## 1 Olive tree history and evolution

*Giorgos Kostelenos and Apostolos Kiritsakis*

1.1 Introduction  
1

1.2 The olive culture in the Mediterranean region  
1

1.3 Evolution of the olive tree from a botanical point of view  
3

1.4 A different approach  
6

1.5 Conclusion  
10

References  
11

## 2 Botanical characteristics of olive trees: cultivation and growth conditions – defense  
mechanisms to various stressors and effects on olive growth and functional compounds

*Eleni Tsantili, Evangelos Evangelou, and Apostolos Kiritsakis*

2.1 Introduction  
13

2.2 Botanical characteristics  
15

2.3 Cultivation and growth conditions  
18

2.4 Defense mechanisms against various stresses  
22

2.5 Factors affecting olive growth and functional compounds  
24

2.6 Conclusion  
27

References  
27

## 3 Conventional and organic cultivation and their effect on the functional composition  
of olive oil

*Nikolaos Volakakis, Emmanouil Kabourakis, and Carlo Leifert*

3.1 Introduction  
35

3.2 Productivity  
36

3.3 Environmental impact  
36

3.4 Pesticide residues  
37

3.5 Oil composition and quality  
37

3.6 Conclusion  
40

References  
40

## 4 The influence of growing region and cultivar on olives and olive oil characteristics and on  
their functional constituents

*Joan Tous*

4.1 Introduction  
45

4.2 Overview of olive orchards in some world crop areas  
45

4.3 Global olive oil cultivars  
53

4.4 Olive oil composition affected by genetic and environmental factors  
69

4.5 Conclusion  
76
Contents

Acknowledgments 76
References 76

5 Olive fruit and olive oil composition and their functional compounds 81
Fatima Paiva-Martins and Apostolos Kiritsakis

5.1 Introduction 81
5.2 The olive fruit 81
5.3 Description of olive fruit and olive oil constituents 82
5.4 Olive oil 83
5.5 Pigments 88
5.6 Phenols 89
5.7 Hydrocarbons 97
5.8 Triterpenoids 98
5.9 Tocopherols 99
5.10 Aliphatic alcohols and waxes 100
5.11 Sterols 100
5.12 Flavor compounds 103
5.13 Conclusion 104
Acknowledgments 105
References 105

6 Mechanical harvesting of olives 117
Sergio Castro-Garcia and Louise Ferguson

6.1 Introduction 117
6.2 Fruit removal from the tree 117
6.3 Collection, cleaning, and transport of fallen fruits 120
6.4 Continuous harvesters 123
6.5 Effects on oil and fruit quality 124
6.6 Conclusion 124
References 124

7 Olive fruit harvest and processing and their effects on oil functional compounds 127
Apostolos Kiritsakis and Nick Sakellaropoulos

7.1 Introduction 127
7.2 Harvest time 127
7.3 Harvest techniques 129
7.4 Olive storage and transportation to the olive oil mill 130
7.5 Processing steps 131
7.6 Pressure process 136
7.7 Centrifugation process 137
7.8 Selective filtration (Sinolea) process 138
7.9 Processing systems 139
7.10 Olive fruit processing by-products and their significance 140
7.11 The effect of enzymes in olive fruit processing and oil composition 141
7.12 Effect of processing systems on olive oil quality and functional properties 141
7.13 Conclusion 142
References 142

8 Application of HACCP and traceability in olive oil mills and packaging units and their effect on quality and functionality 147
Athanasia M. Goula, Konstantinos Kiritsakis, and Apostolos Kiritsakis

8.1 Introduction 147
8.2 The basic HACCP benefits and rules 147
8.3 Description and analysis of the HACCP program in the olive oil mill
8.4 Application of the HACCP program in the packaging unit
8.5 The context of traceability
8.6 Traceability of olive oil
8.7 Legislation for olive oil traceability
8.8 Compositional markers of traceability
8.9 DNA-based markers of traceability
8.10 Sensory profile markers of traceability
8.11 Conclusion
References

9 Integrated olive mill waste (OMW) processing toward complete by-product recovery of functional components
Athanasia M. Goula and Dimitrios Gerasopoulos
9.1 Introduction
9.2 Characterization of olive mill waste
9.3 Current technologies for olive mill waste treatment
9.4 Recovery of functional components from olive mill waste
9.5 Integral recovery and revalorization of olive mill waste
9.6 Conclusion
References

10 Olive oil quality and its relation to the functional bioactives and their properties
Apostolos Kiritsakis and Fereidoon Shahidi
10.1 Introduction
10.2 Hydrolysis (lipolysis)
10.3 Oxidation
10.4 Prevention of olive oil autoxidation
10.5 Photooxidation
10.6 Olive oil quality evaluation with methods other than the official
10.7 Behavior of olive oil during frying process
10.8 Off flavors of olive oil
10.9 Factors affecting the quality of olive oil and its functional activity
10.10 Effect of storage on quality and functional constituents of olive oil
10.11 Conclusion
References

11 Optical nondestructive UV-Vis-NIR-MIR spectroscopic tools and chemometrics in the monitoring of olive oil functional compounds
Vasiliki Lagouri, Vasiliki Manti, and Thanasis Gimisis
11.1 Introduction: functional compounds in olive oil
11.2 An introduction to UV-Vis-NIR-MIR spectroscopy in olive oil analysis
11.3 Spectroscopic regions with interest for olive oil analysis
11.4 The basics of chemometrics
11.5 Spectral preprocessing methods
11.6 UV-Vis-NIR-MIR spectroscopy and chemometrics in monitoring olive oil functional compounds
11.7 UV-Vis-NIR-MIR spectroscopy and chemometrics in monitoring olive oil oxidation
11.8 FTIR spectroscopy and chemometrics in monitoring olive oil functional compounds and antioxidant activity
11.9 The use of UV-Vis-NIR-MIR spectroscopy in olive oil industry and trade
11.10 Conclusion

12 Oxidative stability and the role of minor and functional components of olive oil 249
Giuseppe Fregapane and María Desamparados Salvador

12.1 Introduction 249
12.2 Olive oil oxidative stability 249
12.3 Accelerated oxidative assays and shelf-life prediction 254
12.4 Stability of olive oil components: fatty acids and minor components 256
12.5 Antioxidant capacity of olive oil functional components 260
12.6 Conclusion 261

References 262

13 Chemical and sensory changes in olive oil during deep frying 267
George Siragakis and Dafni Karamanavi

13.1 Introduction 267
13.2 Alterations of chemical characteristics in frying olive oil 268
13.3 Oxidation of olive oil during frying 270
13.4 Methods for determination of polar compounds and evaluation of the quality of frying olive oil 270
13.5 Evaluation of the quality of frying olive oil 272
13.6 Prediction of oxidative stability under heating conditions 272
13.7 Impact of deep frying on olive oil compared to other oils 273
13.8 Conclusion 274

References 274

14 Olive oil packaging: recent developments 279
Michael G. Kontominas

14.1 Introduction 279
14.2 Migration aspects during packaging 279
14.3 Flavor scalping 280
14.4 Effect of packaging materials on olive oil quality 280
14.5 Conclusions 291

References 292

15 Table olives: processing, nutritional, and health implications 295
Stanley George Kailis and Apostolos Kiritsakis

15.1 Introduction 295
15.2 Olive maturation stages for table olive processing 295
15.3 Olive cultivars suitable for table olive processing 298
15.4 Factors affecting raw olive fruit for table olive processing 299
15.5 Table olive processing 301
15.6 Nutritional, health, and safety aspects of table olives 311
15.7 Quality and safety aspects relating to table olives 315
15.8 Antibiotic aspects of olive polyphenols 320
15.9 Probiotic capability of table olive products 320
15.10 Conclusion 321

References 321

16 Greek-style table olives and their functional value 325
Athena Grounta, Chrysoula C. Tassou, and Efstathios Z. Panagou

16.1 Introduction 325
16.2 Table olive processing in Greece 326
16.3 Functional value of Greek table olives 330
16.4 Conclusion 338

References 338
17 Food Hazards and Quality Control in Table Olive Processing with a Special Reference to Functional Compounds

Mohamed Rahmani

17.1 Introduction 343
17.2 Table Olive Processing Techniques 345
17.3 New Trends in Table Olive Processing and Quality Control, with a Special Reference to Functional Products 347
17.4 Food Safety Requirements for Table Olives 348
17.5 Conclusion 350
References 351

18 Improving the Quality of Processed Olives: Acrylamide in Californian Table Olives

Charoenprasert Suthawann and Alyson E. Mitchell

18.1 Introduction 353
18.2 Acrylamide Formation in Food and Potential Adverse Health Effects 354
18.3 Regulation of Acrylamide in Food 359
18.4 Acrylamide Levels in Olive Products 359
18.5 Effects of Table Olive Processing Methods on Acrylamide Formation 360
18.6 Methods to Mitigate Acrylamide Levels in Processed Table Olives 362
18.7 Conclusion 363
References 364

19 Antioxidants of Olive Oil, Olive Leaves, and Their Bioactivity

Apostolos Kiritsakis, Fereidoon Shahidi, and Charalampos Anousakis

19.1 Introduction 367
19.2 Synthetic Antioxidants 368
19.3 Natural Antioxidants 368
19.4 Phenols in Table Olives 370
19.5 Phenols and Other Constituents of Olive Leaves and Other Olive Tree Products 370
19.6 Extraction and Activities of Phenolics 372
19.7 Antioxidant and Other Properties of Olive Phenolics 376
19.8 Conclusion 378
References 378

20 Composition and Analysis of Functional Components of Olive Leaves

Celia Rodríguez-Pérez, Rosa Quirantes-Piné, Jesús Lozano-Sánchez, Javier Menéndez, and Antonio Segura-Carretero

20.1 Introduction 383
20.2 Qualitative and Quantitative Analysis of Olive Leaves 383
20.3 Future Prospects 395
Acknowledgments 397
References 397

21 Production of Phenol-Enriched Olive Oil

Kostas Kiritsakis and Dimitrios Gerasopoulos

21.1 Introduction 401
21.2 Olive Oil Phenolic Compounds and Their Functional Properties 401
21.3 Effect of the Extraction Process on Olive Oil Functional Compounds 402
21.4 Enhancement of Olive Oil’s Antioxidant Content 405
21.5 Conclusion 410
References 410
# Contents

## 22 Olives and olive oil: a Mediterranean source of polyphenols

*Anna Tresserra-Rimbau and Rosa M. Lamuela-Raventós*

- 22.1 Introduction
- 22.2 Phenolic profile of olives and olive oils
- 22.3 Analytical approaches to characterize the phenolic profile of olives and olive oils
- 22.4 Stability of polyphenols: cooking effects
- 22.5 Health effects of olive and olive oil polyphenols
- 22.6 Conclusion
- Acknowledgments
- References

## 23 Bioactive components from olive oil as putative epigenetic modulators

*Tea Bilusic*

- 23.1 Introduction
- 23.2 Epigenetics as a new scientific challenge
- 23.3 Types of epigenetic modifications
- 23.4 Environmental factors and epigenetics (the role of the diet)
- 23.5 Epigenetics and human health
- 23.6 Epigenetics and aging
- 23.7 Olive oil components as dietary epigenetic modulators
- 23.8 Conclusion
- References

## 24 Phenolic compounds of olives and olive oil and their bioavailability

*Turkan Mutlu Keceli, Senem Kamiloglu, and Esra Capanoglu*

- 24.1 Introduction
- 24.2 Phenolic compounds of olives and olive oil
- 24.3 Bioavailability of olive and olive oil phenolics
- 24.4 Conclusion
- References

## 25 Antiatherogenic properties of olive oil glycolipids

*Haralabos C. Karantonis*

- 25.1 Introduction
- 25.2 The role of inflammation in the development of chronic diseases
- 25.3 The role of diet in inflammation
- 25.4 PAF and its metabolism as a searching tool for functional components with antiatherogenic activity
- 25.5 Functional components of olive oil with antiatherogenic properties
- 25.6 Conclusion
- References

## 26 Nutritional and health aspects of olive oil and diseases

*Elizabeth Lenart, Apostolos Kiritsakis, and Walter Willett*

- 26.1 Introduction
- 26.2 Dietary lipids and cardiovascular disease
- 26.3 Fat intake and cancer
- 26.4 Obesity and dietary fat
- 26.5 Conclusion
- References
27 Lipidomics and health: an added value to olive oil  
Carla Ferreri and Chryssostomos Chatgilialoglu  
27.1 Introduction 505  
27.2 Lipidomics: an added value to olive oil 505  
27.3 Membrane lipidomics and nutrilipidomics: natural oils for a healthy balance 506  
27.4 Membrane as relevant site for lipidomic analysis 512  
27.5 Conclusion and perspectives 517  
Acknowledgments 517  
References 517  

28 Analysis of olive oil quality  
Fereidoon Shahidi, Priyatharini Ambigaipalan, and Apostolos Kiritsakis  
28.1 Introduction 521  
28.2 Fatty acid composition and analysis 522  
28.3 Measurement of oxidation 523  
28.4 Determination of chlorophylls 529  
28.5 Determination of phenols 530  
28.6 Cold test 530  
28.7 Determination of sterol content 530  
28.8 Differential scanning calorimetry (DSC) of olive oil 531  
28.9 Authentication and authenticity of olive oil 531  
References 531  

29 Detection of extra virgin olive oil adulteration  
Hazem Jabeur, Akram Zribi, and Mohamed Bouaziz  
29.1 Introduction 537  
29.2 Parameters suitable for authenticity assessment of EVOO 538  
29.3 Direct authenticity assessment of EVOO 546  
29.4 Conclusion 549  
Acknowledgments 550  
References 550  

30 Authentication of olive oil based on minor components  
Styliani Christophoridou  
30.1 Introduction 555  
30.2 Sterols 555  
30.3 Vitamin E – tocopherols 556  
30.4 Phenols 558  
30.5 Volatiles 559  
30.6 Olive oil pigments 560  
30.7 Conclusion 562  
References 562  

31 New analytical trends for the measurement of phenolic substances of olive oil and olives with significant biological and functional importance related to health claims  
Eleni Melliou, Panagiotis Diamantakos, and Prokopios Magiatis  
31.1 Introduction 569  
31.2 Phenolic compounds of olive oil with special importance 569  
31.3 Analysis of table olives 581  
31.4 Conclusion 582  
References 582
Contents

32  DNA fingerprinting as a novel tool for olive and olive oil authentication, traceability, and detection of functional compounds 587
Aliki Xanthopoulou, Ioannis Ganopoulos, Irene Bosmali, Athanasios Tsafarlis, and Panagiotis Madesis
  32.1 Introduction 587
  32.2 DNA-based fingerprinting 588
  32.3 Omics approaches in olive and detection of functional compounds 595
References 596

33  Sensory properties and evaluation of virgin olive oils 603
Emmanuel Salivaras
  33.1 Introduction 603
  33.2 Description and review of methodology 603
  33.3 Chemistry, functionality, and technology behind senses 612
  33.4 Positive sensory attributes of virgin olive oil and its consumption 623
References 624

34  International standards and legislative issues concerning olive oil and table olives and the nutritional, functional, and health claims related 629
Stylianos Koulouris
  34.1 Introduction 629
  34.2 The international perspective 629
  34.3 Legislative approach by various countries 632
  34.4 The European Union perspective 636
  34.5 Nutrition and health claims related to olive oils 638
  34.6 Conclusion 644
References 644

35  The functional olive oil market: marketing prospects and opportunities 647
Konstantinos Mattas and Efthimia Tsakiridou
  35.1 Introduction 647
  35.2 The olive oil market 647
  35.3 The influence of certifications of origin and production methods in olive oil 652
  35.4 Case study: survey on consumption patterns, labeling, certification, and willingness to pay for olive oil 653
  35.5 Promotional strategies 654
  35.6 Conclusion 656
