a posteriori segmentation, 156
a priori segmentation, 155
A–not A method, 80, 93
abnormality detection, 99
acceptance data, 9–10, 112, 113, 115, 157–8
additional consumer attributes, 147–9, 163–4
additional sample attributes, 149–52
additive consumer effects, 135
AIC (Akaike’s information criterion), 123, 232
ANCOVA (analysis of covariance), 115
ANOVA (analysis of variance) (see also Brockhoff–Sommer ANOVA model, mixed model ANOVA, multi-way ANOVA, one-way ANOVA, three-way ANOVA, two-way ANOVA), 113–15, 193–4
model diagnostics, 241–4
relationship to regression analysis, 232–3
ASCA (ANOVA simultaneous component analysis), 64–5
assumptions (model diagnostics), 241
auctions, 9
average preferences, 135
base alternatives, 121
Bayesian statistics, 258
beta-binomial models, 89, 90–2
bi-plots, 216–17
BIBDs (balanced incomplete block designs), 189
binomial distribution, 177–8
blind tasting, 6
block experiment designs (blocking), 185, 188–90
box plots, 16, 17, 99, 169, 170
Bradley-Terry-Luce method, 123
Brockhoff assessor model, 52
Brockhoff–Sommer ANOVA model, 52
categorical models, 56
categorical variables, 115, 117, 178, 234–5
CCDs (central composite designs), 187
chaining effects (cluster analysis), 252
chemical methods, 68
chi-square test, 178, 179
choice based methods, 120–3
segmentation, 162–3
choice data, 3
choice sets, 122
choice tests, 9
circular models, 143
classification analysis/clustering, 147, 157–9, 160, 249–51
FCM (fuzzy clustering method), 161–2, 162, 254–6
finite mixture model clustering, 162, 258–9
hierarchical clustering, 251–3
K-means clustering, 254
noise clustering, 257–8
residual distances, 256–7
sequential clustering, 257, 258
simultaneous clustering, 160–3
cluster matrices, 259–60
collinearity problem (regression), 230–1, 237
collinearity problem (regression), 230–1
complete block experiment designs, 189
complete linkage, 252
certainty intervals, 171
conjoint data, 106
consensus matrices, 265
consensuses, 70
consonance analysis, 34–5
consumer data, 219–20
consumer effects, 117

Statistics for Sensory and Consumer Science  Tormod Næs, Per B. Brockhoff and Oliver Tomic

284  Index

cconsumer loadings, 132, 133–5, 137, 138, 142
cconsumer studies, 1, 2
cconsumer variables, 115
ccontingency tables, 178
ccontinuous models, 56–7
ccontinuous variables, 115, 117–18, 166, 234–5
ccontrol charts, 172
ccontrol limits, 172
correction methods
scaling differences, 40–3
unreliable assessors, 43–4
correlation, 173–5
correlation loadings, 22–3, 61, 134, 137, 138, 217–19
correlation plots, 30–2
covariance, 174
covariance criterion, 238
covariance matrices, 175
cross-validation, 119, 232, 235, 239, 240–1
CVA (canonical variate analysis), 62
data (statistics), 165
data compression methods, 236
data matrices/tables, 210–11
data sets, 97–8, 128
degrees of freedom, 167–8, 194
dendrograms, 252–3
descriptive sensory analysis, 5–6, 67
design factors, 108
design of experiments (see experiment designs)
difference tests (see discrimination tests)
discriminant analysis, 244–5, 246
discrimination tests, 7, 79–6
comparison with similarity tests, 87–9
level 1 analysis, 81–2
level 2 analysis, 82
power analysis, 85–6
Thurstonian approach, 81, 82–5, 86–7
distributions (statistics), 166, 167–9
eggshell plots, 33, 34
elliptic models, 143
empirical validation, 220–1
error variance, 176
estimates, 169
experiment designs, 102–6, 181–91
block designs, 188–90
fractional factorial designs, 103, 104–5, 187–8
full factorial designs, 104, 185–7
nested designs, 190–1
power, 191
product presentation, 105–6, 189–90
split-plot designs, 106, 190
explained variances, 213, 217, 221, 239
extended ANOVA tables, 53
external preference mapping (PREFMAP), 131, 132, 133, 137, 141, 159
external validation, 68, 72–4
F-distribution, 167, 168
F-values, 28, 29, 43
factor analysis (FA), 224–5
factor effects, 98–9, 106–7, 108
FCM (fuzzy clustering method), 161–2, 162, 254–6, 260
filtered data, 44
finite mixture model clustering, 162, 258–9
formal equivalence testing, 88
fractional factorial experiment designs, 103, 104–5, 111, 150, 184, 187–8, 201–3
free choice profiling, 36
Friedman test, 120, 271
Frobenius norm, 265
full factorial experiment designs, 104, 184, 185–7, 188
fuzzy clustering method (FCM), 161–2, 162, 254–6, 260
GCA (generalised canonical analysis), 74, 75, 267–8
gender effects, 113–15
generators, 188
GLMs (generalised linear models), 245–6
GPA (generalised procrustes analysis), 74, 264–5
hierarchical clustering, 251–3
histograms, 16, 17, 99, 166
homogeneity tests, 179–80
hypothesis testing, 169–72, 176–8, 179–80
ideal point preference mapping, 130, 132, 141–3, 144, 162
IIA (independent of irrelevant alternatives) assumption, 122
incomplete block experiment designs, 189
individual assessor matrices, 36
individual effects, 116
individual line plots, 33–4, 55
INDSCAL (individual MDS) method, 271
industrial experiments, 186
interactions, 182, 185–6, 198, 199
internal preference mapping (MDPREF), 131–2, 133, 134
joint ANOVA approach, 108–11
joint modelling, 118
