**Index**

Note: Page numbers in *italic* denote figures and tables, where outside page ranges.

α-relaxation, supercooled liquids 5–8  
α-synuclein, isothermal titration calorimetry (ITC) 350, 353 
β-conglycinin (7S) soy protein, high-pressure processing (HPP) 66–67 
β-lactoglobulin, high-pressure processing (HPP) 68–69 
β-lactoglobulin-chitosan isothermal titration calorimetry (ITC) 354 

α-absicisic acid signaling pathway, differential scanning fluorimetry (DSF) 368  
amyloid protein 51 
plasticizers 163 
protein misfolding 349–351, 353 
ANNs see artificial neural networks 
anthrax protein protective antigen unfolding, differential scanning fluorimetry (DSF) 367 
applications 
differential scanning calorimetry (DSC) 328–339 
differential scanning fluorimetry (DSF) 363, 365–369 
isothermal titration calorimetry (ITC) 348–358 
plolyactides (PLA) 261 
state diagrams 256–258 

Arrhenius equation 5–8  
reaction kinetics 37–38  
temperature dependence 37–38 
artificial neural networks (ANNS), spray drying 243 
aspartyl transcarbamoylase (cər, 310 kDa), differential scanning calorimetry (DSC) 327, 336 
Avrami equation 
crystal-melt phase change 131–132 
isothermal crystallization 186–190 
non-isothermal crystallization kinetics 191–193 

b 
berry powders, glass transition 43 
BET-monolayer line, state diagrams 255–258 
biopolymer films, plasticizers 159–176 
biopolymer glasses 207 
biopolymers 
see also individual biopolymers 
crystal-melt phase change 119–134 
differential scanning calorimetry (DSC) 149–151 
relaxation properties 1–24 
relaxation techniques 141–154 
thermal properties 1–24, 141–154 
blackberry powder, glass transition 43 
blueberry powder, glass transition 43
bovine pancreatic trypsin inhibitor (BPTI),
differential scanning calorimetry (DSC) 329, 335
bovine serum albumin (BSA), high-pressure processing (HPP) 64–65, 96–98
BPTI see bovine pancreatic trypsin inhibitor
BSA see bovine serum albumin

C

caking
glass transition 241–242
spray drying 241–242
sugar solutions/sugar-rich food 241–242
canola preparations, differential scanning calorimetry (DSC) 340
carbohydrates
dehydration/dried foods 226–227
glass transition 226–227
Carr-Purcell-Meiboom-Gill (CPMG) pulse sequence, nuclear magnetic resonance (NMR) 144
casein
dynamic thermo-mechanical analysis (DMA) 153
nuclear magnetic resonance (NMR) 142–143
relaxation techniques 142–143, 153
cereal-based starch, starch pasting properties 432
chestnut flour, starch pasting properties 442–445, 446–448
chitosan
properties 282
structure 282
thermal properties 281–283, 290, 293–298
thermogravimetric analysis (TGA) 296
chitosan - β-lactoglobulin
isothermal titration calorimetry (ITC) 354
protein-small molecule interaction 354
chocolate
crystallization 199–201
polymorphism 199–201
Clausius-Claperyron equation,
high-pressure freezing (HPF) 396–397
cocoa butter, polymorphism 199–201
collapse phenomena
Deborah number 234
dehydration/dried foods 234–235
glass transition 234–235
competitive/displacement ITC, isothermal titration calorimetry (ITC) 359–361
competitive metal capture
isothermal titration calorimetry (ITC) 353–354
confined aqueous solutions, Gordon Taylor (GT) equation 18–24
continuous ITC, isothermal titration calorimetry (ITC) 361–362
controlling crystallization in food products (influencing factors), crystallization 194
corn starch, starch pasting properties 434
coupling theory, high solid biomaterials 75–76
CPMG see Carr-Purcell-Meiboom-Gill pulse sequence
crosslinking in proteins, high-pressure processing (HPP) 59–60
crystal growth 183–184
crystal-melt phase change 130–131
crystallization 183–203
chocolate 199–201
controlling crystallization in food products (influencing factors) 194
crystal growth 183–184
crystallization kinetics 131, 185–186
crystal-melt phase change 126–130
food 194
honey 197–199
ice-cream 194–197
isothermal crystallization 186–190
lipid crystallization 201–202
non-isothermal crystallization kinetics 190–193
nucleation 183–184
Ozawa model 193
polymorphism 185, 199–201
shape of crystals 184–185
crystallization kinetics 185–186
crystal-melt phase change 131
crystal melting, crystal-melt phase change 131–133
crystal-melt phase change 119–134
Avrami equation 131–132
biopolymers 119–134
classification, phase transitions 124–126
crystal growth 130–131
crystallization 126–130
crystallization kinetics 131
crystal melting 131–133
food 119–134
heterogeneous nucleation 129–130
homogeneous nucleation 127–129
melting 126–130
morphology 126–130, 131–133
phase diagram 122–124
phase equilibrium 120–122
phases 120
phase transitions 120
stability 120–122
thermodynamics 120–124
water role 124
‘c’ value, isothermal titration calorimetry (ITC) 343, 346–347
cytochrome c (iso-1 form), differential scanning calorimetry (DSC) 335
glass transition 225–239
lips 228
powder stickiness 233–234
proteins 227–228
reaction rates 235
solids 232–235
structural relaxations 229–232
sugar solutions/sugar-rich food 226–227
thermal plasticization 229–231
Vogel–Fulcher–Tammann (VFT) equation 226, 229
water plasticization 229–231
Williams–Landel–Ferry (WLF) equation 226, 229, 231–232
denaturation, globular proteins 50, 51
denatured protein and heat capacity, differential scanning calorimetry (DSC) 323
deposition
glass transition 241–242
spray drying 241–242
sugar solutions/sugar-rich food 241–242
devolution theory, differential scanning calorimetry (DSC) 322
dielectric spectroscopy
relaxation technique 146–149
yellow–locust pure honey 146–147
differential scanning calorimetry (DSC) 306–341
analysis of DSC data 309–320
application of structural thermodynamics concepts 323–325
applications 328–339
aspartyl transcarbamoylase ($\epsilon_d r_0$, 310 kDa) 327, 336
biopolymers 149–151
bovine pancreatic trypsin inhibitor (BPTI) 329, 335
characteristics 307
cytochrome c (iso-1 form) 335
definitions 307
denaturation of mutant forms of proteins 337–339
dairy ingredients, glass transition 41–42
dairy products, high-pressure thawing (HPT) 417–418
Deborah number
collapse phenomena 234
dehydration/dried foods 234
dehydration/dried foods 225–239
carbohydrates 226–227
collapse phenomena 234–235
Deborah number 234
glass formers 231–232
differential scanning calorimetry (DSC) (contd.)
denatured protein and heat capacity 323
devolution theory 322
tenhalpy change 324
tenropy change 324–325
excess heat capacity function 320–321
folding mechanism prediction 328–331
food proteins studies 339–340
future perspective of DSC analysis 341
Gibbs free energy 311, 320
irreversible processes 327
native protein and heat capacity 323–324
non two-state denaturation 335–337
non two-state transitions 316–320, 326–327
numerical consideration for
non-two-state processes 326–327
numerical consideration for two-state
processes 325–326
numerical investigation on irreversible
processes 327
numerical treatment of DSC data
325–327
overall thermodynamic parameters
321–323
parameter-setting 309
prediction of folding mechanism
328–331
protein characterization 306–341
pumpkin flour 150
relaxation technique 149–151
rice bran proteins, yeast fermented 340
soyabean 340
soybean (SPI) and cornstarch (CS)
mixture 340
stability analysis 331–332
studies on thermal denaturation 328
sweet potato puree–based baby food
149–150
technique 308–309
two-state denaturation 333–335
two-state denaturation of protein-ligand
complex 333–334
two-state denaturation with a permanent
change in the heat capacity 334–335
two-state denaturation with
self-association or dissociation 333
two-state transition 309–313, 325–326
two-state transition with a permanent
change in the heat capacity 313–316
van’t Hoff equation 309, 312–313, 318, 325, 326, 327
differential scanning fluorimetry (DSF)
363–369
abscisic acid signaling pathway 368
anthrax protein protective antigen
unfolding 367
applications 363, 365–369
buffer composition effect 365
principle 363–364
problems 366–367
protein characterization 363–369
protein quantification 366
protein roles 369
protein-small molecule interaction
367–368
protein stability characterization
365–369
real-time PCR system 364, 366–367
differential thermal analysis (DTA), protein
characterization 370–371
DMA see dynamic thermo-mechanical
analysis
dough development, hydrated gluten
networks 219
dried foods see dehydration/dried foods
drying effect, starch pasting properties
442–445
DSC see differential scanning calorimetry
DSF see differential scanning fluorimetry
DTA see differential thermal analysis
