INDEX

A.A, a.a. (Amino acids), 417–419, 425, 429, 435, 504, see also PN
Abbreviations, 60–67
miscellaneous, 67
to prevent medication errors, 58–59
related to dosage form, 62–63
related to dose/amount dispensed/used, 63
related to drug name, 61–62
related to frequency and modifiers, 64–65
related to indications/procedures, 65–66
related to laboratory values, 66
related to medication strength, 62
related to prescriber, see Prescribing authority, Prescription
related to route, 63–64
ABW (Actual body weight), 420, 444, see also Body weight
Accuracy, 103
in calculations and measurements, 103–104
Additives, 392,438, see also Injectable medications and PN
Aliquot method, 119
liquid-liquid, 131–132
solid-liquid, 136
solid-solid, 119–121
stepwise methods, 122
Alligation alternate, see Concentration, Dilution
Anabolic goal, 420
Anthropometrics, 414
AP (authorized prescriber), 56, 73
Apothecary system, 33, see also English systems
Approximate equivalents, 501
ASPN (American Society for Parenteral and Enteral Nutrition), 413, 419, 421, 425
AW, At.wt. (Atomic weight), 502
Avoirdupois system, 33, see also English systems
Balance, 103
electronic, 109
minimum weighable quantity, 110–111
prescription, Class A, torsion, 110
sensitivity requirement, 110
BEE (Basal energy expenditure), 421, see also PN, Nutritional requirements
Base versus salt or ester forms of drugs, 514–515
Biologics for immunization, 526–527
toxoids and vaccines, 526–527
BMI (Body Mass Index), 414–415 see also Obesity
BSA (Body surface area), 162, 174–178, see also Dosage/Dose
manual calculations, 177
equations, 175
DuBois, 175
Mosteller, 175
Nomograms from DuBois equation, 176
Body weight, 171, see also ABW, IBW
dosing tables/charts, calculations using, 172
Buffer, 517, see also Henderson-Hasselbalch equation
action, 517
capacity, 518
equation for weakly acidic drug, 518
equation for weakly basic drug, 519
isotonic vehicle, 323
molar ratio of components, 520–521
systems, 518–519
Caloric requirement, 420–421, see also BEE, PN
Calorie-to-nitrogen ratio, 435–436, see also PN
Calorimetry, indirect, 421
Capsules, 161, 164, see also Compounding
Carbohydrate, 418, 428, 433
Chemical equation, 340, 355
Chemotherapy, 184–185
Common systems, 500–501, see also English systems
Compounding, 458
calculations, 458
capsules, methods for size selection, 480
The rule of seven, 482–483
The rule of sixes, 480–481
volume occupied by drug, 484
emulsion, primary, 485
4:2:1 calculations, 486
extemporaneous IV fluids, 395
Intravenous admixtures, 392
Lozenges and lollipops, 479
mold calibration, 479–480
non-sterile products, 460
parenteral nutrition, see PN
prescriptions based on single dosage unit, 71
prescriptions based on total quantity, 70
with prefabricated/manufactured dosage forms, 385, 459

© 2017 by John Wiley & Sons, Inc. Published 2017 by John Wiley & Sons, Inc.

531
Compounding (Continued)
sterile products, 463
suppository and other solid dosage forms, calculations, 465
amount of base/powder occupied by drug, 466–
467, 474
density factor in unknown base, 472
density ratio, 474
dosage replacement factor, 475
ratio of densities (drug/base), 474
weight of base displaced using density factor,
470
veterinary products, 487
dosage forms, 488–489
flavors, 489
Concentration, 204, 257, 268, see also Percentage
strength, Ratio strength, Dilution
by adding pure drug, 267, 270, 284
as decimal, 204
as drug content, 204
equation, 204, 258
expressions of, 204, 224, 230
milligrams per deciliter (mg/dL), 231
milligrams per milliliter (mg/mL), 230
milligrams percent (mg%), 231
mmol, mEq and mOsmol per unit of volume,
234
osmolar, 234
parts per billion (ppb), 232
parts per million (ppm), 232
percentage strength (%), 204
ratio strength, 221
by mixing different strengths, 265, 287–288
principles of, 257–258
problem solving methodologies, 260, 268, 272,
275, 283, 293
algebraic using concentration equation and CQ
equation, 275
alligation alternate, 283
algebraic demonstration, 283–284
with more than two products, 287–288
schematic demonstration, 283
CQ equation (Concentration x Quantity
equation), 268
expanded CQ equation, 272
mass balance equation, 260
after reconstitution, see Injectable medications,
Powder volume
Controlled substances, 77–78, 119
CPOE (computerized physician order entry), 58, 73
CQ equation (Concentration x Quantity equation),
see Concentration, Dilution
CSP (Compounded Sterile Product), 458
Cytotoxic agents, see Chemotherapy
DEA (Drug Enforcement Administration), 57
registration number, 57
calculations of, 77–78
Default rules, 208, 224, 230–232

... in percentage strength, 208
in ppm and ppb concentrations, 232
in ratio strength, 224
Density, 142
factors, 467
units, 142
of water, 143
Diluent, 119, 261, 268, 272, 275
Dilution, 255, see also Concentration, Percentage
strength, Ratio strength
by adding inert diluent, 261, 269, 272, 283
of drug concentrate/stock, 293
by mixing different strengths, 265, 272, 284
of powders or solid mixtures, 261
problem solving methodologies, see Concentration
serial, 140
Dimensional analysis, 18
as problem solving method, 19
stepwise approach, 19
Dissociation equation, 344–346, 355–356
Dosage/Dose, 160
abbreviations, 61–67
based on age, 181–182
pediatric, 181–182
geriatric, 181–182
based on body weight, 170–172
based on BSA (body surface area), 162, 174–178
based on unit dosage form, 161
calculations, 160
in chemotherapy, 184–185
directions on product label, 160–161
by drops, 169, see also dropper calibration
of heparin, 391
of insulin, 387–388
regimen, 161–132
Dosage form, 80–81, 164, see also Dosage/Dose
Dropper, 116, 169
calibration of, 116, 503
Drug delivery system, see Dosage form
Dry powders, 80, 378, see also Injectable
medications, Powder volume
as compounding source of drug, 385
as premeasured dose, 80–81
reconstitution of, 378–385
Electrolytes, 428–429, see Electrolyte solutions
Electrolyte solutions, 340
chemical dissociation equation, 344–346, 355–356
equivalent, 344–345
equivalent weight (Eq Wt), 345
milliequivalent (mEq), 347
problem solving methodologies, 348
milliequivalent per milliliter (mEq/mL) and
milliequivalent per liter (mEq/L), 234, 347
millimol(e)(s) [mmmol, mmole], 341–342
equation, 342
mmol/mL, mmol/L, 234, 344
milliosmol(e)(s) [mOsm, mOsmol], 355
problem solving methodologies, 356–363
Electrolyte solutions (Continued)
milliosmol per milliliter (mOsmol/mL) and
milliosmol per liter (mOsmol/L, 234, 355
mol, 341
equation, 341
non-electrolyte, 355
osmol, 354
osmolality, 354
osmolarity (mOsmol/L), 354, 363, 419
osmolar concentration, ideal, USP (mOsm/L), 354
equation, 354
osmolar strength (mOsmol/L), see osmolality
in parenteral nutrition, calculations, 428–430
valence, 342, 344
water of hydration, 355, 357
EMR (electronic medical record), 73
English systems, 33, 35–36, 39–40, 500–501; see
also Common systems
Apothecary system, 33
volume units and equivalents, 39–40, 500–501
weight units and equivalents, 36, 500–501
Avoidupois or Troy, 33
volume units, 39
weight units and equivalents, 35–36, 500–501
Enteral nutrition, 413, 416–418
calculations, nutritional requirements, 417
commercial formulations and characteristics, 417
delivery of, 417–418
Equivalent, see Electrolyte solutions
Equivalent weight (Eq. wt.), 345
Error, 104
absolute, 104
in compounding, maximum tolerable, 110
indication of, 104
based on maximum deviation and significant
figures, 104
based on percentage of estimated value, 107
of parallax, 114
percent of, 111
in prescription writing and dispensing, 12–13,
58–60, 77
prevention by estimation, 10–11
random, 104
systematic, 104
Estimation, 10
metric, 43
power of 10 notation, 8
rounding off, 11
E-values, 313, 315–318, see also Isotonicity, Isotonic
solutions
Exact equivalents, 43
Exponents, 8
Fat emulsion, 418, see also IVFE
FDA (Food and Drug Administration), 459
Five-rights-principle, 59, 160
Flow rate, 397, see also Rate of flow
Formulas, 80
for bulk dosage forms, 81
enlarging, 80–81
using a factor, 81, 84, 88
by parts, 87
calculations of, using a factor, 88
reducing, 80, 83, 85
using a factor, 84, 87
volume occupied by the solids, 83, see also
Powder volume, Injectable medications
with no indication of final yield, 83
for unit dosage form, 81
Fractions, 5, see also Power-of-10, Rounding off
common, 5
decimal, 5–6
Hamwi equation, 420–421, see also TDC and IBW
Harris-Benedict equation, 420–422, see also TDC
Hendersso-Hasselbalch equation, 518–521
Heparin, 391
HLB (hydrophilic lipophilic balance), 511
calculations of, 512–513
Household equivalents, 44–45
Hypercatabolic states, 421, 426
Hypertonic solution, 310, 329, 354
Hypotonic solution, 310, 329, 354
IBW (Ideal Body Weight), 420–421, 444, see also
Hamwi equation
Immunization, 526–527
Immunosuppressants, see Chemotherapy
Indirect calorimetry, 421, see also Nutrition requirements
Injectable medications, 378
electrolytes, see Electrolyte solutions
heparin, 391
insulin, 388, see also Insulin
intravenous (IV) admixtures, 392
intravenous (IV) fluids, 395
rate of flow or flow rate, 397
reconstitution of dry powders, 378–385, see also
Dry powders
as compounding sources of drug, 385
considering powder volume (volume occupied
by solids in solution), 83, 383
with volumes other than the manufacturer, 380
units of potency or activity, 386
Insulin, 386, see also Injectable medications
CSII pumps (continuous subcutaneous insulin
infusion pumps), 388
measurement of combined dose, 389–390
measurement of single dose, 387–388
in parenteral nutrition, 387, 438
pens, 388
Intersystem conversions/relationships, 36, 40–41,
43–45, 500
Ions, 340, 342, 348, 354–356
Isotonicity, 310, see also Isotonic solutions
calculations using E-values, 312–319
colligative properties, 311
determination of, 329
and osmotic pressure, 310
sodium chloride equivalents (E-values),
312–313
Isotonic solutions, 310
buffered, 323
definition, 310
isotonic, hypotonic or hypertonic -determination of, 329
as IV fluids, 354, 363
preparation and calculations, 312–327
of specific volume using 1 g drug, 312, 329
using freezing point depression/cryoscopic method, 326–327
using ingredient already isotonic, 321
using isotonic buffer solution, 323
Martin-Sprowl method, 323, 326
White-Vincent method, 323–324
using other toxicity agents, 319
using sodium chloride equivalents (E values), 312
Method 1, 315
Method 2, 318
USP method, 329
to prevent irritation and cell destruction, 311
as vehicle, 323–324
IU (International units), 13, 386, 391
IV (intravenous), 392, see also Injectable medications
IV (intravenous) admixtures, 392, see also Injectable medications
IV (intravenous) fluids, 395, see also Injectable medications
IVFE (intravenous fat emulsion), 418, 428, 433
IV (intravenous) infusion, 397
kcal (kilocalorie), 420
Legend drugs, 55
Lozenges and lollipops, 479–480
Macronutrient, 418, 429–430
Micronutrient, 428–429
Malnutrition, 416, see also Nutritional requirements
Mass balance equation, 260, see also Concentration, problem solving methodologies
Measurements, 33, 38, 41, 103, see also Measuring errors, maximum, 2, 103
of length, 41
of volume, 38, see also Metric system, English systems
of weight, 33–36, see also Metric system, English systems
Measuring, 103, 109, 114
effect of viscosity, 114–116
error of parallax, 114
use of meniscus, 114
volumetric devices, 114
graduates, 114

mEq (milliequivalents), see Electrolyte solutions
Metric estimation, 44–45
Metric system, 32, 500–501, see also Measurements computations, general guidelines, 32
decimal notation base, 32
household equivalents, 44–45
metric length and equivalents, 41, 500–501
metric volume and equivalents, 38–39, 500–501
metric weight and equivalents, 33, 36, 500–501
Metrology, 31
mg% (milligrams percent), 231
mg/dL (milligrams per deciliter), 231
mg/mL (milligrams per milliliter), 230
mmol(e) [millimol(e)], see Electrolyte solutions
mOsmol, mOsm (milliosmol), see Electrolyte solutions
molecular weight (MW), 341–342, 502
multivitamins, 418, 429, 445
MWQ (minimum weighable quantity), 110–111
NABP (National Association of Boards of Pharmacy), 57–58
Nomogram, 176, 421, see also BSA
Non-electrolyte, 355
Normal concentration, 524
Normality, 524
NS (normal saline), 310, 354, see also Injectable medications, Electrolyte solutions
Nutrition screening, 414
Nutritional requirements, 420, see also PN assessment, 414, 416
calculations of, 420–429
carbohydrate and fat (non-nitrogen), 428, 433
calories (energy), 420–421
conversions for calculations of, 430
fluid, 425
macronutrients, 418
micronutrients, 428–429
protein (nitrogen), 425–426, 435
Nutrition support, 413
Obesity, 414, see also BMI associated disease risks, 414
BMI (body mass index), 414–415
waist circumference, 414
Ointment, 81
Osmolality, see Electrolyte solutions
Osmolar concentration (mOsmol/L), see Electrolyte solutions
Osmolarity, see Electrolyte solutions
Osmolar strength (mOsmol/L), see Electrolyte solutions
Osmotic pressure, 310, 354
OTC or O-T-C (over-the-counter) drugs, 55
Particles, 355–356
Parts, 87, see also Formulas
  in alligation method, 283
  in formulas, 87
  in percentage, 204
  in ppm and ppb, 232
  in a ratio, 224
Percentage (%), 107–108, 204
Percentage strength (%), 204, see also Concentration, Dilution
  calculation of amount of solvent using sp.gr., 215
  conversion to ratio strength, 224–227
  conversion %w/w into w/v using sp.gr., 217
  as decimal or fraction, 204
  default rules, 208
  expressions of, 204–206
  prescription ingredients listed as, 208
  stock solutions, 218, 293
  volume in volume (v/v), 204
  weight in volume (w/v), 206–207
  weight in weight (w/w), 204
pH, 517–521
  hydrogen ion concentration, 518, see also Henderson-Hasselbalch equation
Phosphorus/Phosphate, 430, 502
  added to PN, 430
Pipet, pipette, 115
PN (Parenteral Nutrition), 418, 504, see also Nutritional requirements, Injectable medications, Units
  addition of insulin R to, 387, 438
  administration, 419
  components of, 418, 429, 504
  solutions used to obtain, 504
  compounding calculations, 429
  of electrolytes, 430
  of protein (nitrogen calories), 425–426, 435
  of grams of protein and grams of nitrogen, 435
  of carbohydrate and fat (non-nitrogen calories), 428, 433
  of other additives, 438
CPN (central parenteral nutrition), 419
  design of, calculations, 444–446
  2-in-1-formulations, 418
  3-in-1 formulations, 418
  indications of, 418
  nutritional requirements, calculations, see Nutritional requirements
  osmolality of, 419
  equation for calculations of, 419
  preparation of, 429–430
  physician’s orders, 419
  standard, 419
tailored, 419, 429
PPN (peripheral parenteral nutrition), 419
tapering off, 505
TNA (total nutrition admixture), 418
Powder volume or bulk, 80, 378, 383, 484
