Preface to the Second Edition ix  
Preface to the First Edition x  

### Part 1  Communities: Basic Patterns and Elementary Processes  

1 Communities  
   1.1 Overview 3  
   1.2 Communities 3  
   1.3 Communities and their members 7  
   1.4 Community properties 14  
   1.5 Interspecific interactions 18  
   1.6 Community patterns as the inspiration for theory: alternate hypotheses and their critical evaluation 19  
   1.7 Community patterns are a consequence of a hierarchy of interacting processes 22  
   1.8 Conclusions 23  

2 Competition: Mechanisms, Models, and Niches 24  
   2.1 Overview 24  
   2.2 Interspecific competition 24  
   2.3 Mechanisms of interspecific competition 26  
   2.4 Descriptive models of competition 27  
   2.5 Mechanistic models of competition 33  
   2.6 Neighborhood models of competition among plants 40  
   2.7 Competition, niches, and resource partitioning 46  
   2.8 The many meanings of the niche 46  
   2.9 Other ways of thinking about the niche 50  
   2.10 Guild structure in niche space 54  
   2.11 Conclusions 55  

3 Competition: Experiments, Observations, and Null Models 58  
   3.1 Overview 58  
   3.2 Experimental approaches to interspecific competition 58  
   3.3 Experimental studies of interspecific competition 62  
   3.4 Competition in marine communities 62  
   3.5 Competition in terrestrial communities 65  
   3.6 Competition in freshwater communities 74  
   3.7 An overview of patterns found in surveys of published experiments on interspecific competition 79
3.8 Null models and statistical/observational approaches to the study of interspecific competition 85
3.9 Conclusions 88

4 Predation and Communities: Empirical Patterns 90
4.1 Overview 90
4.2 Predation 90
4.3 Examples from biological control 91
4.4 Impacts of predators on different kinds of communities 93
4.5 Examples of predation in marine communities 93
4.6 Examples of predation in terrestrial communities 97
4.7 Examples of predation in freshwater communities 105
4.8 Inducible defenses 110
4.9 When is predation likely to regulate prey population size and community structure? 111
4.10 Overviews of general patterns based on reviews of experimental studies of predation 116
4.11 Trade-offs between competitive ability and resistance to predation 116
4.12 Conclusions 119

5 Models of Predation in Simple Communities 120
5.1 Overview 120
5.2 Simple predator–prey models 120
5.3 Models of predation on more than one prey 128
5.4 Models of intraguild predation 132
5.5 Models of infectious disease 133
5.6 Conclusions 135

6 Food Webs 136
6.1 Overview 136
6.2 Food-web attributes 136
6.3 Patterns in collections of food webs 144
6.4 Explanations for food-web patterns 147
6.5 Other approaches to modeling food-web patterns 153
6.6 Experimental tests of food-web theory 155
6.7 Omnivory, increasing trophic complexity, and stability 159
6.8 Interaction strength 162
6.9 Some final qualifications about empirical patterns 163
6.10 Conclusions 165

7 Mutualisms 166
7.1 Overview 166
7.2 Kinds of mutualisms 166
7.3 Direct and indirect mutualisms 167
7.4 Simple models of mutualistic interactions 167
7.5 Examples of obligate mutualisms 171
7.6 Energetic and nutritional mutualisms 174
7.7 Examples of facultative mutualisms and commensalisms 179
7.8 Theories about the conditions leading to positive interactions among species 181

Part 3 Large-Scale, Integrative Community Phenomena

12 Causes and Consequences of Diversity
   12.1 Overview
   12.2 Equilibrium and non-equilibrium communities
   12.3 Experimental studies of community stability and alternate stable states
   12.4 Examples of stable community patterns
   12.5 Equilibrium explanations for diversity
   12.6 Situations where diversity may result from non-equilibrium dynamics
   12.7 Stability and complexity
   12.8 Productivity–diversity curves
   12.9 Effects of diversity on the variability of processes
   12.10 Effects of diversity on invasibility
   12.11 Conclusions

13 Succession
   13.1 Overview
   13.2 Succession
   13.3 A brief history of succession
   13.4 Quantitative models of ecological succession
   13.5 Case studies of succession in different kinds of habitats
   13.6 Effects of plant succession on animal assemblages
   13.7 Succession in microbial assemblages
   13.8 Conclusions

14 Applied Community Ecology
   14.1 Overview
   14.2 Anthropogenic changes and applied community ecology
   14.3 Epidemiology of animal borne diseases
   14.4 Restoration of community composition and function
   14.5 Biological control of invasive species
   14.6 Biomanipulation of water quality
   14.7 Management of multispecies fisheries
   14.8 Optimal design of nature preserves
   14.9 Predicting and managing responses to global environmental change
   14.10 Maximization of yield in mixed species agricultural and biofuel systems
   14.11 Assembly of viable communities in novel environments
   14.12 Conclusions

Appendix: Stability Analysis
