About the Authors xiii
Foreword xv
Preface xvii

1 Platelet Rich Fibrin: A Second-Generation Platelet Concentrate 1
Joseph Choukroun and Richard J. Miron
1.1 Introduction 1
1.2 Brief history of platelet concentrates 4
1.3 The development of PRF from PRP 5
1.4 Effect of PRF on periosteum behavior 8
1.5 The first case treated with PRF 8
1.6 Conclusion 11
References 11

2 Biological Components of Platelet Rich Fibrin: Growth Factor Release and Cellular Activity 15
Masako Fujioka-Kobayashi and Richard J. Miron
2.1 Introduction 16
2.2 Cell components of PRF 16
2.3 Advantages of a three-dimensional fibrin network 18
2.4 Growth factors in blood 19
2.5 PRP versus PRF for growth factor release 20
2.6 L-PRF versus A-PRF vs A-PRF+-new findings with the low-speed centrifugation concept and low-time induces even higher growth factor release 22
2.7 i-PRF versus PRP—growth factor release 24
2.8 Cell behavior in response to L-PRF, A-PRF, and A-PRF+ 25
2.9 Cell behavior in response to PRP, i-PRF 26
2.10 Future prospective 26
References 29

3 Introducing the Low-Speed Centrifugation Concept 33
Joseph Choukroun and Shahram Ghanaati
3.1 Introduction 33
3.2 Development of advanced solid PRF matrices following the low speed centrifugation concept (LSCC) 34
3.3 Development of an injectable PRF (i-PRF) following the low speed centrifugation concept (LSCC) 38
## Contents

3.4 Platelets and leukocytes are key elements in the regeneration process 39
3.5 Clinical insights 41
3.6 Conclusion 42
References 42

4 Uses of Platelet Rich Fibrin in Regenerative Dentistry: An Overview 47
*Richard J. Miron, Giovanni Zucchelli, and Joseph Choukroun*

4.1 Introduction 47
4.2 Extraction socket management with PRF 48
4.3 Sinus elevations procedures with PRF 48
4.4 Use of PRF for soft-tissue root coverage 49
4.5 Use of PRF for periodontal regeneration 50
4.6 Use of PRF for the regeneration of soft tissues around implants 50
4.7 Use of PRF in guided bone regeneration 51
4.8 Use of PRF in various other aspects of dentistry and medicine 54
4.9 Conclusion 54
References 54

5 Use of Platelet Rich Fibrin for the Management of Extraction Sockets: Biological Basis and Clinical Relevance 59
*Richard J. Miron and Jonathan Du Toit*

5.1 Introduction 59
5.2 Natural dimensional changes occurring post-extraction 60
5.3 Conventional socket grafting and ridge preservation techniques 63
5.4 Immediate implant placement into fresh extraction sockets 66
5.5 Overview of utilizing PRF in extraction sockets 68
5.5.1 Socket grafting and ridge preservation with PRF 68
5.5.2 Preventing postoperative pain and infection 71
5.6 Discussion and future research 74
References 77

6 Maxillary Sinus Floor Elevation in the Atrophic Posterior Maxillae: Anatomy, Principles, Techniques, Outcomes, and Complications 81
*Alberto Monje, Hon-Lay Wang, and Richard J. Miron*

6.1 Introduction 81
6.2 Anatomical considerations 82
6.2.1 Embryologic development 82
6.2.2 Maxillary sinus dimension 83
6.2.3 Vascularization 83
6.2.4 Lining membrane 84
6.2.5 Sinus septa 86
6.3 Biological principles 86
6.4 Surgical techniques 87
6.5 Clinical outcomes 88
6.6 Surgical and post-surgical complications 89
6.6.1 Schneiderian membrane perforation 89
6.6.2 Acute or chronic infections 91
6.6.3 Hemorrhage 92
6.6.4 Implant migration 92
## Contents

6.7 Conclusion  93  
References  93

7  Maxillary Sinus Floor Elevation Procedures with Platelet Rich Fibrin: Indications and Clinical Recommendations  99  
Richard J. Miron, Michael A. Pikos, and Hom-Lay Wang  
7.1 Introduction  99  
7.2 PRF as a sole grafting material during sinus lifting procedures  100  
7.3 PRF for the repair of Schneiderian membranes  103  
7.4 PRF for the closure of the lateral maxillary access window  104  
7.5 Discussion and future outlook  105  
References  111

8  Use of Platelet Rich Fibrin for the Treatment of Muco-Gingival Recessions: Novel Improvements in Plastic Aesthetic Surgery Utilizing The Fibrin Assisted Soft Tissue Promotion (FASTP) Technique  115  
Alexandre-Amir Aalam and Alina Krivitsky Aalam  
8.1 Introduction  115  
8.2 Plastic periodontal procedures with PRF  117  
8.3 Fibro promotion: the basic mechanism of Fibrin-Assisted Soft Tissue Promotion (FASTP) technique  117  
8.3.1 Biotensegrity  118  
8.3.2 Volume  120  
8.4 FASTP: the surgical technique  120  
8.4.1 Incision  120  
8.4.2 Root preparation and decontamination  120  
8.4.3 Volume packing  121  
8.4.4 Suturing  121  
8.5 Conclusion  123  
References  123

9  Use of Platelet Rich Fibrin for Periodontal Regeneration/Repair of Intrabony and Furcation Defects  127  
Richard J. Miron, Brian L. Mealey, and Hom-Lay Wang  
9.1 Introduction  127  
9.2 Role of barrier membranes in periodontal regeneration  129  
9.3 Role of bone-grafting materials in periodontal regeneration  129  
9.4 Biologic agents/growth factors for periodontal regeneration  130  
9.5 Platelet rich fibrin (PRF) as a potential autologous biological agent for periodontal regeneration  131  
9.6 Intrabony defect regeneration with PRF: results from controlled clinical trials  131  
9.7 Furcation defect regeneration with PRF  134  
9.8 Discussion and future research  135  
References  137

10 Platelet Rich Fibrin as an Adjunct to Implant Dentistry  145  
Howard Gluckman  
10.1 Introduction  146  
10.2 PRF treatment of peri-implant defects  146
Contents

10.3 PRF and soft-tissue healing at implants 147
10.4 Osseointegration 149
10.5 Techniques to improve primary stability in poor bone quality 151
10.6 The use of PRF at osteotomy preparation 152
10.7 The future of PRF and implants 154
References 154

11 Guided Bone Regeneration with Platelet Rich Fibrin 159
Richard J. Miron, Michael A. Pikos, Yufeng Zhang, and Tobias Fretwurst
11.1 Introduction 159
11.2 Overview of GBR 160
11.3 Available options of GBR 161
11.4 Non-resorbable PTFE membranes 161
11.5 Titanium mesh 166
11.6 Collagen-based resorbable membranes 166
11.7 Synthetic resorbable membranes 167
11.8 Plasma-rich proteins as growth factors for membranes 167
11.9 Choice of bone-grafting materials during GBR procedures 169
11.10 Alternative strategies to induce new bone formation during GBR procedures 170
11.11 Recent surgical approaches using PRF in combination with GBR 170
11.12 PRF as a barrier membrane in GBR procedures 171
11.13 PRF in combination with bone-grafting materials 172
11.14 Studies investigating PRF for GBR 173
11.15 Discussion and future research 177
References 179

12 Modern Approach to Full Arch Immediate Loading: The Simonpieri Technique with PRF and i-PRF 185
Alain Simonpieri
12.1 Introduction 186
12.2 Immediate loading in implant dentistry—what is success? 187
12.3 Biological requirements 188
12.4 Anatomical and surgical requirements 189
12.4.1 Implant placement 189
12.4.2 Systematic apposition graft 194
12.4.3 Flap management and suture technique 195
12.5 Prosthetic requirements 195
12.6 Final results 200
12.7 Documented long-term stability 201
12.8 Long-term statistical results: full arch immediate implant placement and loading 202
12.8.1 The “Fast Guide” System for immediate implant placement 204
12.8.2 An injectable-PRF (i-PRF) for adequate graft stability and compaction 205
12.8.3 The collagen Twin Matrix 205
12.8.4 Can we get more soft tissue? 205
12.8.5 Potential wound healing: example of aesthetic failure without management of tension and regeneration with a Twin Matrix and PRF 205
12.9 Conclusion 207
References 207
13 **Use of Platelet Rich Fibrin in Facial Aesthetics and Rejuvenation** 215

*Cleopatra Nacopoulos*

13.1 Introduction 215
13.2 Features of the skin 217
13.3 Aging and the epidermal barrier function mechanisms in skin aesthetics 219
13.4 Pre-evaluation and patient selection 219
13.5 Conventional therapies in facial aesthetics 220
13.6 Lasers and epidermal barrier function 222
13.7 Overview of utilizing platelet derivatives in facial aesthetics 222
13.8 Clinical procedures utilizing PRF in facial aesthetics 222
13.9 i-PRF injections with a derma rollers 227
13.10 i-PRF injections with a derma pen 228
13.11 i-PRF and PRF for mesotherapy by syringe injections 228
13.12 Platelet concentrate during the vampire technique 229
13.13 Augmentation techniques with PRF matrix and i-PRF—combination Therapies 229
13.14 Nasolabial fold rejuvenation with PRF and i-PRF 229
13.15 Use of PRF and i-PRF for lip augmentation 230
13.16 PDO threads using PRF and i-PRF 230
13.17 Conclusion 231

References 234

14 **Use of Platelet Rich Fibrin in Other Areas of Medicine** 237

*Richard J. Miron and Joseph Choukroun*

14.1 Introduction 237
14.2 Effects of PRF on cell activity in vitro 238
14.3 Evidence that PRF improves soft-tissue wound healing/regeneration in vivo 238
14.4 Clinical studies evaluating the use of PRF in medicine 239
14.5 PRF for regeneration of chronic leg ulcers 240
14.6 PRF for cartilage (knee) regeneration 241
14.7 PRF for the regeneration of ligaments and tendons 242
14.8 PRF in orthopedic medicine 242
14.9 PRF for skin regeneration 243
14.10 Discussion and future perspectives 243

References 245

15 **Future Research with Platelet Rich Fibrin** 251

*Richard J. Miron and Joseph Choukroun*

15.1 PRF and centrifugation speeds 251
15.2 Effect of hematocrit count on PRF scaffolds 252
15.3 The influence of PRF for the treatment of osteonecrosis of the jaw 252
15.4 Injectable platelet rich fibrin as a potential therapy for temporomandibular joint disorders 253
15.5 Potential use of platelet rich fibrin for pulp regeneration 253
15.6 Platelet rich fibrin and periodontal regeneration 256
15.7 Potential use of stem cells derived from blood 256
15.8 PRF: regeneration by growth factors, leukocytes, or fibrin? 256
15.9 PRF and its degradation properties 257
15.10 PRF and osteoinduction 258
