Acid-etched retained bridges, 45, 70, 71
Activators, 54
AERBs. See Acid-etched retained bridges
Aesthetics. See Dental aesthetics; Facial aesthetics
Alignment, 1
Alveolar bone preservation
  bringing teeth into line of dental arch and, 42, 44
  megadont tooth management and, 47
Ankylosis, fused or geminated teeth and, 47
Anterior crosses bites
  causing forward displacement of lower central incisors, 35
  early treatment of, reasons for, 35
  extractions and, 35, 36
  posterior coverage and correction of, 36
  showing potential damage involving tooth wear and
    periodontal involvement, 35
  simple removable appliances in treatment for, 36
  of upper right central incisor, 35
Anterior occlusal radiographs, 15
Anteroposterior (A-P) plane, clinical assessment of, 9, 10
Anteroposterior (A-P) skeletal relationship, clinical assessment of, 9, 10
Appliance therapy
  behavioral management and, 58
  thumb/digit sucking and, 30, 30
Appliance time, reducing, 64
Appliances. See also Functional appliances; Orthodontic appliances
care of, 57
  first fit and, 55, 57
  fixed, for closing anterior incisor spacing, 34
  posterior expansion and, 37
  removable, for anterior crosses bites, 36
  younger patient and compliance with, 51
Arch expansion
  upper, with removable appliance to eliminate unilateral
    crossbite, 38
  views of, 37
Asymmetries
  mandibular displacements as cause of, 12
  mild transverse, 11
Attractive smiles, importance of, 9
Autotransplantation, of crowded premolars, considerations with, 42
Balance, facial aesthetics and, 9
Band and loop space maintainers, submerging lower left second
deciduous molar and, 43, 46, 46
Behavioral management, appliance therapy and, 58
Bite planes, anterior crosses bites and, 35
Bite registration, overbite and, 55
Bonded attachments, failure rate of, 64
Boys, peak height velocity in, 5
Buccal crosses bites, 33
Calvarium, growth of, 5
Canines
  as ‘cornerstone’ of arch, 62
  ectopic, extraction of, 65
  impacted
    incidence of, 62
    palatally, upper left and surgical access, 63
    permanent, early extractions and path of eruption of, 63
    primary, extraction of, 39
    crowding and, 32, 32
    preventing center-line shift and, 32
Caries, 14
CBCT. See Cone-beam computed tomography
Center-line shift, preventing, early extraction of primary canines and, 32
Central incisors
  geminated, 47
  large upper, managing, 48
  managing space for, 70–71
  mesiodens supernumeraries preventing eruption of, 43
  tuberculate supernumeraries preventing eruption of, 42
  unerupted, 42, 45
Cephalometric evaluation, 16–17
Chincup therapy, 59, 60, 61
Chondrocranium, 2
Clark Twin Block, 54
Class I malocclusions, 50
Class I molar relationship, stable, leeway space and, 50
Class I relationship, maxilla position relative to mandible and, 9
Class II malocclusions, treatment option for, 51
Class II sagittal problems. See Sagittal problems: Class II
Class III malocclusions, treatment options for, 59
Class III sagittal problems. See Sagittal problems: Class III
Class III skeletal pattern, managing space for missing central
  incisors and, 70
Class III traction elastics, 59
Clinical assessment
  of A-P skeletal relationship, 10
  of facial symmetry, 11, 12
  of lower anterior face height, 11
  of maxillary mandibular angle, 11
  of overjet, 12, 12
tools, 10
Closed surgical exposure, bonding of attachment
  intraoperatively, 62, 63
Cognitive behavioral management, thumb/digit sucking and, 30
Compliance with appliances
  better facial balance and reinforcement of, 53
  functional appliances and, 57–58
  Quadhelix appliances and eliminating need for, 38
  younger patients and, 51
Condylar cartilage, traditional view of, 3
Cone-beam computed tomography, 17–18
  developmental anomalies detected with, 21, 21–22
  impacted/ectopic teeth detected with, 18
  managing space for missing central incisors and assessment
  with, 71
  root fracture detected with, 22, 23
  root resorption association with impacted teeth detected
  with, 18–19, 19
  supernumerary teeth detected with, 19, 20, 21
  tooth position assessed with, 42
uses for, 17
  volumetric data set obtained with, 18
Cortical drift principle, 4
Cranial base, growth of, 2
Craniofacial growth and development, 4–5
  cephalometric evaluation of, 16
  components in, 2
  genetics and, 5
Craniofacial skeleton, growth and development of, 2
Crossbites
  anterior, 35, 35, 36
  appliance wear and, 30
  posterior, 37–38
  correcting, 33
  unilateral, upper arch expansion with removable appliance for
  elimination of, 38
Crowding, 52, 61
  assessing on OPG radiographs, 16
  closing anterior space for missing lateral incisors and, 64
  large upper central incisors (megadont teeth) and, 48
  leeway space and, 50
  managing space for missing central incisors and, 68
  of permanent lateral incisors, 32–34
  poor prognosis first molars and, 71
  of primary canines, before and after extraction, 32, 32
  severe, OPG radiographs showing management of with
  interceptive extractions, 42
  study casts and assessment of, 23
  submerging deciduous second molars and, 45, 46
Crown form, composite, bonding to adjacent tooth, 69
Cybernetic model of growth regulation, 5
Delayed eruption, supernumerary teeth and, 42
Dental aesthetics. See also Facial aesthetics
  age considerations and need for, 26
  life-long cosmetic restorative treatment and, 68
Dental arch, 9
  non-appliance guiding of adult teeth into line of, 34
  shape of, 1
  thumb/finger sucking and distortion of, 29
Dental attractiveness, goals in aiming for, 1
Dental history, 9
Dental mirrors, 10
Dental panoramic tomograms
  localizing impacted teeth with, 18
  supernumerary tooth associated with upper left central incisor
  in, 20
Dental tissue, quality and morphology of, 1
Dental wax, postured position for functional appliance and, 57
Dentition position, racial and sexual differences in, 9
Development, defined, 2
Developmental anomalies, CBCT and detection of, 21, 21–22
Digit sucking, 29–30
  asymmetric open bite due to, 29
  preventing, with fixed thumb guard, 30
Digital photography, 24
Dilaceration of root, unerupted tooth and, 42
Displacement principle, 4
DPTs. See Dental panoramic tomograms
Early interceptive treatment, premise behind, 1
Eating, large upper labial frenum and effect on, 48
Ectopic teeth, 62–65. See also Impacted teeth
  CBCT and detection of, 18
  incidence of, 62
  occlusal guidance and, 39
  severely, complex orthodontic treatment for, 44
Ectopically positioned teeth
  early assessment and, 15
  managing, methods of, 42
  Enamel hypoplasias, 14
  Endochondral ossification, 2
  Epiphyseal plate, 3
Expansion, early, as effective environment for permanent tooth
  development, 33
Expansion appliances, 30
Extractions
  anterior crossbites and, 35, 36
  assessing crowding on OPG radiographs and, 16
  early
  of deciduous anterior teeth, to guide permanent canines
  more easily, 63
  path of eruption of permanent canines and, 61
  of primary teeth and unaesthetic spaces seen during teenage
  years, 67
  early treatment of Class II sagittal problems combined
  with, 52
  of ectopic canines, 65
  good oral hygiene and, 33
  interceptive
    crowding and, 33
    of impacted teeth, 63
    OPG radiographs showing management of severe crowding
    with, 41
  poor prognosis first permanent molars and, 71
of premolars, managing space for missing central incisors and, 71
of primary canines, 62
to prevent center-line shift, 32
understanding consequences of crowding for patient and, 33
of second deciduous molars, 45, 71
serial, 39, 40–41
of upper left maxillary canine, final occlusion after, 65
Extraoral photographs, 25

Face, growth patterns of, 4
Facemasks, 59
Facial aesthetics
factors related to, 9
good, description of, 11
Facial attractiveness, importance of, 9
Facial form
assessment of, 11–12
overall impression of, 9
Facial growth, directions of, 2
Facial profile, early treatment of Class II sagittal problems and, 52
Facial proportions, vertical, assessing, 10–11
Facial skeleton
growth fields and, 3–4
growth of, 5
Facial sutures, adaptive growth and, 3
Finger sucking. See Digit sucking; Thumb/finger sucking
Finger/thumb splints, 30
Fixed appliance treatment, decline in, 39
Fixed appliances, 54, 59
Class III malocclusion treated with, 60, 61
for closing anterior incisor spacing, 34
gold chain attached to, 62, 62
leeway space management and, 50
Fixed thumb guard, 30, 30
Food traps, submerging lower left second deciduous molar and, 45, 46
Fracture and luxation, of anterior teeth, 52
Fränkel appliances, 54
Fränkel II functional regulator (FRII), 55
Frankfort plane, 10
Functional appliances
bite registration and, 55
compliance and, 53
day-to-day management of, 57
first fit for, 55, 57
maintaining any changes and, 53
parental involvement and, 55
poor compliance and, 57
serial extraction combined with, 39
struggling child and, 58
tooth movement pattern and, 53
types and designs for, 54, 54–55
Functional matrix theory, 5
Functional regulator II appliance, 54, 55
Fused teeth
CBCT showing extent of root and crown contact, 22, 22
planning for, 47
Geminated teeth
CBCT and assessment of, 22
central incisor, 47
planning for, 47

General dental practitioners (GDPs), referrals by, 1
General environmental influences, skeletal morphogenesis and, 5
General epigenetic factors, skeletal morphogenesis and, 5
Genetic factors, growth and, 5, 6
Gingival contour, 1
Gingival loss, deep bite and, 13
Gingival margin, managing space for missing central incisors and, 70–71
Girls, peak height velocity in, 5
Glass Ionomer cement, Quadhelix appliance and use of, 37
Gold chain
attaching to fixed appliance, 64
attaching via an elastic to temporary anchorage device, 64, 64
bonding to impacted tooth, 63
bonding to unerupted tooth, 42
Growth
of cranial base, 2
defined, 2
of mandible, 3–4
mechanisms of, 2
of mid-face, 3
of nasomaxillary complex, 4
what we know about, 1–5
Growth pattern, 2, 4
Growth rate, 2, 4–5
Growth regulating mechanism, 2, 5
Harmony, facial aesthetics and, 9
Head posture, overall impression of, 9
Headgear
protraction, treatment of Class III malocclusion with, 60, 61
serial extraction combined with, 39
Height velocity, peak, in girls and boys, 5
Heredity, growth and, 5
Hybrid appliances, 54
Hypodontia, 15, 37
Impacted incisors, managing: the treatment sequence, 43
Impacted teeth, 62–65
CBCT and detection of, 18
root resorption associated with, 18–19, 19
defined, 62
establishing prognosis for, 62
treatment options for, 62
surgical exposure, categories, 62–64
Implants, 45, 66, 68, 71
Incisor spacing, anterior, closing with use of fixed appliances, 34
Incisors
central
geminated, 47
mesiodens supernumeraries preventing eruption of, 43
tuberculate supernumeraries preventing eruption of, 42
unerupted, 42, 45
clinical assessment of
at about age 7, 62
overjet and, 12–13, 13
functional appliance and changes in, 57
fusion of, periapical radiograph showing, 22
impacted, 62
managing: the treatment sequence, 43
large upper central, 48
Incisors (cont’d)
lateral
   moved into central incisor position, 45, 45
   preparing patients for provision of replacement, 70
   replacement of one missing, 69
   lip traps and, 49
lower central, anterior crossbite causing forward displacement of, 35
   missing
   central, managing space for, 70–71
   lateral, closing anterior space for, 67–69, 69
   lateral, opening anterior space for, 69–70
   upper lateral, 65–66
   upper right, 66
   permanent lateral, crowding of, 32–34
   proclination of upper, risk of trauma and, 51
   prominent, retroclination of, 53
   upper, normal size of, 47
   upper right central, anterior crossbite of, 35
Informed consent
   managing space for missing central incisors and, 71
   retainer wear and, 37
   unilateral missing lateral incisors and, 67
Interceptive extractions
   crowding and advantages with, 33
   OPG radiographs showing management of severe crowding with, 41
Interocclusal equilibration, closing anterior space for missing lateral incisors and, 65
Intramembranous ossification, 2
Intraoral anchorage arches, leeway space and use of, 50, 50
Intraoral photographs, 25
Intraoral rulers, overjet and overbite measured with, 12, 12
Intrinsic genetic factors, skeletal morphogenesis and, 5
Intrusive activators, 54
Jaws, 9
   cephalometric evaluation of position of, 16
   growth and development of, 2–4
Labial frenum, prominent, removal of, 48–49
Large teeth, managing, 47, 48
Lateral cephalograms, 18
Lateral cephalographs and analysis, 16, 17
Lateral incisors
   fused or geminated teeth and, 47
   missing
      opening anterior space for, 69–70
      replacement of, 69
      upper, 65–66
   moving into central incisor space, 45, 45
   permanent, crowding of, 32–34
   replacement, preparing patients for provision of, 70
Leeway space
   defined, 50
   intraoral anchorage arches and, 50
   preserving, with palatal and lingual arches, 50–51, 51
Lingual arch
   preserving leeway space with, 50, 50
   for stabilizing molar position and arch length after loss of primary second molar, 46
   using to provide point of traction, 63
Lip apart posture at rest, 13, 13
Lip line
   managing space for missing central incisors and, 67
   upper, closing upper anterior space and, 65
Lip traps, 13
   causing proclination of upper central incisors and retroclination of lower incisors, 49
   causing proclination of upper right central incisor, 49
   early treatment of, 49
   eliminating, 53
Local environmental influences, skeletal morphogenesis and, 5
Local epigenetic factors, skeletal morphogenesis and, 5
Lower anterior face height, clinical assessment of, 11
Malocclusions. See also Sagittal problems: Class II
   Class II, treatment options for, 51–55
   Class III, 59
   fused or geminated teeth and, 47
   thumb/finger sucking and, 29
Mandible
   chincup and restraint of, 59
   growth of, 3–4
   Class III patients and, 59
   orthodontic change and, 24
   rough position of maxilla relative to, 9
Mandibular condyle, cartilage of, 3
Mandibular displacement, due to crossbites with displacements, 12
Mandibular rotations, cephalometric evaluation of, 16
Mastication muscles, functional appliances and, 54
Maxilla
   Class III patients and growth of, 59
   facemasks and protraction of, 59
   orthodontic change and, 24
   rough position of, relative to mandible, 9
Maxillary arch expansion, for child vs. for adult, 37
Maxillary canine, impaction of, 62
Maxillary complex, direction of growth of, 4
Maxillary incisors, unerupted supernumerary teeth and impaction of, 19
Maxillary mandibular angle, clinical assessment of, 11
Median diastema, large upper labial fraenum and, 48
Median opening activator, 54, 55
Medical history, 9
Megadont teeth
   managing, 47, 48
   orthodontic tooth movement and restorative management of, 48
Mesiodens supernumeraries, preventing eruption of central incisors, 43
Mid-face, growth of, 3
Missing teeth, 65–72
   closing anterior space for missing lateral incisors, 67–69
   managing space for missing central incisors, 70–71
   missing posterior teeth, 71–72
   missing upper lateral incisors, 65–66
   missing upper right lateral incisor, 66
   opening anterior space for missing lateral incisors, 69–70
   poor prognosis first permanent molars, 71
MM angle, assessing, 10–11
Molars
deciduous second, submerging, 45–46
first permanent
poor prognosis, 71
pre- and post-extraction of, showing good replacement by
second molars, 72
third, impacted, 62

Nail paint, 30
Nasal septal cartilage, growth of, 3
Nasomaxillary complex, growth of, 4
Non-compliance, clearly stating downsides of, 57

OB. See Overbite
Occlusal guidance, modern, 39
Occlusal radiographs, 18
Odontomes, 62
OJ. See Overjet
Open bite
anterior, forward tongue position, 13
asymmetric, due to digit sucking, 29
Open surgical exposure, packing with subsequent bonding of
auxiliary attachment and, 62
OPG radiographs. See Orthopantogram (OPG) radiographs
Oral hygiene, 13, 14, 64
acid-etched retained bridges and, 45
extractions and, 34
Orthodontic alignment with surgical exposure, ectopic/impacted
teeth and, 62
Orthodontic appliances
orthodontic change and, 24
patients who do well and not so well with, 26
Orthodontic change, scope of, 24, 26
Orthodontic traction, impacted teeth and, 18, 19
Orthodontic treatment
planning and, 38
reasons for, 26
success vs. failure of, 26
timing of, 26
Orthognathic surgery, Class III sagittal problems and, 59
Orthopantogram (OPG) radiographs, 15, 34, 62
for identifying maxillary canine position using vertical
parallax, 15
posterior expansion and assessment with, 37
showing management of severe crowding with interceptive
extractions along, 41
showing path of eruption of permanent canines after early
extractions, 43
simple assessment of space requirements with, 15
submerging deciduous second molars and, 45
unerupted central incisor assessed with, 42

Overbite
appliance wear and, 30
assessment of, 12
bite registration and, 55
soft tissue damage and, 13
study casts and, 23

Overjet
appliance wear and, 30
clinical assessment of, 12, 12
functional appliance and reduction in, 58
functional regulator II appliance and, 55
increased, treatment sequence for management of, 52–53, 56
trauma risk and, 13
trauma to incisors and, 52

Palatal arches, preserving leeway space with, 50, 50
Parallax. See Vertical parallax
Parental involvement, importance of, 57–58
Periodontal disease, 14
Periosteum, as osteogenic zone, 4
Permanent teeth, comprehensive treatment and presence of, 26
Photographs, 24, 25
extraoral, 25
intraoral, 25
Physical growth status of child, assessing, 9
Plaque indexes, 14
Plaster study casts, space analysis on, 24
Posterior crossbites, 37–38
Poor prognosis first permanent molars, management of, 68–69
Posterior teeth, missing, 71–72
Premolars
first
erupted and ready for extraction, 40
extraction of, 39
rotating, and mesio-distal width of tooth, 68
second
erupting and ready for alignment if required, 40
impacted, 62
impacted, submerging lower right second deciduous molar
and, 46
missing, 71
Primary teeth
early extraction of, 15
and unaesthetic spaces seen during teenage years, 67
Protraction headgear, 59, 60, 61
Pubertal growth spurt, 5, 26, 51
Quadhelix appliances
eliminating need for patient compliance with, 38
for expanding upper dental arch and correcting lateral arch
dimensions, 31
Glass Ionomer cement and use of, 37
posterior expansion and, 37, 38
uses for, 30
Radiographs, 15. See also Orthopantogram (OPG) radiographs
Relocation principle, 4
