## Contents

**Preface** xiii  
**List of Contributors** xvii

1. Socioeconomic and molecular basis of cancer 3  
   *David E. G. Shuker*  
   1.1 Introduction 3  
   1.2 Diet and cancer 8  
   1.3 Alcohol and cancer 13  
   1.4 Tobacco and cancer 17  
   1.5 Conclusions 22  
   1.6 Self-assessment questions 23  
   1.7 Further reading and resources 24  

2. Metal ions and Cancer 27  
   *J. Anastassopoulou and A. Dovas*  
   2.1 Introduction 27  
   2.2 Metal–DNA interactions 29  
   2.3 Uranium–nucleotide interaction 31  
   2.4 Toxicity and biological roles of copper 33  
   2.5 Formation of free radicals by metal ions 35  
   2.6 Radiolysis 38  
   2.7 Biomolecular targets of free radicals 42  
   2.8 Free radicals and metal ions in cancer 45  
   2.9 Conclusions 46  
   2.10 Self-assessment questions 48  
   2.11 Further reading and resources 49  

3. Genetics and cancer 57  
   *Sotiris Missailidis*  
   3.1 Introduction 57  
   3.2 Genes and cancer 59  
   3.3 Genomics 61  
     3.3.1 Comparative genomics 62  
     3.3.2 Oncogenomics 63  
     3.3.3 Nutrigenomics 68  
   3.4 Summary 70  
   3.5 Self-assessment questions 71  
   3.6 Further reading and resources 72  

4. Infection and cancer 75  
   *Toni Aebischer and Thomas Rudel*  
   4.1 Viral infection as a cause of cancer 75  
     4.1.1 Introduction 75
4.1.2 Principles of oncogenic transformation by virus infection 77
4.1.3 Human pathogenic viruses causing cancer 80
4.2 Bacterial infection as a cause of cancer 85
4.2.1 Introduction 85
4.2.2 Bacterial infection causing malignancies: examples and evidence 86
4.2.3 Common molecular machines linked to pathogenesis:
    Type 3 and 4 secretion systems 89
4.2.4 Other bacterial effects potentially contributing to cancer 92
4.2.5 Anti-infection strategies to prevent infection related cancer 93
4.3 Summary 93
4.4 Self-assessment questions 93
4.5 Further reading and resources 96

5. Inflammation and cancer 99
   Nigel Courtenay-Luck
5.1 Introduction 99
   5.1.1 Acute inflammation 99
   5.1.2 Chronic inflammation 100
5.2 Acute inflammation 100
   5.2.1 Mediators of acute inflammation 101
5.3 Chronic inflammation 102
5.4 Drugs used in inflammation and cancer 104
   5.4.1 COX-2 inhibitors 104
   5.4.2 Antihypertensive drugs 105
5.5 Evidence for a molecular link between inflammation and cancer 106
5.6 Clinical relationship between inflammatory disease and cancer 107
   5.6.1 Inflammatory bowel disease 107
   5.6.2 Prostate cancer 108
5.7 Discussion 109
5.8 Self-assessment questions 110
5.9 Further reading and resources 111

6. Cancer diagnosis 115
   Anna Batistatou and Konstantinos Charalabopoulos
6.1 Blood tests for tumour markers 115
   6.1.1 Established and novel tumour markers in serum 116
   6.1.2 Various types of tumour markers in use 121
6.2 Urine tests for tumour markers 122
6.3 Smear tests and their association with tumour development 122
6.4 Histopathology 123
   6.4.1 Benign tumours 124
   6.4.2 Malignant tumours 125
   6.4.3 Features of cancerous cells 127
   6.4.4 Immunohistochemistry 128
6.5 Summary 130
6.6 Self-assessment questions 130
6.7 Further reading and resources 131

viii CONTENTS
7. Tumour imaging and therapy 135

Alan C Perkins

7.1 Introduction 135

7.2 X-ray imaging 137
  7.2.1 Mammography 138
  7.2.2 X-ray CT 139

7.3 Nuclear medicine 141
  7.3.1 The gamma camera 142
  7.3.2 Positron emission tomography 143
  7.3.3 Intra-operative probes 144

7.4 Ultrasound imaging 145
  7.4.1 Colour doppler imaging 147

7.5 Magnetic resonance imaging 148

7.6 Radiation therapy 150
  7.6.1 Therapeutic nuclear medicine 150
  7.6.2 Brachytherapy 151
  7.6.3 External beam radiotherapy 151

7.7 Conclusions 153

7.8 Acknowledgement 154

7.9 Self-assessment questions 154

7.10 Further reading and resources 156

8. Surgery 159

Bassam Zeina

8.1 Introduction 159
  8.1.1 What is surgery? 159
  8.1.2 What is cancer surgery? 159
  8.1.3 Who deals with cancer surgery? 159
  8.1.4 Aims of cancer surgery 160

8.2 Cancer surgery as a diagnostic procedure 160

8.3 Cancer surgery as a preventive method
against cancer 161

8.4 Cancer surgery as a treatment or part
of the treatment 162
  8.4.1 Surgery as a primary treatment 162
  8.4.2 Cancer staging 163
  8.4.3 Debulking (cytoreductive) surgery 163
  8.4.4 Palliative surgery (relieving symptoms
or side effects) 163

8.5 Classic/traditional cancer surgery 164

8.6 Other common techniques in cancer surgery 164
  8.6.1 Electrosurgery 164
  8.6.2 Cryosurgery 164
  8.6.3 Laser surgery and photo dynamic therapy (PDT) 165
  8.6.4 Mohs’ micrographic surgery 165
  8.6.5 Laparoscopic surgery 165
  8.6.6 Image-guided surgery 165

8.7 Before and after cancer surgery 166
  8.7.1 Preparation for the surgery 166
9. Anticancer therapeutics

Teni Boulkas, Nassos Alevizopoulos, Angela Ladopoulou, Maria Belimezi, Alexandros Pantos, Petros Christofis and Michael Roberts

9.1 Introduction
  9.1.1 Problems in cancer
  9.1.2 Cancer treatments
  9.1.3 Classification of chemotherapy drugs

9.2 Platinum drugs
  9.2.1 Cisplatin
  9.2.2 Lipoplatin™
  9.2.3 Carboplatin
  9.2.4 Oxaliplatin
  9.2.5 New platinum compounds

9.3 Antimicrotubule agents
  9.3.1 Taxanes
  9.3.2 Vinca alkaloids

9.4 Antimetabolites
  9.4.1 5-Fluorouracil
  9.4.2 Xeloda (capecitabine)
  9.4.3 Structure of gemcitabine

9.5 Antitumour antibiotics
  9.5.1 Actinomycin D
  9.5.2 Mitomycin C
  9.5.3 Bleomycin
  9.5.4 Anthracyclines
  9.5.5 Podophyllotoxins
  9.5.6 Camptothecins

9.6 Alkylating agents
  9.6.1 Cyclophosphamide
  9.6.2 Ifosfamide
  9.6.3 Temozolomide (Temodal)

9.7 Other antitumour agents
  9.7.1 Tamoxifen

9.8 Combination chemotherapy

9.9 Growth factor signalling
  9.9.1 Tarceva
  9.9.2 Other signal transduction inhibitors

9.10 Cell cycling and cancer

9.11 Apoptosis and cancer

9.12 Angiogenesis and cancer

9.13 Cancer immunotherapy
11.6 Physiotherapy in the actions, community expectations and quality of life in oncology 258
11.7 Self-assessment questions 260
11.8 Further reading and resources 262

12. Psychosocial oncology 265
Ian J. McCubbin and Craig A. White
12.1 Introduction 265
12.2 Cancer and psychological distress 266
12.3 Assessment process 268
  12.3.1 Integrating sources of information 270
  12.3.2 Using diaries for assessment 270
12.4 Formulation 271
12.5 Psychological interventions 272
  12.5.1 Processes targeted in psychological interventions 273
  12.5.2 Specific treatment modalities 280
12.6 Does psychological intervention influence survival? 283
12.7 Summary 283
12.8 Self-assessment questions 284
12.9 Further reading and resources 285
