INDEX

Page numbers followed by n indicate note numbers.

A

Absolute return, 593
Accumulation and distribution, 40–53, 211
   extended rectangle bottom, 48–49
Accumulative average, 112
ACD method, 295
Active portfolio weights, 595
Adaptive markets hypothesis (AMH), 602, 609–610
Adaptive Trading Model, 583
A/D oscillator, 182–186
Advance-decline system, 226–227, 762
Advance Market Technologies (AMTEC), 782–783n2
Advances in financial machine learning, 631
ADX line, 89–90
Alexander filter, 680
Allais Paradox, 407
Alpha
   description of, 593
   method, 517–518
   returns, 593
American Association of Individual Investors (AAII), 436
Amex QQQ volatility index, 404
AMH. See Adaptive markets hypothesis
AMTEC. See Advance Market Technologies
Anchoring, 418–419
Animal spirits, 617
Annualized rate of return, 810
Apex, 248, 290
Appel, Gerry, 221
APT, 736n22
Arbitrage, 703–705
   limits of, 711
Arguments, 644–648
ARIMA. See Autoregressive integrated moving average
Aristotle, 638–639, 644
Arithmetic moving average, 74
Arms, Richard, 204
   Arms index, 219–220
Arms index (TRIN), 219–220
Array
   investing and, 512
Ascending triangle, 248, 249–250
Aspray, Thomas, 212
   demand oscillator, 212–213
Asset allocation, 504
   intrinsic value of, 596
Athens General Index, 526–527
ATR. See Average true range
Autoregressive integrated moving average (ARIMA), 485–491
   forecast results, 489
   Kalman filters, 490–491
   mean-reverting indicator, 637
   slope, 490
   trading strategies, 489–490
   use of highs and lows, 490
Autoregressive model, 100–101
Average-modified method, 107
Average-off method, 107
Average true range (ATR), 82
Average volume, 205

B

Backtesting, Statistics of, 627–636
   price data, 629–631
   statistical concerns in, 632–636
   time-series price data, 628–629
Bacon, Francis, 655–656
Bailout, 268
Bands, 21, 92–95, 125–134
   confidence, 491–493
   formed by highs and lows, 125
   rules for using, 131–132
   trading strategies using, 94–95
Bandwidth indicator, 95
Barberis, Shleifer, and Vishny (BSV) hypothesis, 724–726
Bar chart, 241
   interpretation by Charles Dow, 7–25
   long-term patterns with best performance and lowest risk of failure, 264–265
practical use of, 64–68
price objectives for, 54–60
Bar chart patterns, 234–266. See also Patterns
classic patterns, 243–258
learning objective statements, 234
overview, 234–235
Base, 248
Bat indicator, 555
Bayes’ theorem, 735n9
Bearish belt-hold, 318
Bearish key reversal, 32
Bear market
end of, 12
formation, 10
phases, 11–12
signal, 10
transition from bull market, 15
traps, 67
Behavioral finance, 608–609, 710–729, 739n84
anchoring and adjustment to, 713–714
bias and, 712–713
competing hypotheses of, 723–729
diffusion of information among investors, 718–719
foundations of, 711–712
herd behavior, 717–718
imitative behavior and, 717
information cascades, 717–718
investor attention shifts, 719
investors’ stories, 714–715
limits of arbitrage, 711
limits of human rationality, 711–712
optimism, 715
overconfidence and, 608
pattern recognition and, 238–239
psychological factors of, 712–716
role of feedback in systematic price movements, 720–722
sample size neglect, 715–716
social factors of, 716–722
Bernard, V., 736n19
Beta
description of, 593–594
returns, 593–594
Blau, William, 189
tick volume indicator, 213–214
Blow-off, 43
Bogle, John, 600, 610–611
Bold conjecture, 665. See also Popper, Karl
Bollinger bands, 92–93, 128–132, 133–134
combined with other indicators, 134
modified, 129–130
