**a**

Actinomycetes, compost as a food base 130
aerated floors, raw materials, compost as a food base 136–138, 143–144
after care, cultivation/production 294–295
Agaricus bisporus
  see also bag/block system, Agaricus bisporus
  amino acids content 477, 479
  anti-inflammatory activity 493
  antimicrobial properties 486
  bag/block system 175–194
  basidia types 40–41
  bioremediation 429, 430
  bruising sensitivity 50
  BSN gene 52
  cap color 49–50
casing 144, 145, 149–163, 186–194, 214–216
  chemical mutagens 45
  compost as a food base 129–147, 211–220
  compost discard 219
cultivation cycle management 216–217
desired traits 48–51
di-mon mating 57
direct selection 59
direct selection of natural variants 43
disease management 434
disease resistance 50–51
distribution 41–42
economically important traits 48–51
environmental management 217–218
fatty acids content 462
food for animals and fish 433
fruiting 149–151
genetic aspects/strategies, hybrids 36–60
genetic manipulation: transformation 58
genetic parameters 47
genome analysis 47–48
germplasm collection 42
growing rooms 216–217
growth rate and downward linear growth on compost 51–52
harvesting 3, 91, 102, 184, 191–192, 194, 205–208, 217–219
historical context 36–37
homokaryons 51–58
hybridization, exploiting variability through 45–48
hybridization, resistance markers 53–54
hybridization impeding factors 38–39
hybridization: intermating of homokaryons/heterokaryons 53–58
hybridization using auxotrophs as markers 54–56
hybrids, genetic aspects/strategies 36–60
identification 51–53
ionizing radiation 45
isoenzyme/molecular markers 58
isoenzymes 48
life cycles 39–41
Marker-Assisted Selection (MAS) 59
mating systems 39–41
micromanipulation 51
multispore cultures 44
mutations 45
new technology 211–220
nutritional composition 342
parental strain identification 48–51
pest management 433–434
price comparison 377
production 51–53, 217–218
Agaricus bisporus (contd.)

protoplast methods 52–53
randomly amplified polydisperse DNA sequences (RAPDs) 48, 52, 54
renewable energy 434
reproductive biology 37–41
restriction fragment length polymorphisms (RFLPs) 48, 52
ruffling 159–160, 215
selection 59–60
selection by rejection 59, 60
sex determination 39
single spore isolates 44–45, 51
somatic hybridization/protoplast fusion 56
spent mushroom substrate (SMS) 429, 430, 431, 432, 433–434
strain mixing 45
sugars content 468
supplementation 213
technology 211–220
temperature tolerance 51
tetrasporic basidia 52
tissue culture 43–45
trays 213–214
variability 41–48
variability, exploiting 45–48
variability, natural 42–43
variability, utilizing 43–45
yield and fruit morphology 49
Agaricus bisporus brown 305–307
airing/pinhead formation/cropping 307
casing 306–307
composting procedure 305–306
harvesting 307
phase II 306
raw materials used 305
spawning 306
spawn run 306
Agaricus blazei
see also Agaricus brasiliensis
nomenclature 513
Agaricus brasiliensis 423
amphithallism 22–24
antitumor properties 490
bioremediation 430
spent mushroom substrate (SMS) 430
Agaricus spp.

amino acids content 477
antimicrobial properties 486

nomenclature 512
Pleurotus ostreatus (Oyster Mushroom, Hiratake) 298–299
amino acids content 478, 480
antimicrobial properties 488
biotechnology 355
brown blotch 352–353
chemical composition 460
cultivation 342–356
delayed-release nutrients 347
diseases 351–355
dry bubble 352
future challenges 355–356
gall midges/cecid flies 354–355
green mold disease 351–352
harvesting 328, 350–351
incubation 349
inoculation 328, 349
nutritional composition 342, 460
pests 351–355
phorid flies 354
pink mold 353
plastic bottles and small bags cultivation 327–328
price comparison 377
primordia formation 349–350
purchase from specialized suppliers 344
scarids 353–354
spawn 344–345
spawn purchase 344
spawn run 328
spent mushroom substrate (SMS) 351
spore isolation 343–344
springtails (Colembola) 355
strains (cultures) 343–344
substrate 345–347
substrate and filling 327–328
substrate packing 348
substrate pasteurization 347
substrate preparation 347–348
sugars content 470
tissue isolation 343
viral diseases 355
Pleurotus sajor-caju 296–298
Pleurotus spp. 339–342
amino acids content 478, 480
antimicrobial properties 487
antitumor properties 491
bioactive molecules 72
bioremediation 429, 430
biotechnology 355
characteristics 340–341
chemical composition 460
chemical tolerance 72
combing ability 64–65
common or commercial names 340–341
desired traits 69–72
di-mon mating 68
disease management 434
economically important traits 69–72
as edible fungi 339
environmental bioremediation 72
fatty acids content 466
fitness 29
food for animals 433
future challenges 355–356
genetic aspects/strategies, hybrids 60–72
genetic engineering 72
genetic parameters 64–65
genetic transformation 69
genetic variability 62–64
germlasm collection 62
heritability 64–65
heterosis 64–65
hybridization 65–69
hybridization: conventional breeding 65–67
hybrids, genetic aspects/strategies 60–72
interspecific hybridization 66–67
inter-strain/intra-specific hybridization 65–66
intra-strain hybridization 65
non-conventional breeding 68–69
nutritional composition 342, 460
protoplast fusion 67–68
as recyclers 339–342
reproductive biology 61–62
spent mushroom substrate (SMS) 427, 429, 430, 433
sporelessness 70–71
statistics 5, 8–9
substrates for cultivation 340–341
sugars content 470
temperature range 71–72
trace metals content 473, 475
white sporophores 72
yield 69–70
poliomyelitis effects, medicinal mushrooms (MM) 528
polyphenol oxidase enzymes (PPO), browning 263
Polyporus tenuiculus 419, 420, 421
polysaccharides, Ganoderma lucidum 405
porcini mushroom see Boletus spp.
portobello brown mushroom 305–307
post-harvest handling, Pleurotus eryngii (King Oyster) 301
post-harvest handling and marketing in India, gray oyster mushroom 298
post-harvesting and marketing, Sun mushroom 373–375
post-harvest storing conditions 262–263
PPO see polyphenol oxidase enzymes
preclinical-clinical scaling, medicinal mushrooms (MM) 532
price comparison
Agaricus bisporus 377
Lentinula edodes (Shiitake) 377
Pleurotus ostreatus (Oyster Mushroom, Hiratake) 377
Sun mushroom 377
primordia formation
Lentinula edodes (Shiitake) 331
Pleurotus ostreatus (Oyster Mushroom, Hiratake) 349–350
processed materials, casing 154, 155–156
processing mushrooms see also harvesting
canning mushrooms 268
washing mushrooms 267–268
product flow, mother spawn 112–114
production see also cultivation/production; harvesting; spawn production
Agaricus bisporus 51–53, 217–218
decline in production of mycorrhizal mushrooms in the Northern hemisphere 28
homokaryons 51–53
overview 5–12
statistics 5–12, 35–36, 427
Tuber spp. 415–416
production process facilities, Sun mushroom 370–371
production pyramid, spawn production 91–92
protein content, mushrooms 456, 457–461
protoplast fusion, Pleurotus spp. 67–68
protoplast fusion for breeding, Ganoderma lucidum 398–399
protoplast methods
Agaricus bisporus 52–53
homokaryons 52–53
Pseudomonas putida 130
Pseudomonas reactans, bacterial disease 253–254
Pseudomonas spp., bacterial diseases 337
Pseudomonas tolasi 130
bacterial disease 253–254
pyremotid mites 230–231
chemical management 231
damage 230
pyemotid mites (contd.)
  identification 230
  life history 230–231
  management strategies 231

r
radiation treatment, spawn
  production 122
randomly amplified polydisperse DNA sequences (RAPDs)
  Agaricus bisporus 48, 52, 54
  homokaryons 52
RAPD see randomly amplified polydisperse DNA sequences
raw materials, compost as a food base 131–138
  aerated floors 136–138, 143
  carbohydrate raw materials 131
  fermentation systems 136
  mixing/mixing systems 134–136
  nitrogen raw materials 131
  preparation 132–138
  prewetting 132–134
raw materials used, Agaricus bisporus brown 305
re-casing, casing 162–163
red pepper mites see pyemotid mites
regulation issue, medicinal mushrooms (MM) 520–521
“Reishi” see Ganoderma lucidum
relative humidity (RH), harvesting 263–264
renewable energy
  Agaricus bisporus 434
  spent mushroom substrate (SMS) 434
reproductive biology
  Agaricus bisporus 37–41
  Pleurotus spp. 61–62
respiratory effects, medicinal mushrooms (MM) 529
restitution, Lentinula edodes (Shiitake) 333
restrictions (Yokusei), Flammulina velutipes (Enokitake) 321
restriction fragment length polymorphisms (RFLPs)
  Agaricus bisporus 48, 52
  homokaryons 52
re-supplementing, casing 162–163
reuse in casing material, spent mushroom substrate (SMS) 432
reuse in mushroom cultivation, spent mushroom substrate (SMS) 432–433
reuse of casing 158–159, 432
RFLP see restriction fragment length polymorphisms
RH see relative humidity
ruffling
  Agaricus bisporus 159–160, 215
casing 159–160, 215
safety
  dietary supplements 508–511, 514–515
  medicinal mushrooms (MM) 508–511, 514–515
Salmonella spp., washing
  mushrooms 267–268
sandwich technique, casing 163
saprobic species, naturally occurring strains of edible mushrooms 415–416
saprophytic nematodes 232–233
  causal agents 232
  disease cycle 232
  epidemiology 232
  management strategies 233
  symptoms and signs 232
satellite system, bag/block system, Agaricus bisporus 176
scarids, Pleurotus ostreatus (Oyster Mushroom, Hiratake) 353–354
scratching (kinkaki) in bottle cultivation, plastic bottles and small bags
  cultivation 317, 318
scratching and growing
  Hypsizygus marmoreus (Buna-shimeji) 323–324
  Pleurotus eryngii (King Oyster) 325–326
scratching and sprouting, Flammulina velutipes (Enokitake) 320
secondary metabolites, medicinal mushrooms (MM) 516
selection, Agaricus bisporus 59–60
selection by rejection, Agaricus bisporus 59, 60
selective breeding, Ganoderma lucidum 397
sex determination, Agaricus bisporus 39
sexual reproduction 15, 16–17
shiitake mushrooms see Lentinula spp.
silicosis effects, medicinal mushrooms (MM) 529
single spore isolates
  *Agaricus bisporus* 44–45, 51
homokaryons 51
site selection, farm design 272–273
SMS see spent mushroom substrate
soil
  bioremediation 430
  spent mushroom substrate (SMS) 430
soil amendment/fertilizer, spent mushroom substrate (SMS) 432
solid-state fermentation (SSF), *Ganoderma lucidum* 391–392, 396
somatic hybridization/protoplast fusion,
  *Agaricus bisporus* 56
spawn
  *Pleurotus ostreatus* (Oyster Mushroom, Hiratake) 344–345
terminology 91
spawning
  *Agaricus bisporus* brown 306
  bag/block system, *Agaricus bisporus* 178–186
  compost as a food base 144–147
  composting procedure 291
  gray oyster mushroom 297
  *Pleurotus eryngii* (King Oyster) 300–301
  Sun mushroom 368
spawn production 89–128
  agar production 107
  chemical treatment 120
  conservation 127–128
  cooling 104–105
  deep freezing 103–104
  disinfection 116–122
  failure risk 89–90
  filtration 120–121
  grain/sawdust spawn grown in small bags 92–94
  grain spawn in bottles or jars 92, 101
  grain spawn in large bags 92, 94–98
  heat treatment 116–119
  hygiene rules 112–116
  incubation 123–126
  liquefied spawn 92, 101
  liquid spawn in fermenters 92, 99–100
  mother cultures 107–114
  mother spawn 107–114
mushroom production pyramid 91–92
radiation treatment 122
spawn industry 89–90
spore syringes 92
sterilization 116–122
strain preservation and
  degeneration 102–106
  strain refreshment 105–106
  strain selection 101–102
  subculturing 105, 107–109
  substrate composition 122–123
  Sun mushroom 363–364
  techniques 92–101
terminology 90–91
transport 127–128
UV treatment 121–122
spawn purchase, *Pleurotus ostreatus* (Oyster Mushroom, Hiratake) 344
spawn run
  *Agaricus bisporus* brown 306
  composting procedure 291
  *Flammulina velutipes* (Enokitake) 320
  *Ganoderma lucidum* 400–401
  gray oyster mushroom 297
  *Grifola frondosa* (Maitake) 329–330
  *Hypsizygus marmoreus* (Buna-shimeji) 323
  *Lentinula edodes* (Shiitake) 331
  *Pholiota namako* (Nameko) 327
  *Pleurotus eryngii* (King Oyster) 300–301, 325
  *Pleurotus ostreatus* (Oyster Mushroom, Hiratake) 328
spawn run (incubation), plastic bottles and small bags cultivation 317
spawns preparation, *Ganoderma lucidum* 394
spawn unit, farm design 279–280
specialty mushrooms 295–307
  black ear mushroom 302
  black oyster mushroom 298–299
  buna shimeji mushroom 302, 303
  cultivation/production 295–307
  enoki mushroom 304–305
  gray oyster mushroom 296–298
  *Lentinula edodes* (Shiitake) 303
  milky mushroom 303–304
  paddy straw mushroom 304
  pink oyster mushroom 299, 300
  *Pleurotus eryngii* (King Oyster) 300–301
  portobello brown mushroom 305–307
  yellow oyster mushroom 299, 300
spent mushroom substrate (SMS)

Agaricus bisporus 429, 430, 431, 432, 433–434

Agaricus brasiliensis 430

Agaricus spp. 429, 430, 431

air remediation 429

aquaculture 433

bioremediation 429–430

characteristics 428–429

Coprinus fimetarius 433

crop production 431–432

disease management 434

field crops 431

food for animals and fish 433

Ganoderma lucidum 429–430

greenhouse crops 431

Lentinula edodes (Shiitake) 427–428, 429, 430, 431, 433

nursery and landscape 432

pesticides remediation 430

pest management 433–434

Pleurotus ostreatus (Oyster Mushroom, Hiratake) 351

Pleurotus spp. 427, 429, 430, 433

renewable energy 434

reuse in casing material 432

reuse in mushroom cultivation 432–433

soil amendment/fertilizer 432

soil remediation 430

substrate 432–433

Sun mushroom 382

uses 427–435

Volvariella volvacea 433

water remediation 429–430

sporelessnes, Pleurotus spp. 70–71

spore syringes, spawn production 92

springtails (Colembola), Pleurotus ostreatus (Oyster Mushroom, Hiratake) 355

SSF see solid-state fermentation

stacking, bag/block system, Agaricus bisporus 184–186

standardization

dietary supplements 508–511, 514–515

medicinal mushrooms (MM) 508–511, 514–515

statistics

Agaricus spp. 5, 10–11, 35–36
