INDEX

AASI see Abel Assessment for Sexual Interest

AB see attentional blink

Abel Assessment for Sexual Interest, 31–55, 146, 208–210, 225–6
accuracy of, 55
cautions when using the AASI, 54–5
cross-validation and replication attempts, 41–4
detection of dissimulation, 45–7
development of VT as measurement of sexual interest, 32–7
directions for future research, 53–4
methodology of the AASI, 37–41
recent advances in VT research with non-AASI methods, 51–3
stages of attraction and arousal, 31–2
statistical adequacy of, 44–5
use with adolescents, 47–9
use with special populations or contexts, 49–51
Abel Screen, 31–2, 37–8, 40–1, 43–4, 49–51, 53–4
Abel–Blasingame Assessment System, 50
accuracy of AASI, 55
acoustic stimulation, 204
adolescents and use of AASI, 47–9
aesthetic response, 145
affect response latency, 94–6, 126–8, 132, 164, 170
affective lexicon, 170
Affinity, 51, 59–84, 146
archetype ranking, 62–4
conclusions and speculation, 81–3
data arising from, 77–81
development of, 60–62
image-rating task, 64–70
ipsatized scores in, 70–7
age, 94
age assessment, 8–9
age–sex IAT, 183–4, 187–9, 191, 195
aggression and Stroop, 162–3, 167
alcohol, 32, 107, 128, 179
alternative approach to measurement of sexual interest, 203–24
anticipatory anxiety, 215–7
anxiety, 153–4, 161, 166, 169, 179, 215–7
appetitive gazing, 69, 74, 82, 203–5
approach response, 145
arachnophobia, 181–2
archetype ranking, 62–4, 76, 80
arson, 112, 173
art, 9–13
assessing sexual interest with the emotional Stroop test, 159–76
assessing sexual offenders using RSVP paradigm, 153
Association for the Treatment of Sexual Abusers, 10–1, 211
associations that can be measured by IAT, 107–8
ATSA see Association for the Treatment of Sexual Abusers
attachment, 76
attention control technologies, 25
attention span, 85–6
attention-based models of sexual interest, 88–9
attentional bias, 85–6, 178–82, 196
attentional blink, 147–53, 203–24
and RSVP, 147
theories of, 147–53
attentional capture, 151–3
see also attentional blink
attentional dwell time, 148
attractiveness, 63–5, 69–72, 93, 125, 131–2, 138, 185–7, 213–5, 218, 220
auditory analogues, 160–1
autogynephilia, 23
automatic association, 104–5, 126–8
automatic morphing, 24–5
automaticity, 160
awareness, 151
background to cognitive modelling, 85–6
Balanced Inventory of Desirable Responding, 131–2, 134
Barlow strain gauge, 7–8, 23–4
Bayesian language, 76
Beck Depression Inventory (BDI), 166
bestiality, 40
BIDR see Balanced Inventory of Desirable Responding
bimorphism, 75
binary logistic regression, 193
biological imperative, 76
bisexual paedophilia, 22
bisexuality, 75
blindsight, 101
blink magnitudes in sexual offenders, 220–1
blood circulation, 7
body image, 107, 179
Bonferroni conversion, 189–90, 192, 194–5
bottom-up saliency, 151–2
boy-object child molestation, 15
brain damage, 54
Brown (2006), 113–4
Brown, Gray and Snowden (2008), 114–6
carrying out implicit association tests, 188–9
carrying out Stroop task, 183–5
cautions when using AASI, 54–5
change and limitations of PPG, 20–1
child custody, 49–50
child molestation, 31–7, 125–43, 145–55
molesters’ implicit cognitions of self, 125–43
rapid serial visual presentation test, 145–55
child–sex IAT, 112–8
Brown (2006), 113–4
Brown, Gray and Snowden (2008), 114–6
Gray et al. (2005), 112–3
limitations, 117–8
Mihailides, Devilly and Ward (2004), 116–7
Nunes, Firestone and Baldwin (2007), 116
choice reaction time measures, 85–99, 146, 178
choir boys, 66–7
chronological stages of arousal, 145
circumferential method of PPG, 8
clinical evaluation, 145
clinical implications of emotional Stroop, 172–3
clinical implications of RSVP, 154–5
clinical use of IAT, 118–9
facilitator to understanding cognitions, 118
indicator of change, 119
cognition and PPG, 26
cognitions about self and children, 125–43
cognitive attention-based models of sexual arousal and interest, 88–9
cognitive modelling of sexual arousal, 85–99
background to cognitive modelling, 85–6
confounds, 92–5
CRT and sexual interest, 89–92
dangerous offender designations, 85
future considerations, 95–6
information processing, 86–7
IP and cognitive attention-based models of sexual arousal and interest, 88–9
reaction times and sex research, 92–5
cognitive–affective model of arousal, 86
Cohen’s d, 105, 113, 170, 188
colour–word Stroop, 160
comparing child molesters and non-sex offenders, 131–3
comparing cognitive measures of sexual interest, 177–97
comparing IATs, 188–9
comparing pictorial modified Stroop and IAT, 192–4
gay and straight reaction times, 195–7
implicit association task, 185–7
influence of order on observed data, 194–5
issues with IAT scoring algorithms, 187–8
modified Stroop task, 179–80
pictorial modified Stroop task, 180–2
results of IAT, 191–2
results of Stroop task, 189–91
stimuli used in the Stroop test, 182–3
comparing pictorial modified Stroop task and IAT, 192–4
concatenation, 171–2
confounds in reaction times and sex research, 92–5
consolidation of information in short-term memory, 155
INDEX 231

construct of interest, 137
construct validity, 13–15
constructive approaches to working with offenders, xi–xii
Correctional Service Canada, 131
courtship, 69, 76, 80–82
crime prevention, xi–xii
criminogenic needs, xii, 12, 138
critical review of AASI, 31–55
Cronbach alphas, 77, 109
cross-validation of AASI VT measure, 32, 41–4
CRT see choice reaction time measures
CRT and sexual interest, 89–92
cyberpsychology, 25
D-scores, 109, 114
dangerous offender designations, 85
data arising from Affinity, 77–81
Daubert v. Merrell Dow Pharmaceuticals, 18–19
debriefing, 66, 70, 77
defection, 42, 168, 213–4
defensiveness, 138, 203–5, 209
degradation, 16
delayed gratification, 167
denial, 38, 48, 76, 115–6, 213
Denier-Dissimulator probability model, 50–1
depression, 94, 166, 169, 180
detection of dissimulation, 45–7
detumescence, 10
development of Affinity, 60–2
development of VT as measurement of sexual interest, 32–7
development of VT validity measure, 59–84
deviance index, 79
defiant sexual interests, 13–15, 17, 19–20, 59–60, 208–10
defiant sexual stimuli, 210–13
differentiation between gay and straight men, 177–97
differentiation between sexual offenders and non-offenders, 173–4
diminished startle eyeblink, 210–13, 221
directions for future VT research, 53–4
dishonesty, 73, 76
dissimulation, 32, 45–7, 60–61, 115, 118, 209–10, 213
distinctive characteristic of child molesters, 138–9
distractibility, 63
distress variables, 135
disturbed emotional functioning, 217
drug abuse, 179
E-Prime, 166
eating disorders, 107, 179, 181
ecological validity, 14, 25
effective assessment of sexual interest, 225–7
effector fatigue, 92
electromyographic activity, 204
EMG see electromyographic activity
emotional Stroop test, 89, 146, 159–76
aggression and Stroop, 162–3
clinical implications of, 172–3
differentiation between sexual offenders and non-offenders, 173–4
emotional Stroop, 161–2
explaining Stroop effect for sexual interest, 171–2
potential problems with, 169–70
problem of sexual interest and valence, 164–5
running emotional Stroop in forensic environment, 165–6
sexual behaviour and Stroop, 163–4
strengths of, 168–9
Stroop effect, 160
Stroop variants, 160–1
used on sexual offenders, 166–8
empirical taxonomy, 170
enhanced non-suppressing PPG, 21
erectile dysfunction, 86
erective response, 8, 14, 16, 19–20, 22, 24–5
erotic preference, 53–4, 128
ethnicity, 96, 107, 181
ETS see eye-tracking systems
evaluating stimulus content, 21–2
event-related potentials, 149–51
exhibitionism, 22, 34, 37, 40–1, 48, 53
explaining Stroop effect for sexual interest, 171–2
exposing oneself, 215
extrafamilial child molestation, 9, 12, 90
Extrinsic Affective Simon Task, 117–8
eye contact, 128
eye-tracking systems, 25–6
facilitation of understanding cognitions, 118
fading, 23–4
faking IAT, 109–10
faking RSVP, 154
fantasies, 87, 169, 173
fatigue, 92, 154
fetishism, 22, 37, 40–1, 48
filial affection hypothesis, 80
flaccidity, 8
flanker variants, 161
flatliners, 35
fMRI research see functional magnetic resonance imaging research
focus groups, 170
forensic assessment, 129
