– stacking fault interactions 173
solute–vacancy complex 104
specific heat 240–243
stacking fault interactions 173
stair-rod dislocation 165
steady-state flux 223
stoichiometric fraction 117

strain energy 144–147
strain hardening 154, 162, 168–170, 175, 178, 187, 190–193, 195, 288, 296
strain rate sensitivity (SRS) 193
strength coefficient 191
strengthening (hardening)
– mechanisms 167–177, 225
– from fine particles 174–177
– precipitation strengthening 175–177
– grain size strengthening 170–172
– solid solution strengthening 172–174
– strain hardening 168–170
stress, and creep rupture 216–218
stress corrosion cracking (SCC) 255–258
stress field, of dislocations 142–144
– edge dislocation 143, 144
– screw dislocation 142, 143
stress–strain curves 184–195
stretcher strains 187
superficial Rockwell test 198
superjogs 156
Suzuki effect 173
swelling behavior 278, 280, 282–285. see also
void swelling
– effect of irradiation temperature 280
– ferritic/martensitic steel vs. austenitic
stainless steels 283

t	tangled networks 168
Taylor’s factor 171
tensile cycle 230
tensile deformation 203
tensile ductility 204, 230
tensile properties
– anisotropy in 195
– strain rate effect on 192–195
– stress–strain curves 184–192
– temperature effect on 193–195
tensile stress 132, 144, 183, 201, 211, 235, 287, 288
tensile test 181, 184, 185, 193, 230, 257, 295, 302
tensile toughness 189
tension–compression stress cycle 228
tension–compression test 229
tension–compression-type loading 236
tension test 185, 188
thermal barriers 195
thermal conductivity 246–248
– of ceramic materials 248
thermal expansion 244, 245
– coefficient 169, 240, 244, 245
thermal gradient 246
