INDEX

Page references followed by fig indicate an illustrated figure; followed by t indicate a table.

A
Abstracts: description of, 144; examples of proposal, 144–147
Active consent, 32
Active for Life (AFL), 45
Activities approach models, 102
Adolescent tobacco use assessment: background information on, 104; community inputs for Y-Start Now program based on, 104–105; literature review and health problem information included in, 105; using logic models to plan intervention based on, 105–111t, 112t
Adult vaccination intervention, 181–182
Advocacy coalition framework, 62/fig–63
Agency for Healthcare Research and Quality, 98
Alcohol use intervention program, 182–183
Alma Ata Declaration, 6–7
American Cancer Society, 30, 168, 169, 170, 171
American Heart Association, 169, 170
American Lung Association (ALA), 169, 179, 180
Annie E. Casey Foundation, 20
Anonymity, 33
Apple’s iPhone, 172
Aspen Institute, 22
Assessments: capacity, 85; community needs and strengths, 84–91; needs, 85. See also Evaluating interventions
Asthma interventions: Open Airways for Schools (OAS), 179–181; organizational level of child asthma prevention, 42, 44t
ATLAS.ti (software), 75
Attrition, 119–120

B
Background and significance section, 147
Baseline data, 130
Basic priority rating system, 89
Behavioral capability, 57t
Blogging, 169
Boilerplate information, 147–149
Boolean operators, 98
Breast cancer programs, 47
Breast and Cervical Cancer Mortality Prevention Act, 47
Budget: description of, 150; grant writing tips for beginners on, 154–155; in-kind or nonmonetary support included in, 150; indirect costs, 151, 154; OTPS (other than personnel services), 151; personnel category of, 151
Budget justification: description of, 150; example of HIV prevention intervention, 152t–153t

C
Canadian Institutes of Health Research, 98
Capacity assessment, 85
Capital Region Task force (New York), 183
Cardiovascular disease (CVD): NYHHP (New York Health Hearts Program) on, 183–184; Stanford Five-City Project outcomes for, 17
Case finding, 14
Case studies. See Intervention case studies
CBPR (community-based participatory research), 23, 181
Cell phone intervention delivery, 172–173
Center for the Study and Prevention of Violence Blueprint Series, 47–48
Centers for Disease Control and Prevention (CDC): Community Guide initiative of, 98; contract funding offered by, 142; disease incidents reported to, 168; large data sets available from, 66; Minnesota Arthritis Program sponsored by, 178–179; NBCCEDP program of, 47; PATCH (Planned Approach to Community Health) of, 19–20
Change. See Health behavior change
Child Nutrition and WIC Reauthorization Act, 104
Childhood obesity prevention, 7–8
Children: asthma intervention programs aimed at, 42, 44, 179–181; consent of a minor, 32; preventing obesity of, 7–8; as research participants, 30; sample consent form for parents/guardians of, 31–32; SIDS (sudden infant death syndrome) of young, 185; vaccination program aimed by, 184–185

Chlorea contaminated well (London, 1849), 12

CINAHL database, 97

Closed-ended questions, 69

Cochrane Review, 98

Code of ethics: common attributes of, 28; development of professional, 26–27

Collaborative Institutional Training Initiative, 29

Communication. See Health-related communication

Community: adapting intervention methods to 21st-century, 166–169; assessing needs of, 84–91; using computer games to reach, 171; cultural differences and misunderstandings with, 161; defining, 4–5, 14, 166–167; existing resources and services, 85, 89–90, 123–124; families as embedded in context of, 14; intervention effects on, 14, 19, 184; prevention efforts focused on the, 6–7; target, 5, 9. See also Stakeholders

Community advisory board, 34

Community assessment: adolescent tobacco use example of, 104–111; basic components of, 84–87; community input in, 87–88; description of, 84; identifying priority needs and service gaps, 88–89; strengthening your findings, 87–90

Community assessment components: choosing type of assessment, 85–86; connecting with stakeholders, 84–85; data analysis, 87; data collection, 86; formulating guiding questions, 85; identifying preexisting data, 86–87

Community definitions: by demographic variables, 5; demographic variables used as, 5; geographic boundaries as early, 14; information technology as changing, 166–167; place as, 4; shared concern as, 4–5; of target community, 5

Community foundations, 141

Community Guide, 98

Community input data, 86

Community resources: four types of, 85; identifying existing services and, 89–90; implementation and available, 123–124; improving interface between public health groups and, 170

Community-based health intervention evolution: improving community capacity to plan interventions, 19–20; improving existing strategies and developing new ones, 20–21; improving methods for evaluating interventions, 21–23

Community-based health interventions: assessing evidence from early, 18–19; case studies and practices of, 178–189; definition of, 12; ecological theory applied to, 6; effect size to expect with, 19; evaluating, 128–135, 160–161; evolution of, 19–23; examples of early, 15–18; financing, 140–155; framework for designing, 54–63; the future of, 166–174; goals for, 42–44r, 96; implementation pitfalls, 158–163; implementing, 116r–124; key constructs and activities of, 55r; by levels of prevention, 7–9; planning, 96–112r; principles and assumptions of early, 13–15; rationale for developing, 12–13; sustainability of, 19, 21; virtual experience as method of, 171–174. See also Intervention theory; Public health practitioners

Community-based organizations (CBOs), 181

Community-based participatory research (CBPR), 23, 181

Community-level domain: adult type 2 diabetes prevention, 43r; determining resources for, 123–124; determining resources for implementing, 123–124; ethics related to, 28; intervention implementation at, 116r, 123–124; intervention theory for change at, 60–61; interventions at the, 40; logic models for Y-Start Now program, 108, 110r; prevention of child asthma attacks, 42, 44r; primary prevention at the, 45–46; research existing policies and laws impacting, 123; secondary prevention at the, 47; tertiary prevention at the, 48

Computer games, 171

Concept, 54

Confidentiality, 28, 33

Consent forms: description and function of, 30–31; implementation task of completing, 122; parental or guardian, 31–32. See also Informed consent

Consent of a minor, 32

Construct: definition of, 54; intervention activities and key, 55r; measurements of theoretical, 56; operationalizing the, 54; theoretical, 55

Content: checking scientific literature for examples of, 97; clarifying objectives for, 99–100; consider all options when planning, 99; determining fit of existing intervention, 100–101; examining relevant databases for examples of, 97–98; forums and conferences used to plan, 98–99; implementing intervention issue of, 118; planning intervention, 96–101

Contracts: grants versus, 142; writing proposals for, 143–150

Control group, 132

Convenience sample, 72

Corporate foundation funding, 141

Cross-tabulations (or descriptive analysis), 72–73
Cubs Click It for Safety program, 185–186
Cultural differences, 161
CVD (cardiovascular disease): NYHHP (New York Health Hearts Program) on, 183–184; Stanford Five-City Project outcomes for, 17

**D**

Data: baseline, 130; community input, 86; definition of, 66; follow-up, 71–72; observational, 73; outliers, 77; precoding response, 76e; preexisting, 86–87; saturation, 75; types of, 66–67

Data analysis: community assessment, 87; process of, 75–77

Data collection: pitfalls related to, 161; qualitative, 73–75; quantitative, 67–73; reasons for, 66

Data management plan, 122

Data processing, 66

Data set, 66

Demographic variables: community defined by, 5; health outcomes of environment interplay with, 5–9

Descriptive analysis (or cross-tabulations), 72–73

Diabetes programs: prevention at different levels, 43r; screening for diabetes, 47; selecting goals for, 42

Discussion guide, 74

Domestic violence programs, 46–47, 186–187

Dose measurement, 18

**E**

Ecological domain levels: implementation at all four, 116r; implementation at the community or policy, 116r, 123–124; implementation at the group or organization, 116r, 117r–123; logic models for community-level, 108, 110r; logic models for group-level, 106, 107r; logic models for organization-level, 108–109r; logic models for policy-level, 111, 112r. See also specific ecological domain level

Ecological perspective, 40

Ecological theory: applied to community-based health intervention, 6; on demographic variables, environment, and, 5–9; levels of prevention applications of, 5–9; new research efforts to use, 20; understanding community interventions through, 4

Economic assets, 85

Effect size, 19

Effects: determining size of, 19; herd immunity, 184; synergistic, 14

Elderberry Institute’s Living at Home Block Nurse program, 178

Emergency medical services (EMS), 183

Environment-demographic variables interaction, 5–9

Ethical standards of research: avoiding misrepresentation of findings, 34–35; ensuring quality through, 26, 34; maintaining integrity of research, 35–36; Tuskegee Study violation of, 26

Ethics: APHA’s principles of public health practice, 27; codes of, 26–28; integrated into public health practice, 26–28; research, 26, 34–35

Evaluating interventions: flexibility component of, 135; pitfalls related to, 160–161; potential evaluators used for, 129–130; preparing, 130; proposal component of plan for, 147; reasons for, 128; steps for designing, 130–135; types of, 128–129. See also Assessments

Evaluation case studies: alcohol use intervention program, 183; childhood vaccination program, 185; Cubs Click It for Safety program, 186; Minnesota, Arthritis Program, 179; New York Healthy Hearts Program (NYHHP), 184; Open Airways for Schools (OAS), 180; Quit-Net program, 188–189; sexual assault/relationship violence program, 187; Venue-Intensive Vaccines for Adults (VIVA), 182

Evaluation design: 1: setting a timeline, 130, 131r; 2: establishing objectives and outcomes, 130, 132; 3: determining appropriate type of evaluation, 132–133; 4: selecting reliable indicators, 133–135

Evaluation plan, 147

Evaluators, 129–130

Excel, 75

Expanded Syringe Access Program (ESAP), 48

Expectations, 57r

Experimental group, 132

**F**

Facebook, 169

Facilitator (or moderator), 73, 89

Families: interventions focus on individuals embedded in, 14; larger communities context of, 14

Family (or independent) foundations, 141

Fidelity issue, 101

Financing interventions: components of the budget, 150–155; for continuing and sustaining interventions, 155; contracts versus grants, 142; eligibility for funding, 142; proposals for, 143–150; selecting potential funders, 143. See also Funding sources

Fiscal agent, 154

Five Ps, 61

501(c)(3) organizations, 142

Focus group interviews, 74–75

Folic acid programs, 61
Follow-up data, 71–72
Follow-up questions, 74
Forced-choice questions, 69–70
Formats: checking scientific literature for examples of, 97; clarifying objectives when planning, 99–100; consider all options when planning, 99; determining fit of existing intervention, 100–101; examining relevant databases for examples of, 97–98; forums and conferences used to plan, 98–99; planning intervention, 96–101
Fort McMurray, 61
Foundation Center, 154
Free Rice (web site), 171–172
Fringe benefits, 151
Funders: preparing proposals for, 143–150; selecting potential, 143
Funding sources: contracts versus grants, 142; corporate foundations, 141; eligibility for, 142; government agencies, 140–141; philanthropic foundations, 141; RFAs (requests for applications) to, 140, 143; RFPs (requests for proposals) to, 140, 143; writing proposals to, 143–150. See also Financing interventions

G
Gantt chart, 117, 130
Gates Foundation, 141
Global Health Database, 97
Goals: community health intervention, 42–44; overall, 96; research impacting modification of, 123; selecting, 42. See also Objectives
Gonzalez, Maria, 149, 150
Google Scholar, 98
Government agency funding, 140–141
Grand Theft Auto series (computer game), 172
Grants: contracts versus, 142; writing proposals for, 143–150
Group-level domain: adult type 2 diabetes prevention, 43r; ethics related to, 28; intervention implementation at, 116f, 117–123; intervention theory for change at, 56–59; interventions at the, 40; logic models for Y-Start Now program, 106, 107f; prevention of child asthma attacks, 42, 44r; primary prevention at the, 45; secondary prevention at the, 46
Guardian consent form, 31–32

H
Harm protection, 33–34
Health behavior change: intervention theory on, 56–63; interventions evaluated to impact, 14; interventions as instrument of, 12–15; sustainability of, 19, 21
Health behaviors: intervention focus on changing, 12–15, 19, 21, 56–63; population-based approach to, 13; risky, 13, 46
Health care: primary, 6–7; synergistic effect of programs on, 14
Health care systems: public health approach to, 27, 166–170; understanding limitations of, 7
Health Insurance Portability and Accountability Act (HIPAA), 86
Health problems: adult type 2 diabetes, 42, 43r; asthma, 42, 44r, 179–181; breast cancer, 47; cardiovascular disease (CVD), 17, 183–184; childhood obesity, 7–8; diabetes, 42, 43r, 47; HIV/AIDS, 8–9, 30, 41, 46, 60, 152r–153r, 166; lack of vaccination as, 181–182, 184–185; obesity, 116r–124; planning intervention for, 96–112r; Sexual assault/relationship violence, 46–47, 186–187; tobacco use, 104–111r, 112r, 187–188
Health-Evidence.ca, 98
Health-related communication: as community organizing tool, 168–169; Internet enhancement of, 167–168; Web 2.0 social media used for, 169–170, 171
Herd immunity, 184
HIV/AIDS: example of secondary prevention of, 41; permission and consent during research on, 30; public health adaption to problem of, 166; social media communication on, 169
HIV/AIDS programs: budget justification example for, 152r–153r; needle exchange, 8–9; reducing risk behaviors, 46; strategies for organization-level, 60; testing for pregnant women, 46
HIV/STI programs, 60

I
IBM’s Quit-Net program, 187–189
Impact evaluation, 128
Implementation pitfalls: design-related, 158–159; evaluation-related, 160–161; negative findings, 162; practice-related, 159; staff turnover, 160
Implementing interventions: choosing venue, 121; at the community or policy level, 116r, 123–124; content, timing, and logistics of, 118; to decrease obesity at different levels, 116r; final details for, 122–123; at the group or organization level, 116r, 117–123; one-year implementation timeline, 117f; participant recruitment, 119–121; pilot study for, 73, 121–122; pitfalls of, 158–163; staff training for, 118–119
In-kind support, 150
Incentives, 33
Independent (or family) foundations, 141
Indirect costs, 151, 154
Individual resources, 85
Infant mortality rate, 6
Information technology: cell phones and
Smartphones, 172–173; education and entertainment applications of, 170–171; enhancing health-related communication through, 167–168; limitations of interventions through, 173–174; reaching underserved communities via new, 173; redefining community through, 166–167; surveys administration through, 67, 68; virtual intervention using, 171–172; Web 2.0, 169–170. See also Technology
Informed consent: parental, 31–32; research importance of, 28, 30. See also Consent forms
Institutional resources, 85
Institutional review boards (IRBs): description of, 28–29; responsibility of researchers to, 29; responsibility to research participants by, 29
Instruments: definition of, 68; developing quantitative data collection, 68–71
Internal validity, 21
Internet: education and entertainment applications of, 170–171; enhancing health-related communication through, 167–168; limitations of interventions through, 173–174; reaching underserved communities via, 173; surveys, 67, 68; virtual worlds of the, 171–172; Web 2.0 social media of the, 169–170, 171
Internet surveys, 67, 68
Intervention case studies: alcohol intervention program, 182–183; childhood vaccinations program, 184–185; Cubs Click for Safety program, 185–186; Minnesota Arthritis Program, 178–179; New York Healthy Hearts Program (NYHHPP), 183–184; Open Airways for Schools (OAS), 179–181; overview of, 178; Quit-Net program, 187–189; sexual assault and relationship violence program, 186–187; Venue-Intensive Vaccines for Adults (VIVA), 181–182
Intervention theory: advocacy coalition framework, 62/fig–63; constructs of, 55r–56; definition of theory, 54; ecological theory, 4–9, 20; social cognitive theory, 56–59; social marketing, 60–61; stage theory of organizational change, 59–60. See also Community-based health interventions
Interviews: discussion guide used during, 74; group, 67, 74–75; in-depth or unstructured, 73–74; of key informants, 73; semistructured, 132; structured interview guide used for, 73. See also Surveys

PubMed database, 97

Q

Qualitative data: collecting, 73–75; description of, 67; managing the, 75

Qualitative data collection: interviews used for, 73–75; observational data included in, 73

Qualitative method, 132

Qualitative research, description of, 22

Quantitative data: collecting, 67–73; description of, 67; instruments for collecting, 68–71

Quantitative data collection: developing instruments for, 68–71; of follow-up data, 71–72; sampling and related issues, 72–73; triangulation method of, 68

Quantitative method, 132

Quasi-experimental designs, 14, 133

Questionnaires: definition of, 68; quantitative data collection, 68–71

Questions: closed-ended, 69; community assessment, 85; follow-up, 74; forced-choice, 69–70; open-ended, 69

Quit-Net program, 187–189

R

Randomization, 72

Randomized-controlled trial, 132

Rapid Assessment Procedure, 22

Reciprocal determinism, 57

Recruitment plan, 117

Reinforcement, 58

Reliability, 133–135

Requests for applications (RFAs), 140, 143

Requests for proposals (RFPs), 140, 143

Research: avoiding misrepresentation of findings, 34–35; CBPR (community-based participatory research), 23, 181; data component of, 66–77; databases used for, 97; ensuring ethical standards and quality, 34–35; ethical conduct during, 26, 34–35; improving methods for evaluation, 21–23; maintaining integrity of, 35–36; qualitative, 22

Research participants: children as, 30; permission and informed consent of, 28, 30–32; protection of human subjects and, 29, 33–34; responsibility of IRB to, 29; vulnerable populations as, 29–30

Researchers: ethical standards for, 26, 34–36; responsibility to IRB by, 29

Resources: four types of, 85; identifying existing community, 85, 89–90; implementation and available, 123–124; improving interface between public health groups and community, 170

Respect for individual rights, 34

Respondent fatigue, 70–71

Risk behaviors: intervention focus on, 13; prevention to change, 46

Risk factors: behaviors leading to, 13, 46; intervention focus on, 16–17

Robert Wood Johnson Foundation, 141

Rockefeller Foundation, 141

S

Safe Community Network (WHO), 61

Sample size, 72

Samples/sampling: quantitative approach to, 72–73; size of, 72

Saturation, 75

Scale, 77

School Wellness Council, 104–105, 111. See also Y-Start Now program

Science Citation Index (Web of Science), 97

Scientific literature, 97

Second Life, 171
Secondary data, 66
Secondary prevention: adult type 2 diabetes, 42, 43; asthma attacks among children, 42, 44; ecological focus of, 41; examples at different levels, 46–47; examples of, 7–9; interventions focused on, 7
Self-efficacy, 54, 58
Semistructured interviews, 132
Sexual assault/relationship violence programs: case study on, 186–187; examples of, 46–47
SMART objectives, 99–100
Smartphones intervention delivery, 172–173
Smoking cessation program (Quit-Net), 188–189
Snow, John, 12
Snowball sample, 72
Social cognitive theory, 56–59
Social learning theory, 16
Social marketing theory, 60–61
Social media, 169–170
Specific aims section, 147
SPSS (software), 75
Staff: budget expenses related to, 151; implementation pitfalls related to, 161; problems related to turnover of, 160; proposal description of, 149; training, 118–119
Staff training: implementation task of, 118–119; sample schedule for, 120
Staff turnover, 160
Stage theory of organizational change, 59–60
Stakeholders: connecting with key community, 84; developing working group including key, 84–85; identifying intervention key, 20; as implementation resource, 123–124; interviewing key informants among, 73; negative findings and reactions by, 162; priority needs/service gaps input by, 88–89.
