orientation 102, 103, 105
vertical posture 108, 109
postural support 186
restraining support 156
splinting 186, 188
stabilisation 107, 109, 158, 159
standing to sitting 90, 91
unlocking 91

upper limb coordination for reach 168

Trunk Impairment Scale 68

upper limb/upper limb function
activity 186, 188
improvement 158
alignment
cooperative 86
for movement between sitting and standing 98
dorsolateral system 155
elevation 162
functional reach 162, 164–9
hand 170–4, 175–7, 177
patient awareness 158
pointing task 164
postural control 155–7
proximal stability 156
reach pattern 161
recovery 154–78
capacity 49

rotation 200, 201
shoulder complex 157–62
sit to stand transition 85–6
support 158, 159, 187, 190
trunk coordination for reach 168
ventromedial system 155
upper motor neuron (UMN) lesion 4
movement compensation 12
upper motor neuron (UMN) syndrome 10–11
validity 69
ventromedial system, upper limb 155
verbal feedback, concurrent augmented 27
vestibular information 28, 29–30
visual field
arm positioning 190
hand positioning 190
target location 164–5
visual information 28, 29–30
visual overuse reduction 156
visual recognition for grasp 169
walking 125
body weight support treadmill training 127–9
cortical control 119
essential requirements 118–19
ideation of goal 120, 122
initiation 93
integrated control 118
return to work 194
walking aids, postural control/balance 156
weakness 13
weight bearing 13
weight transfer 197
wheelchairs 185
tilt-in-space 187
work, return to 194–202

World Health Organization (WHO), International Classification of Function, Disability and Health 65–6

wrist
activation 164, 165
contactual orientating response 103
extension 169, 196
postural control 200
