negative feature (UMNS) 20, 23  
acquired brain injury (see brain injury, upper motor neuron syndrome)  
Arm Spasticity Patterns 37  
case examples 42, 43, 45, 139, 140  
average range of motion (AROM) 85, 91–2, 130, 131, 132, 134, 136  
avtivity and participation 83  
avtivity-capacity 84, 85  
avtivity–performance 84  
alternatives to goniometer 103  
body structure and function 8  
classification tools 37–41, 85  
concept map 83, 116  
dystonia 107  
formal 19, 83–6  
impairment factors 19, 24, 69, 80, 85, 86  
individualised upper limb 87, 119–27  
International Classification of Functioning, Disability and Health (ICF) 80, 81  
linking assessment/intervention/performance 28, 30, 37, 81, 86, 87  
movement patterns 85, 91–9, 130, 135–7  
muscle and joint dynamics (blocking and supporting joints) 94–8  
muscle and joint dynamics case examples 98–9  
observational 19, 92, 93  
pasive range of motion (PRM) 99–104, 129, 130, 131, 134, 135, 136, 139, 140–1  
positive and negative features (see separate entries, positive/negative features)  
personal and environmental contexts 81, 82–3  
purposes 19, 80  
rang of motion (ROM) case examples 101, 102, 130, 131, 134–5, 139, 140–1  
spasticity/hypertonicity 104–7  
spasticity/hypertonicity case examples 130, 131, 134–5, 136, 139–10  
task analysis 86  
upper limb patterns 37–43  
assess ment tools  
ABILHAND 85  
ABILHAND-Kids 85  
Action Research Arm Test (ARAT) 81, 84  
Activity Participation Questionnaire 83  
Arm Spasticity Pattern classification 37  
Ashworth Scale of Muscle Spasticity 104  
Assisting Hand Assessment 85  
Australian Spasticity Assessment Scale 106  
Canadian Occupational Performance Measure (COPM) 84, 85, 87  
Care and Comfort Caregiver Questionnaire 84  
Care and Comfort Hypertonicity Questionnaire 84  
Children’s Participation Questionnaire 83  
classification tools 37–41, 85  
Comparative Analysis of Performance – Motor (CAP-M) 86, 87, 92, 93  
Comparative Analysis of Performance – Motor (CAP-M) example 117  
Functional Arm Activity Behavioural Observation System 85  
Functional Independence Measure (FIM) 83  
Goal Attainment Scaling (GAS) 81, 84, 85, 87  
Gschwind & Tonkin forearm pattern classification 37, 38  
House Functional Classification System 350  
House, Gwathmey & Fidler thumb pattern classification 40–43  
Manual Ability Classification Scale (MACS) 85  
Melbourne Assessment of Unilateral Upper Limb Function (MAUULF) 84, 350  
Modified Ashworth Scale of Muscle Spasticity (MASMS) 104–6  
Modified Barthel Index 83  
Modified Tardieu Scale of Muscle Spasticity 104–6  
Modified Tardieu Scale of Muscle Spasticity – Quality of Muscle Reaction 104  
Motor Assessment Scale (MAS) 84  
Participation and Environment Measure for Children and Youth 83  
Personal and Social Performance Scale 83  
Quality of Upper Extremity Skills Test (QUEST) 84  
Upper Limb Assessment in Daily Living Scale (ULADL) 84–5  
Upper Limb Hypertonicity Assessment Form 119–27  
Zancolli & Zancolli hand pattern classification 38–40  
asociated reactions  
and contracture 31  
and spasticity 31  
case example 42  
causes of 27, 32  
cerebral palsy 31  
description of 31  
mirror movements 31, 42  
positive feature (UMNS) 20, 24, 25  
stroke 31

description of 28, 32
differentiating from contracture 36
differentiating from dystonia 31
differentiating from hypertonicity 36
differentiating from stiffness 30
Hypertonicity Intervention Planning Model 29
impact of reduction 29, 81
impact on daily activity 81
neural component of hypertonicity 33
positive feature of the upper motor neuron syndrome 20, 25, 29
spastic hyperreflexia 32, 33
spasticity/hypertonicity measurement
case examples 130, 131, 134–5, 136, 139–40
splints
addressing positive and negative features of UMN syndrome within 210–13
commercially-produced 189–90, 200–1, 214–16, 216
cone 204, 211
designs 213–14, 230–73
Index

splints (continued)
dynamic 189–90, 200–1, 214–15
education to client about 223, 274–7
effect on contracture 194–6
effectiveness of, related to chronicity of condition 192–4
elbow 195–6, 206, 215, 230–6
evidence-based practice related to 190
fabrication principles 218–23
fabrication instructions 230–73
for flaccidity 206
forearm 208, 236–7
functional 198–202, 207, 248–73,
360–1, 363
functional position within 208–10
hand-based 259–73
indications 202, 203
joint immobilisation within 205–6
joint support within 205–6, 207–8
length of effect 197
length of wearing time 197
lyra 201–2, 206, 207–8
materials 207–8, 219–20
mechanisms of effect 186–90
neoprene 207–8, 236–7, 270–1
padding within 221–2
patterns 219, 230–73
position within 196, 208–13
pre-fabricated 214–16
prescription 202–13
purposes 205–7
research evidence for 190–202
resting hand 191–8, 204–5, 238–48
resting position within 208–10
soft 201–2, 207–8
strapping 222–3
thermoplastic 207, 219–20, 231–4,
238–46, 248–57, 259–69, 272–3
thumb 198–9, 259–71
to alter patterns of movement/provide mechanical advantage 188, 207
to maintain joint alignment and positioning 188, 205, 207
to maintain muscle length/prevent contracture 187, 194–6, 205–7
to promote upper limb function 188, 189–90, 198–202, 207
to provide prolonged, low-load/constant/sustained stretch (see also stretch) 186–8, 205–6, 213
to reduce spasticity/hypertonicity 188–9, 192–4, 205–7
wearing schedules 196–8, 216–18
wrist 199–200, 248–59
stiffness 19, 28, 33
(see also muscle, connective tissue, hypertonicity)
adaptive 33
and spasticity 28
joint 19, 36
immobility 33
strength (see muscle)
stress recovery (see stretch)
stress relaxation (see stretch)
stretch 16, 17
(see also splints to provide prolonged low-load/constant/sustained stretch)
active (isometric) 187, 279
Cochrane Review of 191
creep 16, 17, 187, 206, 279
high-load 16
low-load, maintained, constant, prolonged 16, 186–8
optimal length of time for 187–8
passive 16, 187
stress recovery 17
stress relaxation 16, 17, 187, 205, 279
stretch pain tolerance 187
pain threshold point 16
stretch reflex 17
stroke (see brain injury, upper motor neuron syndrome)
submaximal range of motion 292–3
(see also casting, positioning within)
