List of contributors  xiii  
Foreword  xvii  
Preface  xix  
About the companion website  xxi  

1  Introduction to endodontology  
*John Whitworth, Lise-Lotte Kirkevang, and Lars Bjørndal*  

- **Endodontology**  
- The objective of endodontic treatment  2  
- Clinical problems and solutions  2  
- The diagnostic dilemma  6  
- The outcome dilemma  6  
- The tools of treatment  6  
- References  7  

## Part 1  The Vital Pulp

2  The dentin–pulp complex: structure, functions, threats, and response to external injury  
*Lars Bjørndal and Alastair J. Sloan*  

- **Introduction**  11  
- The odontoblast and the dentin–pulp complex  11  
- The dental pulp  17  
- Immune responses in the dentin–pulp complex  22  
- Responses of the healthy dentin–pulp complex to nondestructive stimuli  25  
- The dentin–pulp complex and responses to external injuries  25  
- Summary  29  
- References  29  

3  Dentinal and pulpal pain  
*Inge Fristad and Matti Närhi*  

- **Introduction**  33  
- Classification of nerve fibers  33  
- Morphology of intradental sensory innervation  33  
- Function of intradental sensory nerves  36  
- Sensitivity of dentin: hydrodynamic mechanism in pulpal A-fiber activation  38  
- Responses of intradental nerves to tissue injury and inflammation  40  
- Local control of pulpal nociceptor activation  44  
- Dentin hypersensitivity  44  
- Pain symptoms and pulpal diagnosis  45  
- References  46  

4  Clinical pulp diagnosis and decision-making  
*Kerstin Petersson and Claes Reit*  

- **Introduction**  49  
- Evaluation of diagnostic information  49
### Contents

- Diagnostic accuracy 50
- Diagnostic strategy 51
- Clinical manifestations of pulpal and periapical inflammation 51
- Collecting diagnostic information 52
- Diagnostic methodology: assessment of pulp vitality 53
- Diagnostic methodology: evaluation of reported pain 55
- Diagnostic methodology: provocation/inhibition of pain 56
- Diagnostic methodology: evaluation of tooth discolorations 58
- Diagnostic classification 58
- References 59

### 5 Caries pathology and management in deep stages of lesion formation

_Lars Bjørndal_

#### Enamel lesions without clinical cavitation 63
- Progressive stages of enamel–dentin lesions without surface cavitation and exposure of dentin to the oral environment 65
- Cavitation of the dentin lesion 67
- Concluding remarks on the natural history of dental caries 72
- Strategies for the management of deep caries 72
- Detailed treatment protocol for deep caries management 74
- References 76

### 6 Treatment of vital pulp conditions

_Lars Bjørndal, Helena Fransson, and Stéphane Simon_

#### Introduction 79
- Indications and treatment concepts for preserving vital pulp functions 80
- Protocols for treatments aiming to preserve the vitality of the exposed pulp 81
- Factors of importance in preserving vital pulp functions 87
- Capping materials and healing patterns 89
- Tissue–biomaterial interaction and pulp healing 91
- Pulp-preserving treatments – a controversial treatment? 92
- Indications and treatment concepts for treating the irreversibly inflamed vital pulp (pulpectomy) 93
- Postoperative considerations 96
- Choosing between pulp-preserving vital pulp therapies and pulpectomy 96
- Concluding remarks on the avoidance of pulpectomy by vital pulp therapies 97
- Revitalization and/or regenerative endodontic procedures 97
- References 98

### Part 2 The Infected Necrotic Pulp and Apical Periodontitis

### 7 Apical periodontitis

_Zvi Metzger, Anda Kfir, and Itzhak Abramovitz_

#### Introduction 103
- The nature of apical periodontitis 103
- Interactions with the infecting microbiota 107
- Treatment and healing of periapical lesions 114
- Persistence of periapical lesions 115
- Clinical manifestations and diagnostic terminology 117
- References 119
## Contents

### Chapter 8  Microbiology of the inflamed and necrotic pulp

_Luis E. Chávez de Paz_

<table>
<thead>
<tr>
<th>Section</th>

12 Access and canal negotiation: the first key procedural steps for successful endodontic treatment

Ove A. Peters and Ana Arias

Introduction 195
Principles of tooth development and tooth anatomy 195
Individual analysis of the tooth, preoperative radiographs, and additional CBCT scans in complex cases 196
Rubber dam isolation 196
Access cavity preparation 197
Canal negotiation 202
References 203

13 Root canal instrumentation

Lars Bergmans and Paul Lambrechts

Introduction 205
Principles of root canal instrumentation 205
Root canal system anatomy 206
Anatomical variations in teeth 211
Procedural steps 213
Endodontic instruments 217
Instrumentation techniques 221
Limitations of root canal instrumentation 223
Preventing procedural mishaps 225
References 228

14 Irrigation and disinfection

Markus Haapasalo and Ya Shen

Introduction 231
Eradication of microorganisms from the root canal system 231
Microbial reduction by instrumentation 232
Root canal irrigation 232
The apical root canal – a special challenge for irrigation 236
Activation of irrigant flow 237
Use of lasers in irrigation 238
Wide-spectrum sound energy for cleaning the root canal system 239
Intracanal medicaments 240
Concluding remarks 241
References 241

15 Root canal filling

15.1 Root canal filling materials

Gottfried Schmalz and Birger Thonemann

Introduction 248
Requirements 249
Evaluation of specific materials 253
References 272

15.2 Root canal filling techniques

Amir-Taymour Moinzadeh and Hagay Shemesh

Introduction 277
Clinical objectives and in vitro investigations 277
The root canal filling–dentin interface 277
Root canal filling techniques 281
Concluding remarks 289
References 289
Part 4  The Endodontically Treated Tooth

16  The root canal-treated tooth in prosthodontic reconstruction 295
   Kishor Gulabivala and Yuan-Ling Ng
   Introduction 295
   Fracture predilection of root-treated teeth 295
   Occlusal loading 298
   Root canal-treated teeth as abutments 299
   Distribution of remaining tooth structure and restorability 299
   Principles of restoration of root-treated teeth 300
   Timing of restoration after endodontic treatment 301
   Approach to restoration of anterior teeth 302
   Characteristics of posts 303
   Preparation of the post space 307
   Approach to restoration of posterior teeth 308
   Core materials 310
   Modes of restoration failure in root canal-treated teeth 310
   Conclusions 311
   References 312

17  Clinical epidemiology: measuring endodontic disease and treatment outcome 315
   Lise-Lotte Kirkevang
   Introduction 315
   Defining a “successful” outcome 315
   Study designs commonly used in endodontic research 317
   Treatment outcome and risk factors 319
   Concluding remarks 323
   References 323

18  Endodontic retreatment – the decision-making process 327
   Frank Setzer and Bekir Karabucak
   Introduction 327
   Why might the initial treatment be unsuccessful? 327
   When may further intervention be considered? 329
   Decision-making – the dentist’s perspective 330
   Decision-making – the patient’s perspective 338
   References 339

19  Nonsurgical retreatment 343
   Thomas Kvist and Luc van der Sluis
   Introduction 343
   Indications 343
   Instrumentation of the root canal 350
   Prognosis 357
   Summary 357
   References 358

20  Surgical endodontics 361
   Lise-Lotte Kirkevang, Vibe Rud, and Thomas Kvist
   Introduction 361
   General outline of the procedure 361
   Local anesthesia 363
   Flap design, incision, and raising the flap – general considerations 363
Contents

Access to the root tip 368
Root-end resection 369
Curettage of the soft-tissue lesion 369
Management of bleeding 370
Root-end preparation 371
Root-end filling 372
Repositioning and suturing of the flap 373
Postoperative measures 374
Follow-up after surgery 375
References 376

Part 5  Additional Considerations

21 Local anesthetic considerations 381
Nigel Foot and John Whitworth

Introduction 381
Fundamentals of local anesthetic action 381
Common local anesthetic agents in endodontics 382
Standard methods of local anesthesia for endodontics 383
Failure to secure anesthesia 385
Why may teeth be difficult to anesthetize? 386
Measures to preempt or overcome challenging local anesthesia 387
Supplementary injections 388
Sedation 390
Complications of local anesthesia 391
References 392

22 Complex orofacial pain conditions 393
Lene Baad-Hansen and Peter Svensson

Introduction 393
Overview of pain mechanisms 393
Diagnostic process 395
Complex orofacial pain conditions 397
Painful posttraumatic trigeminal neuropathy 397
Persistent idiopathic facial pain 398
Atypical odontalgia/persistent dentoalveolar pain 399
Trigeminal neuralgia 399
Trigeminal autonomic cephalalgias 401
Migraine/neurovascular orofacial pain 401
Temporomandibular disorder pain – referred pain 401
Summary 402
References 402

23 Endodontic complications after trauma 405
John Whitworth

Introduction 405
Common dental injuries 405
Dental trauma and its consequences 405
Consequences of pulp breakdown and infection after trauma 411
General considerations in the management of dental trauma 416
Diagnostic quandaries: to remove or review the pulp after trauma? 422
References 424
24 Medicolegal considerations
Lars Bjørndal, Shio Pabary, and John Whitworth

Introduction
Ethical considerations – the concepts of beneficence and nonmaleficence
Defining best practice
Endodontic procedures as complex interventions with scope for imperfection, oversight and error
Examples of errors and accidents
Do errors always lead to legal action?
Professional indemnity/malpractice insurance
Managing risks
Conclusion
References

25 Emergencies in need of urgent referral
Tara Renton

Introduction
Neurological injuries resulting from endodontic procedures and materials
Neurological injuries resulting from periapical inflammation
Chemical tissue trauma
Severe odontogenic infections that may compromise systemic health
Suspicion of locally aggressive or neoplastic lesions
Severe or persistent pain
Inhalation or aspiration of dental instruments or materials
Allergic responses that may compromise systemic health
Reporting adverse events
Summary
