REACH see Registration, Evaluation and Authorisation of Chemicals
reactive nitrogen species (RNS) 291
reactive oxygen species (ROS) 291, 295–6, 309–10
receptor-mediated interactions 11
recommended dietary intake (RDI) 77
recommended dose limits 119
refined radioelements 115, 125, 127
Registration, Evaluation and Authorisation of Chemicals (REACH) 12, 20, 30–1, 170–2, 208, 220
regulatory systems 27–51
air quality 42–6
background context 27–8
biosolids for agricultural use 38–43
current regulations on chemicals 28–34
guideline values 34–46
soil-guideline values 38
water-quality guideline values 35–8
relative risk 14
repeatability 15
residual oil fly ash (ROFA) 265
Restriction of the Use of Certain Hazardous Substances (RoHS) 29–30
resveratrol 237
risk assessments (RA) 28
risk-characterisation ratios (RCR) 219–20
RNS see reactive nitrogen species
ROFA see residual oil fly ash
RoHS see Restriction of the Use of Certain Hazardous Substances
ROS see reactive oxygen species
Royal Commission on Environmental Pollution (RCEP) 32, 183, 198
sample size 17–18
SBF see soya based formula
scientific evidence 19–20
sediment contamination
essential trace elements 65–7
fertilisers 196–7
industrial chemicals 148
radioactivity and radioelements 126–7
toxic trace elements 96–100
selective serotonin reuptake inhibitors (SSRI) 209, 216
selenium
anthropogenic sources 62–3
deficiencies 55, 74–6
environmental pathways 63–5, 66–7, 68
hazardous properties and toxicology 56–8, 74–6
natural sources 59–60
serotonin-noradrenalin reuptake inhibitors (SNRI) 209
sewage sludge see municipal solid waste
SGV see soil guideline values
Silent Spring (Carson) 21, 27, 182
soil contamination
essential trace elements 64–7, 78–9
fertilisers 196
industrial chemicals 148, 162–4
nanomaterials 302–3
naturally occurring oestrogens 242
pesticides 189–90
radioactivity and radioelements 126, 132–3
toxic trace elements 91–2, 94–100, 103–4
soil guideline values (SGV) 38, 78–9
source–pathway–receptor model 69, 107–8
soya based formula (SBF) 246
specific incidence 14
socio-economic data 17
source-pathway-receptor model 69
socio-economic impact 21
soil contamination
essential trace elements 64–7, 78–9
fertilisers 196
industrial chemicals 148, 162–4
nanomaterials 302–3
naturally occurring oestrogens 242
pesticides 189–90
radioactivity and radioelements 126, 132–3
toxic trace elements 91–2, 94–100, 103–4
soil guideline values (SGV) 38, 78–9
source–pathway–receptor model 69, 107–8
soya based formula (SBF) 246
specific incidence 14
spore-producing micro-organisms 261
SSRI see selective serotonin reuptake inhibitors
standardisation 14
statistical analysis 18
steroid disruption 187
steroid oestrogens 229–30
carcinogenicity 244–5
dietary contribution 242–4
endogenous production 243
environmental pathways 241–2
hazardous properties 238–9
human health impacts 243–5
risk reduction 248–9
sources 240–1
structures 230
strontium 125, 129
strontium-neodymium-lead isotope ratios 268, 270
study design 17–18
sufficiency of evidence 20
sulfur dioxide 43–6
sulfuric acid 186
SWCNT see single-walled carbon nanotubes
synergism 10–11

TCE see trichloroethylene
TDS see testicular dysgenesis syndrome
technologically enhanced naturally occurring radioactive material (TENORM) 127–8
TEL see tetraethyl lead
TENORM see technologically enhanced naturally occurring radioactive material
teratogenicity 169
testicular cancer 244
testicular dysgenesis syndrome (TDS) 247
tetraethyl lead (TEL) 87
thallium 88
anthropogenic sources 93–4
environmental pathways 100–1
hazardous properties 90, 107
natural sources 91, 92
properties 94
thorium 119, 122–6, 133–6, 138–9, 141
time series 17
tissue proteins 186
tissue-weighting factors 118
titanium dioxide nanoparticles 291, 300, 302–3, 307, 309–11
tobacco smoking 70, 163, 272, 275
total ozone mapping spectrometry (TOMS) 262
Toxic Substances Control Act (TSCA) 33–4
toxic trace elements (TTE) 87–114
airborne particles 257, 260–1, 265
anthropogenic sources 92–4
bioaccessibility 101–3
environmental pathways 94–101
hazardous properties and toxicology 89–90, 103–7
human health effects 103–7

human health exposure pathways 101–3
natural sources 90–2
properties 94
risk reduction 107–8
toxicodynamics 7–8
toxicokinetics 7
toxicology 5–13
animal models 11
chemical interactions 10–11
dose–response relationships 8–10, 11, 23
duration of exposure 6, 7
endocrine disruption hypothesis 22–3
essential trace elements 56–8
hazard characterization criteria 11–12
hormesis 9–10
low dose responses 8–9
mechanisms of toxicity 6–8
nanomaterials 289–94, 304–12
pharmaceuticals and personal-care products 219
regulatory systems 34–5
routes of exposure 6
scientific evidence 19

trace elements see essential trace elements; toxic trace elements
transport emissions 257, 261, 265–6, 280
trichloroethylene (TCE)
environmental pathways 163–4
hazardous properties 148, 153, 157, 165, 167–70
risk reduction and future trends 170–2
sources and applications 158, 161
TSCA see Toxic Substances Control Act
tschimganidine 237
tschimgine 237
TTE see toxic trace elements

uncertainty 20–3
UNCLOS see United Nations Convention of the Law of the Sea
UNEP see United Nations Environment Programme
United Kingdom (UK) regulations 32–3, 35–6, 38–40, 44–7
United Nations Environment Programme (UNEP) 29, 152
United States of America (USA) regulations 33–4, 36, 38–40, 44–7, 208
uranium 116, 119–31, 133–5, 138–9, 257
USEPA see Environmental Protection Agency
validity 15
very persistent and very bioaccumulative substances (vPvB) 12, 152
veterinary pharmaceuticals 208, 210, 212
VGSC see voltage-gated sodium channels
vinyl chloride 149
viruses 261
volcanic ash 256, 261, 263–4, 270, 279
voltage-gated sodium channels (VGSC) 194
