Saccharomyces cervisiae, 196–7
Saccharomyces cerevisiae, 214–15
salami, 278
Salmonella spp., 20, 54, 121, 123, 134, 157, 215, 259
salt, 225
salts, 74–5
saturated fatty acids (SFA), 314
seafood products, 73
serum protein (SP), removal, 13–14
shelf life, 205
shelf life extension, 128–30
Sherwood number, 11
Sievecorp, Inc., 23
sodium, 318
solid phase microextraction (SPME), 136
somatic cells, 225
sonication see ultrasound
sonotrodes, 151
sonocrystallization, 159–61
sour cream, 234
soya milk, 132, 137–8
Sphingomonas spp., 17
square-wave pulses, 116–17, 118
Staphylococcus spp., 189, 224
Staphylococcus aureus, 119, 121, 122, 124, 157, 197, 215, 219–20, 222, 283, 312
Staphylococcus saprophyticus, 216
starch, 225
Streptococcus lactis, 121
Streptococcus pyogenes, 312
Streptococcus spp., 224
Streptococcus thermophilus, 57, 234, 269, 275, 312
structure/function claims, 310–11
sugar, 226
sugar syrup, 199
supercritical carbon dioxide, 206–7, 211, 235
SurePure tubular UV module, 186–7, 186, 191
surface disinfection, 192
Taylor–Couette reactor, 186, 186
Tetra Pak Ultima process, 16
thermal processing, 33–4, 34
bacteriocins and, 279–80, 281–5
canned milk sterilization, 34
evaporation and concentration, 34
heat treatment for yoghurt, 35
heating before powder production, 35
microwave heating see microwave heating
cold spot identification, 56–7
microwave heating, 42–54
ohmic heating see ohmic heating
preheating, 34
radiofrequency heating see radiofrequency heating
spray dryer heating, 35
ultra high temperature, 34
thermosonication, 125
microlasinactivation, 156–7
thiamin, 316
thiols, 54
trans fatty acids, 52
transglutaminase, 83
transmembrane permeation (TMP), 2
triglycerides, 235
Trojan UV Technologies Inc, 186
turbidity, 182
turbulent flow, 96, 185
ultra high temperature (UHT) milk, 15, 129
ultrafiltration (UF), 1, 3
film theory model, 10
ultrasound-assisted, 157–9
ultrapasteurized milk, 15
ultrasound, 149–50
airborne sonication, 151
applications, 150
casein micelle, 163–4
creaming, 155
degassing and foam reduction, 155–6
direct contact sonication, 151
effect on sensory characteristics, 172–3
enzymes, 157
equipment, 151
filtration, 157–9
homogenization, 152–5
lactose sonocrystallization, 159–61
microlasinactivation, 156–7
INDEX

milk concentrate viscosity, 164–7
powder rehydration, 161–2
whey proteins
  chemical effects, 169
  heat stability, 169–72
  rheological properties, 168–9
ultraviolet (UV) treatment, 181–2
  absorption coefficient, 184
  advantages, 182
  applications, 183
  commercial developments, 192–4
  dose determination, 187
  issues, 183
  microbial inactivation, 182, 193
  mechanisms of action, 188–9
  packaging and surface disinfection, 192
  process overview, 183–5
  pulsed light see pulsed light technology
pulsed light, 194, 196–9
  advantages, 194
  commercial developments, 199
  principles of operation, 195
  treatment systems, 184–5
  coiled tube reactors, 185, 190
water, 194
uniform transmembrane pressure (UTP), 5, 13
US Department of Agriculture (USDA), 308

vaccenic acid, 319
vegetables, 73
viscosity control, 164–6
viscosity, 226, 8
vitamins, 128, 136, 229–30, 261, 315, 231
  fat-soluble, 314–16
  K, 316
water-soluble, 316–17
volume concentration reduction (VCR), 7

water, 41
  dipole rotation, 43
Wek-Tek, 194
Westfalia Separator Group, 15–16
whey proteins
  carbon dioxide treatment and, 225
  fractionation, 237–9
  concentrate (WPC), 162
  high-pressure homogenization, 100–1, 102
  high-pressure treatment, 75–6
  isolate (WPI), 235
  microwave heating, 52–3
  pulsed light treatment, 198–9
  sonication
    chemical effects, 169
    gelation and viscosity, 167–8
    heat stability, 169–72
whey solutions
  concentration, 2, 13–14
  gel formation ability, 51
  heating, 41

Yersinia enterocolitica, 216, 228
yoghurt
  beverages, 138
  carbon dioxide, 233
  high-pressure homogenization, 104–5
  high-pressure processing, 83
  pulsed electric field, 138
  thermal processing, 35

zinc, 318
Zygosaccharomyces bailii, 216
