automobile engine, 237
automotive applications, traditional beaded (particulate) catalysts failure, 250, 251
automotive catalysts, 7
converter, 25
rate control regimes, 247
autothermal reforming (ATR), 111–112
B
base metals, 31, 183
catalysts, 240, 250
Bayerite, 33
benzene, 187
benzene oxidation to maleic anhydride, 166
BET. see Brunauer-Emmett-Teller (BET)
beta zeolite, 36, 37
biochemical approach, 278
biodegradable detergents, 186
biodiesel, 276
non-fossil fuels, sources of, 276
production process, 276–277
production from triglycerides, 276–277
bioethanol
from edible sources, 277–278
non-fossil fuels, sources of, 277, 278
from corn, 278
biofuels from lignocellulose biomass, 278
biomass
conversion of, 190
for energy production, 277
to fuels (alternative energy source), 274–275
BMT. see bulk mass transfer (BMT)
Boehmite, 33
Boltzmann distribution, 4
Brønsted acid sites, 33
Brunauer-Emmett-Teller (BET) equation, 49
surface, 240
area, 242
bubble/slurry-phase process, 142
bulk mass transfer (BMT), 21, 218, 219
coefficient, 78
control, conversion vs. temperature profile, 21
rate, 78
expression, origin of, 79, 80
as function of temperature, 22
bulk (film) mass transfer rate, 78–80, 220
butane oxidation to maleic anhydride, 166
C
calcinations, 32, 246
carbohydrates, 274
carbon balance, 26–27
experimental methods for measuring, 27
carbon-free energy, 230
carbon monoxide (CO), 4, 7, 216
catalyst deactivation, 222–224
catalytic incineration of, 216–224
catalyzed monolith/honeycomb structures, 219–220
cleanup reactor, 288
deadivated catalysts, regeneration of, 224
emissions, 215, 235
monolith/honeycomb structure, 218–219
reactor sizing, 220–222
reduction catalyst, 251–255
removal methods, 116
methanation, 117
preferential oxidation, 117
pressure swing absorption, 116
simultaneous conversion of, 252
carbon–sulfur polymers, 155
carboxylation
acetic acid from methanol, 208–209
acetic acid production, 208–209
carrier materials, 8
Al2O3, 32–34
carbons, 37
SiO2, 34
TiO2, 34, 35
zeolites, 34–36
carsuls, 155
catalysis, chemical and physical steps, 19–23
catalyst beds, 136
carrier/support, 8
chemical and physical properties, 6–10
chemical & structural properties, 54–65
in industrial applications, 6
measurement of particle size, 51–53
mechanical strength, 53–54
morphology, 56–58, 61–62
physical properties, 49–54
poisoning, 96–99

catalyst converter, in exhaust, 242
ceramic monoliths, 242–245
metal monoliths, 245, 246
catalyst deactivation, 134, 180
catalyst design, 130
catalyst deactivation, 134, 180
catalyst forming, 40–45
catalyst manufacturers, 257
catalyst preparation, 37–40
catalyst PtRe/γ-Al2O3, 8
adding Cl to a naphtha reforming, 8
catalyst regeneration, 99, 100, 224
TGA/DTA in air of coke burn-off from a catalyst, 100
TGA/DTA profile for desulfation of Pd on Al2O3 catalyst, 99, 100
catalyst removal, safety considerations, 116
catalyst selectivity, 147
catalytic abatement, 238
catalytic components, 8, 9
catalytic converters
for cooking emissions, 225
precious metal recovery, 248
catalytic cracking, 187
catalytic crystal size, 10
catalytic enzymes converts, 277
catalytic Fe–Ce redox reaction catalyzed by Mn, 3
catalytic materials, 54
active phases, 31
carrier or support, 31–35, 37
chemical and physical morphology structures, 54
elemental analysis, 54, 55
scanning electron microscopy, 56, 57
thermal gravimetric analysis (TGA), 55, 56
x-ray diffraction (XRD), 57

structure and morphology of Al2O3 carriers, 58
zeolites, 35–37
catalytic oxidation, 217
catalytic reactions, 1
during catalytic abatement, 238
fundamental steps, 19–10, 48
generic illustration, 248
catalytic reactor, 8
catalytic sites, 5, 19
catalytic species–carrier interactions, 95
catalytic surface area, 9, 10, 19
catalyzed carrier (Al2O3), 246
catalyzed coating, 243
catalyzed monolith nomenclature, 248
catalyzed reactions, 3
catalyzed soot filter (CSF), 267
catalyzed vs. noncatalyzed reactions, 1–4
Cativa™ process, 208
CATOFIN technology, 185
C12–C18 straight-chain paraffinic hydrocarbons, 276

cell density, 244, 245
ceramic monoliths, 219
ceria (CeO2), 37
chain-driven charbroiler, 226
chemical and energy synthesis, 6
chemical equilibrium constant, 77
chemical kinetics, 21, 23
conversion vs. temperature profile, 21
relative rates as a function of temperature, 22
chemical partial bond, 5
chemical promoters, 7
chemical reactions, 1
chemisorption, 5, 8, 58–61
isotherm for determining surface area of the catalytic component, 60
Chilean saltpeter (NaNO3), 129
chiral compound, 210
Claus process, 154
catalyst deactivation, 155
description, 154
for production of sulfur, 154–155
Clean Air Act, 239
Clean Air Amendment of 1990, 264
close-coupled catalyst, 256–258, 257
TWC catalyst, 258
CO2 abatement, 230–231
clean coal-fired power plants, 228, 280
cobalt carbonyl catalyst HCo(CO)_4, 206
cobalt carbonyls, 206
cobalt-containing catalysts, 240
cobalt homogeneous catalyst, hydroformylation process, 207
CO_2 emissions, 231, 281
coke formation, 99–100. see also catalyst regeneration
coke regeneration, 196
combustion, 125, 235
of coal, 279
commercial ceramic monoliths, 243
complicated fuels, autothermal reforming for, 126
constriction, 81
continuous stirred tank reactor (CSTR), 172, 207
control automobile emissions, 236
conversion of CO vs. temperature for a noncatalyzed (homogeneous) and catalyzed reaction, 5
cooled tube reactor design, illustration of, 138
CO oxidation, Pt catalyzed, 4–6
CO_2 reduction, 230–231
corn (starch), 274
bioethanol, 278
ethanol, 278
kernel, 277
corn kernel, 277
corrosion, 291
cracking, 31
hydrocarbons, 197–200
 crude oils, 8, 190
distillation, 191–193
origin and properties, 190–191
transformation of, 191
 crystalline materials, 58
 crystallite size of catalytic species, 58
CSF. see catalyzed soot filter (CSF)
CSTR. see continuous stirred tank reactor (CSTR)
 Cu-containing catalyst, 8
Cu/Cr catalyst, 240
CuCr_2O_4, 241
Cu zeolite SCR catalyst, 268
D
 deactivation, 48. see also thermally induced deactivation
coke formation, 99–100
cooking emissions catalyst, 226
masking (fouling), 97–99
metal-carrier interactions, 95
poisoning, 96–99
sintering, 89–95
steam reforming catalysts, 110–111
thermally induced, 88–89
VOC catalysts, 222
water-gas-shift catalyst, 116
dehchlorination, 181
dehydroaromatization, 201
dehydrocyclization reactions, 201
