Preface xv

1 Methods for Longitudinal Surveys 1

Peter Lynn

1.1 Introduction 1
1.2 Types of Longitudinal Surveys 2
1.3 Strengths of Longitudinal Surveys 4
  1.3.1 Analysis Advantages 4
  1.3.2 Data Collection Advantages 6
1.4 Weaknesses of Longitudinal Surveys 8
  1.4.1 Analysis Disadvantages 8
  1.4.2 Data Collection Disadvantages 9
1.5 Design Features Specific to Longitudinal Surveys 11
  1.5.1 Population, Sampling and Weighting 11
  1.5.2 Other Design Issues 13
1.6 Quality in Longitudinal Surveys 15
  1.6.1 Coverage Error 15
  1.6.2 Sampling Error 16
  1.6.3 Nonresponse Error 16
  1.6.4 Measurement Error 16
1.7 Conclusions 17

References 18

2 Sample Design for Longitudinal Surveys 21

Paul Smith, Peter Lynn and Dave Elliot

2.1 Introduction 21
2.2 Types of Longitudinal Sample Design 21
2.3 Fundamental Aspects of Sample Design 23
  2.3.1 Defining the Longitudinal Population 23
CONTENTS

6.6 Open Issues 109
Acknowledgements 109
References 110

7 Attitudes Over Time: The Psychology of Panel Conditioning 113
Patrick Sturgis, Nick Allum and Ian Brunton-Smith

7.1 Introduction 113
7.2 Panel Conditioning 114
7.3 The Cognitive Stimulus Hypothesis 116
7.4 Data and Measures 117
7.5 Analysis 118
7.6 Discussion 123
References 124

8 Some Consequences of Survey Mode Changes in Longitudinal Surveys 127
Don A. Dillman

8.1 Introduction 127
8.2 Why Change Survey Modes in Longitudinal Surveys? 128
8.3 Why Changing Survey Mode Presents a Problem 130
8.3.1 Changes in Question Structure 130
8.3.2 Effects of Visual vs. Aural Communication Channels 132
8.3.3 Interviewer Presence 135
8.3.4 How Answers to Scalar Questions are Affected by Visual vs. Aural Communication 136
8.4 Conclusions 137
References 137

9 Using Auxiliary Data for Adjustment in Longitudinal Research 141
Dirk Sikkel, Joop Hox and Edith de Leeuw

9.1 Introduction 141
9.2 Missing Data 142
9.3 Calibration 144
9.4 Calibrating Multiple Waves 147
9.5 Differences Between Waves 149
9.6 Single Imputation 150
9.7 Multiple Imputation 151
9.8 Conclusion and Discussion 153
References 155

10 Identifying Factors Affecting Longitudinal Survey Response 157
Nicole Watson and Mark Wooden

10.1 Introduction 157
10.2 Factors Affecting Response and Attrition 159
10.2.1 Locating the Sample Member 159
10.2.2 Contacting the Sample Member 160
10.2.3 Obtaining the Cooperation of the Sample Member 162
10.2.4 The Role of Respondent Characteristics 164
10.3 Predicting Response in the HILDA Survey 167
10.3.1 The HILDA Survey Data 168
10.3.2 Estimation Approach 169
10.3.3 Explanatory Variables 169
10.3.4 Results 171
10.4 Conclusion 178
References 179

11 Keeping in Contact with Mobile Sample Members 183
Mick P. Couper and Mary Beth Ofstedal

11.1 Introduction 183
11.2 The Location Problem in Panel Surveys 184
11.2.1 The Likelihood of Moving 185
11.2.2 The Likelihood of Being Located, Given a Move 187
11.3 Case Study 1: Panel Study of Income Dynamics 190
11.4 Case Study 2: Health and Retirement Study 196
11.5 Discussion 200
Acknowledgements 201
References 202

12 The Use of Respondent Incentives on Longitudinal Surveys 205
Heather Laurie and Peter Lynn

12.1 Introduction 205
12.2 Respondent Incentives on Cross-Sectional Surveys 206
12.2.1 Effects of Incentives on Response Rates on Mail Surveys 206
12.2.2 Effects of Incentives on Response Rates on Interviewer-Administered Surveys 207
12.2.3 Effects of Incentives on Sample Composition and Bias 207
12.2.4 Effects of Incentives on Data Quality 208
12.2.5 Summary: Effects of Incentives 208
12.3 Respondent Incentives on Longitudinal Surveys 208
12.4 Current Practice on Longitudinal Surveys 211
12.5 Experimental Evidence on Longitudinal Surveys 218
12.5.1 Previous Experiments on UK Longitudinal Surveys 221
12.5.2 British Household Panel Survey Incentive Experiment 222
12.6 Conclusion 229
Acknowledgements 230
References 231
19 Assessing the Temporal Association of Events Using Longitudinal Complex Survey Data
Norberto Pantoja-Galicia, Mary E. Thompson and Milorad S. Kovacevic

19.1 Introduction
19.2 Temporal Order
  19.2.1 Close Precursor
  19.2.2 Nonparametric Test for Close Precursor
19.3 Nonparametric Density Estimation
  19.3.1 Kernel Density Estimation
  19.3.2 Local Likelihood Approach
19.4 Survey Weights
  19.4.1 Assessing the Standard Error
19.5 Application: The National Population Health Survey
  19.5.1 Pregnancy and Smoking Cessation
  19.5.2 Subsample
  19.5.3 Interval-Censored Times
  19.5.4 Results
19.6 Application: The Survey of Labour and Income Dynamics
  19.6.1 Job Loss and Separation or Divorce
  19.6.2 Subsample
  19.6.3 Interval-Censored Times
  19.6.4 Results
19.7 Discussion
Acknowledgements

20 Using Marginal Mean Models for Data from Longitudinal Surveys with a Complex Design: Some Advances in Methods
Georgia Roberts, Qunshu Ren and J.N.K. Rao

20.1 Introduction
20.2 Survey-Weighted GEE and Odds Ratio Approach
20.3 Variance Estimation: One-Step EF–Bootstrap
20.4 Goodness-of-Fit Tests
  20.4.1 Construction of Groups
  20.4.2 Quasi-Score Test
  20.4.3 Adjusted Hosmer–Lemeshow Test
20.5 Illustration Using NPHS Data
  20.5.1 Parameter Estimates and Standard Errors
  20.5.2 Goodness-of-Fit Tests
20.6 Summary
References
21 A Latent Class Approach for Estimating Gross Flows in the Presence of Correlated Classification Errors

Francesca Bassi and Ugo Trivellato

21.1 Introduction
21.2 Correlated Classification Errors and Latent Class Modelling
21.3 The Data and Preliminary Analysis
21.4 A Model for Correlated Classification Errors in Retrospective Surveys
21.5 Concluding Remarks
Acknowledgements
References

22 A Comparison of Graphical Models and Structural Equation Models for the Analysis of Longitudinal Survey Data

Peter W. F. Smith, Ann Berrington and Patrick Sturgis

22.1 Introduction
22.2 Conceptual Framework
22.3 Graphical Chain Modelling Approach
22.4 Structural Equation Modelling Approach
22.5 Model Fitting
22.6 Results
22.7 Conclusions
