, Holocene sediments 338–57
regional setting 338–40
