Index

adipocytes, 148
aging, 143–5
aldehyde adducts, 75, 78
alpha-linolenic acid, 37, 45, 48
biosynthesis, 43–4
competition, 46
Alzheimer’s disease, 153
antioxidants, 85–6
network, 143
sportive activity, 140
arachidonic acid
biosynthesis, 44–5
cardiovascular health, 147
desaturase index, 122
excess in Land’s cycle, 53–4
mediator lipidomics, 94
ophthalmology, 153
oxidative pathways, 74–5
prostaglandin pathways, 74
RBC content, 112–13
silent inflammation indicator, 123
trans isomers, 72
atrial fibrillation, 147
blood lipids, 108–9
blood withdrawal, 109
cardio indicator, 123–4
cardiolipin, 103
cardiovascular health, 145–8
carnitine
fatty acid transport, 32
cellular defence and immunity indicator, 123
cellular stress, 95–100
cholesterol
biological role, 17–18
PUFA excess, 18
saturated fatty acid feedback, 19
cholesteryl ester formation, 80–81
cis-trans isomerase, 36
cis-trans isomerisation
bacterial, 70
coenzyme A, 31
conjugated dienes, 76
conjugated linoleic acid (CLA) isomers
antitumoral activity, 70
biological activity, 69–70
cysteine, 32
delta-5 desaturase index see also FADS, 122
delta-6 desaturase index see also FADS, 122, 150
delta-9 desaturase/stearoyl CoA desaturase (SCD), 29–30
index, 122
deodorization, 66–8
desaturase enzyme, 26, 30, 35
  alcohol inhibition, 35
  cofactors, 35, 45
  inhibition, 45
  maternal milk, 35
  trans fatty acid inhibition, 35
digestion
  lipids, 100–103
dihomo gamma linolenic acid (DGLA)
  cellular defence and immunity indicator, 123
  desaturase index, 122
  functions, 45
  inflammation control, 55
  mediator lipidomics, 94–5
  proliferation control, 55
docosahexaenoic acid (DHA), 46–7
  foods, 47
  neuro indicator, 124
  neurology, 151–3
  ophtalmology, 153–4
  pregnancy, 142
double bond
  cis geometry, 9
  notation, 7
  trans geometry, 9
eicosanoids, 50
eicosapentaenoic acid (EPA), 46
  cellular defence and immunity indicator, 123
  trans isomers, 68
eicosatrienoic acid, 45–6, 56
  elongase enzyme (ELOVL), 25
  PUFA biosynthesis, 42
epigenetics, 91
erthrocyte membrane, 107–9
  conservability, 109
  fatty acid cluster, 115–16
  fatty acid interval values, 116
essential fatty acids (EFA), 41–4
  balance, 56–7
  RBC evaluation, 112–13
  syndrome, 49

fatty acid (FA)
  beta oxidation, 21–2, 30, 32
  cell volumes, 13

Dietary Reference Values, 59
  nomenclature, 7
  pool, 13, 17, 60–61
  in membrane lipidomics, 93
  stress remodeling, 97–100
  RBC composition, 110–114
  recommended intakes (EFSA), 128
  structural roles, 40–41
  structures, 7
  therapy, 131–3
  tissue composition, 39, 136
fatty acid-based nutraceuticals, 128–31
fatty acid desaturase enzyme (FADS), 43–4
  delta-5 and delta-6 desaturase index, 122
fatty acid synthase (FAS), 23
  insulin, 24
  leptin, 25
Fenton reaction, 74–6
food deprivation, 141
food pyramid, 21–2, 146
free fatty acids (FFA), 54
free radical theory of aging, 143
functional lipidomics, 93
gallbladder, lipid metabolism, 61
gamma-linolenic acid, 44–5
gas chromatography (GC), 29
gene expression, 91
glaucoma, 153
glycolipids, 5

Hayflick phenomenon, 143
4-hydroxynonenal formation, 75
inflammaging, 145
inflammatory pathways, 44, 55, 74
  mediator, 93–4
  skin, 150
  sportive activity, 140
isoprostanes, 79
Land’s cycle, 50–54
lecithins, 103
lecithin cholesterol transfer proteins (LCAT), 80
leukotrienes
  synthesis, 45–6
L-glycerol, 5, 11
linoleic acid, 37, 48
   biosynthesis, 42–4
cardiolipins, 103–4
   reactivity, 83–4
lipid code, 93
lipid hydroperoxides, 75–6
lipid isomerisation
   free radicals, 71–3
   oxidation, 73–7
lipidome, 88
lipidomic analysis, 159–61
lipidomic diet, 132
lipidomic platform, 118
lipidomic profiles, 118
   aging, 143–5
   cardiovascular health, 145–8
dermatology, 150–151
neurology, 151–3
ophthalmology, 153–4
overweight, 148–50
pregnancy, 140–42
sport, 137–40
lipoproteins, 79–82
   oxidation, 79, 81
   trans fatty acids, 81
liposome, 16
lipoxins, 45, 147
lysophospholipid, 53
   stress response, 97
macular degeneration, 154
malnutrition in pregnancy, 141
mature erythrocyte, 109–10
mediator lipidomics, 93
   inflammation signalling, 94
membrane
   adipocyte, 148
   compartmentalization, 4, 11
   critical aggregation concentration
      (CAC), 4, 11, 16
   fluidity, 18
   homeostatic control, 14
   remodelling, 14, 50–54, 97–100, 148–9
   replication, 62–4
membrane unbalance index, (MUI), 117–19
   significance, 119–20
metabolic pacemaker, 144
metabolic slowness, molecular indicator, 122–3
microbial attack, 98
molecular indicators, 122–5
molecular profiles, 157
mono-trans isomers, 72
monounsaturated fatty acids (MUFAs)
   nomenclature, 8
natural phospholipids, 103
neuro indicator, 124
neuroprotectins, 46
nuclear factor NF-kB, 98
nutraceutical supplementation, 117, 127–33
nutrigenomics, 91
nutrilipidomics, 92, 127–33
obesity and overweight, 148–50
oils
   deodorization, 10
   partial hydrogenation, 10
oleic acid
   biosynthesis, 28
   reactivity, 83
   structure, 7, 28
omega-3
   cardiovascular health, 146
   deodorization treatment, 10
   foods, 48
   health effects and trans geometry, 68
   intake for signalling, 94
omega-3 risk index, 49, 123
   cardio indicator, 123–4
omega-6/omega-3
   balance, 56, 149, 150
   cardiovascular health, 147
   index of lipid biosynthesis, 121
   intake for signalling, 94
   neurology, 152
   ratio, 58
   RBC membranes, 112
   silent inflammation indicator, 123
p-53 pathway, 96–7
palmitic acid
   biosynthesis, 23–4
   nutritional label, 38
   structure, 8
palmitoleic acid
  biological roles, 29
  biosynthesis, 29–30
  desaturase index, 122
  metabolic slowness, 122
  obesity biomarker, 149
  RBC composition, 111
  structure, 8

partial hydrogenation, 66
peroxidation/peroxidizability
detection methods, 77, 79
index, 144
life span, 144
mechanism, 76–7
phosphatidylinositol 3-phosphate (PI3P), 5
phospholipase enzymes, 45, 50
  Land’s cycle, 52–4
phospholipid
  biosynthesis, 31–3
  double layer, 4
  formation, 100–103
  structure, 11
plasma lipids
  blood drop, 107–8
polyunsaturated fatty acids (PUFA)
  aging, 143
  biosynthesis, 37, 41–7
  in foods, 61
  nomenclature, 8
  nutraceuticals, 131
  peroxidation process, 76–7
  prostanoid precursors, 50
  reactivity, 75–6
  supplementation, 57–8
pregnancy, 140–142
prostaglandins
  series 1-2-3, 45–6
  synthesis, 45, 50, 74–5
radical stress indicator, 124
resolvins, 46
sapienic acid, 29–30
  in lipoproteins, 81–2
saturated fatty acids (SFAs), 23–8
  biosynthesis, 23–8
  cardio indicator, 123–4
  desaturase enzyme, 34–5
  food sources, 26
  hardening effect, 8, 27
  health effects, 27
  neurology, 153
  nomenclature, 8
  RBC composition, 111
  recommended intakes, 27
  structures, 23
SFA/MUFA ratio
  index of lipid biosynthesis, 120–121
  metabolic slowness, 122
  RBC composition, 111
  silent inflammation, 57, 123
  single nuclear polymorphism, 89
  predictive power, 90
  skin functionality, 150
  sport, 137–40
stearic acid
  biosynthesis, 25
  stearidonic acid, 45
  stearoyl CoA-desaturase, 29
  stress response, 95–6
  toll-like receptors (TLR), 98–9
trans fatty acids (TFA)
  cardiovascular risk, 147
  dermatology, 151
  dietary intakes, 10, 67
  endogenous formation, 10–11
  free radical isomerisation, 71–3, 83–4
  geometrical and positional
    isomers, 66–7
  geometry, 9
  health problems, 67
  monounsaturated, 29–30
  neurology, 153
  nutrition, 66–8
  pregnancy, 142
  radical stress indicator, 124
  regulations, 67–8
  threshold in humans, 72
triglycerides
  digestion, 101–2
  tromboxanes, 45
unsaturation index, 144
vaccenic acid, 30
whole blood lipids, 108
