<b>Preface</b>	<b>ix</b>
<b>Glossary of physical terms</b>	<b>xi</b>
<b>1 The structures of biological macromolecules and lipid assemblies</b>	<b>1</b>
1.1 General introduction	1
1.2 Protein structure	4
1.3 Carbohydrate structure	26
1.4 Nucleic acid structure	41
1.5 Macromolecular lipid assemblies	69
1.6 Structural forces in biological macromolecules	81
<b>2 Chemical and biological synthesis</b>	<b>93</b>
2.1 Introduction to synthesis in chemical biology	93
2.2 Chemical synthesis of peptides and proteins	94
2.3 Chemical synthesis of nucleic acids	102
2.4 Chemical synthesis of oligosaccharides	111
2.5 Chemical synthesis of lipids	118
2.6 Biological synthesis of biological macromolecules	119
2.7 Directed biological synthesis of proteins	129
2.8 Biological syntheses of nucleic acids, oligosaccharides and lipids	137
<b>3 Molecular biology as a toolset for chemical biology</b>	<b>139</b>
3.1 Key concepts in molecular biology	139
3.2 Tools and techniques in molecular biology	144
3.3 Cloning and identification of genes in DNA	157
3.4 Integrating cloning and expression	166
3.5 Site-directed mutagenesis	170
<b>4 Electronic and vibrational spectroscopy</b>	<b>175</b>
4.1 Electronic and vibrational spectroscopy in chemical biology	175
4.2 UV-visible spectroscopy	176
4.3 Circular dichroism spectroscopy	183
4.4 Vibrational spectroscopy	189

4.5	Fluorescence spectroscopy	193
4.6	Probing metal centres by absorption spectroscopy	222
<b>5</b>	<b>Magnetic resonance</b>	<b>225</b>
5.1	Magnetic resonance in chemical biology	225
5.2	Key principles of NMR	226
5.3	Two-dimensional NMR	242
5.4	Multi-dimensional NMR	247
5.5	Biological macromolecule structural information	252
5.6	EPR spectroscopy; key principles	266
<b>6</b>	<b>Diffraction and microscopy</b>	<b>273</b>
6.1	Diffraction and microscopy in chemical biology	273
6.2	Key principles of X-ray diffraction	274
6.3	Structural information from X-ray diffraction	283
6.4	Neutron diffraction	297
6.5	Key principles of electron microscopy	299
6.6	Key principles of scanning probe microscopy	309
<b>7</b>	<b>Molecular recognition and binding</b>	<b>321</b>
7.1	Molecular recognition and binding in chemical biology	321
7.2	Theoretical models of binding	340
7.3	Analysing molecular recognition and binding	348
7.4	Biological molecular recognition studies	365
<b>8</b>	<b>Kinetics and catalysis</b>	<b>385</b>
8.1	Catalysis in chemical biology	385
8.2	Steady state kinetic schemes	408
8.3	Pre-steady-state kinetics	441
8.4	Theories of biocatalysis	448
8.5	Electron transfer	471
<b>9</b>	<b>Mass spectrometry and proteomics</b>	<b>475</b>
9.1	Mass spectrometry in chemical biology	475
9.2	Key principles in mass spectrometry	477
9.3	Structural analysis of biological macromolecules and lipids by mass spectrometry	490
9.4	The challenge of proteomics	499
9.5	Genomics – assigning function to genes and proteins	509
<b>10</b>	<b>Molecular selection and evolution</b>	<b>513</b>
10.1	Chemical biology and the origins of life	513
10.2	Molecular breeding; natural selection acting on self-organisation	518
10.3	Directed evolution of protein function	522
10.4	Directed evolution of nucleic acids	530
10.5	Catalytic antibodies	539
	<b>References</b>	<b>543</b>
	<b>Index</b>	<b>555</b>
