Contents

Contributors, vi
Preface, vii
Foreword, ix

Part 1 Principles of clinical pharmacology
1 Pharmacodynamics and pharmacokinetics, 3
2 Clinical trials and drug development, 11

Part 2 Aspects of therapeutics
3 Drugs and gastrointestinal disease, 19
4 Management of coronary artery disease and its complications, 29
5 Primary and secondary prevention of cardiovascular disease, 52
6 Drugs used to treat respiratory disease, 71
7 Drugs used to treat neurological disease, 81
8 Treatment of psychiatric disorders, 97
9 Antimicrobial therapy, 111
10 HIV and antiretroviral treatment, 132
11 Travel medicine and tropical disease, 143
12 Drugs and endocrine disease, 153
13 Drugs and the reproductive system, 169
14 Drugs and the urological system, 178
15 Cancer therapeutics, 185
16 Drugs and inflammatory joint disease, 197
17 Immunopharmacology, 204
18 Drugs and the blood including anticoagulants and thrombolytic drugs, 215
19 Drugs used for pain relief and anaesthesia, 228

Part 3 Practical aspects of prescribing
20 Clinical pharmacokinetics: dosage individualisation, 241
21 Influence of renal and hepatic disease on pharmacokinetics and pharmacodynamics, 247
22 Prescribing for the young and the elderly, 252
23 Drugs in pregnant and breastfeeding women, 255
24 Pharmacoeconomics: the economic evaluation of new drugs, 262
25 Poisoning and drug overdose, 269
26 Drugs you may need in a hurry, 283
27 Prescribing and its pitfalls, 287

Self assessment questions, 294
Self assessment answers, 299
Index, 302
